NO VAPOR-LOCK to mar your trip : : : It's

AROTANE FOR ACTION
DUAL OCTANE QUALITY GASOLINE

★ Some of your finest pleasure trips will take you through desert and mountain country, where vapor-lock is most likely to strike. Vapor-lock occurs when "wild" gaseous fractions in gasoline vaporize in the fuel line. Back pressure is created which blocks the flow of gasoline to the carburetor. The engine stalls and cannot be re-started until the vapor cools and becomes liquid again.

These overly volatile elements that cause vapor-lock are not present in AROTANE. Associated's record-size fluid catalytic cracking unit makes possible volume production of high octane gasoline components with correct volatility characteristics. It makes unnecessary the inclusion of elements either too heavy or too light for perfect performance under all driving conditions.

AROTANE's Dual Octane Quality and controlled volatility eliminate vapor-lock, and give you instant starting, full and uniform power, smooth, fast acceleration at all speeds, and surprisingly long mileage. Yet AROTANE costs you no more than other premium gasolines — at Friendly Associated Dealers throughout the West.
