### Gardeners Warned Again About DDT

While DDT residues are not as acutely poisonous to humans as many other common spray materials, care is necessary with vegetables to see that residues left are kept low to avoid any danger from daily consumption, reports Dr. R. H. Robinson, chemist, and Leon Terriere, research assistant, Oregon State college experiment station.

DDT at proper concentrations and under approved methods may be used safely on practically all garden crops except spinach, lettuce and similar leafy vegetables. With broccoli and tomatoes no late applications are recommended. With beans no applications after pods are three inches long are recommended except where processing will remove residues.
