Best answer when the open road calls...

The oil that stops 80% of engine wear

Summer vacations are tough on motors. There's the harmful grindstone effect of road dirt. And there's the threat of internal rust, (cause of 80% of engine wear), when your car stands idle. RPM Motor Oil is especially compounded to keep dirt dispersed between oil drains—and to prevent harmful internal rust. When the open road calls, go with "RPM"—it's first choice in the West.

We take better care of your car
