Salem Woman's club is planning a benefit bridge and pinocle party for the afternoon of February 14, at the clubhouse. All those interested in securing tickets may contact Mrs. David Wright, who has charge of tables.

These supplies may be brought to the clubhouse at the next meeting, where they will be packed and shipped to the proper headquarters for distribution.

New members received into the club included Mrs. J. S. Murray, Mrs. Agnes Booth, Mrs. R. L. Ellstrom, Mrs. Ray Stumbo, and Mrs. Clarence Wilson.

Lesher was guest speaker and showed motion pictures of life in Alaska and the islands along the coast. Mrs. Lesher also had on display two tables of art objects and articles

Cold Comfort

Ideal Home Refrigerator Should Have Space, Frozen Food, Ice, Vegetables

By Maxine Buren
Women's Editor, The Statesman

We have felt for some time that designers have forgotten the real purpose of the home electric refrigerator, which is to store foods in the home. Looking at samples of various machines not long ago, we detected a trend toward furnishing the heavy drinker with

down-to-earth home refrigerator. It's to go into production soon.

One compartment, the Freeze Chest, holds 43 pounds of frozen food or one and a quarter cubic feet of space. It is refrigerated on four sides and can be used for a limited amount of freezing and for its primary job, frozen food storage.

The second freezing compartment holds 13 pounds, or four-tenths cubic foot. There are four trays for ice cubes.

There are two freezing controls, one is manually operated, the other automatic.

In the main compartment there are two large vegetable crispers with glass covers that hold one-half bushel of vegetables and fruits.

This sounds like the ideal machine for the woman who, within the past few years, has changed her way of food preservation from entirely canned, to at least half frozen and who now faces the problem of working out a practical and not too expensive method of storing it.

With a sensational rise in the amount of foods frozen by the housewife of this area, she needs storage space for some of that frozen food—even if ice must be limited to two or so trays.

Now to me, the big need is a refrigerator with space to keep enough frozen food to last the family one to two weeks. For does it not seem economy to have a food locker in a commercial plant at \$7.50 to \$9 a year for storing bulk of the food, and a home unit within the regular refrigerator to hold that for immediate use? If the family has a surplus \$1300 to \$1500, a home plant would be ideal but for the average, one machine must suffice.

One manufacturer, probably having waited until the housewife forgot the fabulous promises for the "post war world," now comes up with what seems a

idea to see a Doctor. If perhaps he gives you one of those decorated pieces of paper—well, you know, this is a "Reliable Prescriptions" Pharmacy. We'll fill it promptly and precisely.
