Rates on Bonneville Power

When the stir arose a few weeks ago over reported demands for higher power rates by Bonneville administration, The Statesman remarked that it was not clear who was behind itwhether it was the private utilities putting a squeeze on Bonneville, as was alleged, or whether Bonneville was doing a "wolf, wolf" act

The Bend Bulletin, whose editor is in close touch with movements affecting reclamation and power development as president of the National Reclamation association, puts the finger on Bonneville, and says that the hidden issue is over the question of the repayment of construction costs to the federal treasury. To quote:

The fundamental issue is the matter of the opinion given the secretary of the interior on Sept. 29, 1933 (should be 1944ed) by the department's solicitor, Fowler Harper. Widely known in reclamation circles and in the interior department itself as the "soncitor's opinion," without further identification, its soundness, its force, its validity are the true questions. Should congress approve or reject the opinion?

Congressional approval is what Paul Raver wants. . . Those who believe that congress should reject the opinion do so on grounds other than the effect, if any, the rejection would have on Bonnesille rates.

The solicitor's opinion is an interpretation of section nine of the reclamation project act of 1939. It has to do with rate structures for the sale of power produced at reclamation project dams. Those who wrote that 1939 law intended to provide for the repayment of the power investment with interest in 50 years. They intended that rates should be set at a figure that would that result. The solicitor's opinion developed a new rule which, if followed, would mean that power rates need be no higher than will produce a three per cent annual return plus simual maintenance expense. In other words the rates need not be high enough to amortize the investment in the normal fashion. If the opinion were followed, whenever the time came that the annual three per cent charge equaled the total power investment the investment would be considered paid. The interest, that is, would be considered as having paid off the prin-

To overcome the solicitor's opinion and restore the law to the original intent of its author's a bill was introduced at the last session of congress to require amortization plus interest. pert standing, who I must con- should govern the consolidated nations for the positions of coun-The bell did not pass but undoubtedly will be reintroduced this

are aware of this controversy between sponsors of reclamation and the department of the interior. It may be that our D. Raver would like to see the Harper opinion stand. The fact Orient. But nickel is being fur- the suspension of local schools, offices of the state public wel- education, was elected president remains, however, that he is not taking advantage of that in nished in desired quantities by however. Probably in every case, fare commission throughout the of the Marion county service the accounting for Grand Coulee project which alone under on which we could rely in time schoolhouses would be used for his administration is affected by that opinion.

The Bonneville report dated Feb. 1, 1946 states in its introduction and summary, p. 1.

The construction costs of the Bonneville-Grand Coulee and of the Benneville dam project (allocated to power) are returned villion 50 years with interest at 25 per cent, the approximate a rrage cost of money on long-term United States treasury bonds during the eleven years ended June 30, 1943. This is in a cord with the findings and order of the federal power com-

In asignton to repaying the construction costs of the Columbia basin project allocated to power within 50 years, provision for made for three per cent interest annually on the unamortized balance of such costs and for repayment of that portion of the motivation rosts of the irrigation works which exceeds the repayment ability of the landowners.

In no case are the construction costs not repaid; and in e ery case provision is made for interest annually on balances

With specific reference to Grand Coulee, the report accepts ministration will get a big argu- in savin the Harper epinion as valid as Bonneville administration as a shortage of this primarily necesd vision of the department of the interior, should, but states sary natural resource. that its accounting goes beyond the requirements under that Likened to Tungsten

The recumation project act of 1939 does not require that the power revenues cover interest on the power investment over and we full repayment. The act does require that power revenues ternes the construction costs allocated to power, and in addition, as h portions of the construction costs allocated to other reimhirsable purposes as exceeds the ability of the water users to report in the present instance, the amounts paid from power 12 cours for return of construction costs allocated to purposes other than power is far more more than the amount that would he required to repay any reasonable rate of interest from year to year on the unamortized power investment. Nevertheless, in addition to making payments as required by law, additional revenues are being set aside equivalent to three per cent annually on the unamortized power construction costs. (Heavy type ours

Paul Mallon's BEHIND THE NEWS

(Distribution by Kings Features Syn-ficate, inc. Reproduction in whole or in part strictly prohibited).

WASHINGTON, Jan. 19-The most startling advice which Mr. Truman gave congress in his annual message was that "we are rapidly becoming a 'have not' nation as to

generalities, rather dismal

nonobjectivist picture that we are losing our world superiority for any coming international trade conquests, and we had better darnedsight get busy also for national defense.

What this picture will turn out to be when the president finishes it is a detailed recommendation for buying foreign minerals, and lowering or abolishing the tariffs on them to import them in greater quantities, thus to save ourselves from mineral poverty. Indeed the state department is known already to have a list of no less than 1300 products upon which it proposes to hold hearings shortly to see if it cannot do exactly that—cut the tariff and encourage buying.

The new Republican senators are squirming in chairs not yet warm, and some of them privately are already murmuring the administration is working up a hidden ball trick on them.

Short of Minerals Actually this nation is short in portant minerals, according to a ing up the local district organimining engineer of long and ex- zation.
