Justice-At Least-for Indians

The United States' early dealings with the original owners of this country, the Indians, is one part of our history of which no American can be too proud. Oregon shares in this blot on our national record but now it seems that justice, of a sort, will triumph-albeit belatedly.

The U.S. court of claims has ruled that the government must pay for the land taken from the Indians by the pioneers. If congress appropriates the more than \$16,500,000 the Indians claim, the Great White Father will finally be able to discharge a 100-year-old debt.

It was a century ago that Governor Joseph Lane was welcomed to Oregon by the chiefs of many-tribes, who came to him willing to sell their-possessory rights to the land. At that time the government could have obtained title peace-ably before the immigration trains started rolling in. But Lane had no authority and no funds. So he wrote Washington that "extinguishment of their title by purchase, and locating them (the Indians) in a district removed from settlement is a measure of most vital importance to them."

In 1850 congress authorized commissioners to deal with the Indians. Their task was to secure from the natives their title to all the land west of the Cascades and, if possible, move all the Indians into eastern Oregon. The trouble was that pioneers were staking out claims on Indian land long before any treaties were made. The donation land law granted specified acreages to settlers who established residence in the territory before December 1, 1851, without a byyour-leave from the Indians.

As Indian Superintendent Joel Palmer ex-

"Settlers have taken and now occupy within their reserve all the lands susceptible of cultivation, without regard to the occupancy of the Indians, who in several instances have been driven from their huts, their fences thrown down and property destroyed . . . (The Indians') very weakness and ignorance is one of the reasons why we should liberally provide for them. No one will for a moment pretend that the amount proposed to be paid them is any consideration, comparatively speaking, for their mountry.

The Indians realized this, too. Said Peu-peumox-mox:

Suppose you show me goods; shall I run up and take them? Goods and the earth are not equal. Goods are for using on the earth. I do not know where they have given lands for goods . . . Show me charity. I should be very much ashamed if the Americans did anything

The chief had reason to be ashamed for the Americans, for they showed him no charity. Instead, congress neglected even to ratify the treaties the Indians had made in good faith. In return for their freedom and their lands, the Indians got nothing. They were killed off to quiet title to their lands and those who lived were locked up in concentration camps called

Some protested, as did Chief John:

"This is my country. I was in it when these large trees were small, not higher than my head. My heart is sick with fighting but I want to live in my own country . . . I will not lay down my arms and go with you on the reserve. I will

And they did. There were many skirmishes, many wars. Historian Charles Carey said "it came to be the practice to shoot an . . . Indian on sight." And later Joseph Lane wrote to The Statesman:

"The Indians have been completely whipped in every fight . . . Never has an Indian country been invaded with better success or at better times . . . I had a conversation with a considerable number of Indians, who gave me a terrible account of the invasion of their country by our people,-that they were now afraid to lay down

By Joseph and Stewart Alsop WASHINGTON, Jan. 4 — The

case for launching another Man-

hattan District Project, in order

to sleep, for fear the white people would be upon them before they could awake that they were tired of war and wanted peace."

When the Indians were too few, too sick, too undernourished, and hounded from place to place, they got peace-in the reservations. By 1857 the population of the Siletz reservation on the coast numbered in the thousands and included the (Chec-coos) Chetcos, Coos, Too-toota-tays, Coquilles, Tillamooks and certain Willamette valley tribes. Their unhappy lot-rotten food, inefficient administration - improved over the years and today their descendants are not badly off. It probably won't be long before the Indians are assimilated into the rest of the population. The payment of that 16 million dollars will hasten the day.

Vandenberg Losing His Grip?

Senator Vandenberg's support, according to a press association story from Washington yesterday, of the Taft-Hoover stand on China and Formosa comes as a surprise to many observers. A deep rift over foreign policy between Taft and Vandenberg had been foreseen. Does this latest development mean that Vandenberg is conceding party leadership to Taft in international policy as well as domestic?

Taft, up for re-election this November, has gained stature as a result of his seemingly successful stumping tour of Ohio last fall. Labor is opposed to him but republicans have been looking to him for party leadership on internal issues. Taft is chairman of the GOP policy committee and whatever he says is pretty influential on the old GOP hands. Lately, Taft has more and more spoken out on foreign affairs as well as on such matters as housing, health and education. His outlook on U. S. participation in world events is conservative and in this he has been joined by the even more conservative Senator Wherry from Nebraska. Wherry, republican floor leader, is down on the administration's so-called bipartisan foreign policy. Sen. Arthur Vandenberg, of course, is partly

responsible for that bi- or nonpartisan foreign policy. His approach to international problems has been enlightened and sensible in most instances. His attempts to get republicans to accept the administration's word on foreign affairs have received the support of such GOPers as Senator Lodge from Massachusetts and Senator Morse from Oregon. But Taft has always been the reluctant elephant.

In as recent and respected a publication as the January 6 U.S. News and World Report an open break between Taft and Vandenberg is predicted. The China-Formosa issue provided the opportunity for both sides to make their case—the Taft faction to oppose Truman and demand U.S. aid to Chiang and Formosa, the Vandenberg faction to point out the pointlessness of aiding a lost cause.

Now Vandenberg has come out against the administration plan to write off China and Formosa as losses. Sick, aging, in pain after a recent lung operation, evidently Vandenberg is giving up the fight. If so, the republican party and the nation are losing an important voice in the higher councils.

The skipper of the U.S. freighter Flying Arrow sounds like a character out of a salty old adventure tale. Sail on, says he; full speed ahead and never mind the mines in the port of Shanghai. His crew is not so eager to get their heads blown off and the state department has taken an interest in their plight. But in the hard tradition of the sea, the captain's word is lawand if it's mutiny, ye're wantin' I'll hang ye from the highest yardarm, Mister Christian!

fort, on the other hand, are sharply critical of these lurid visions of the future. They do not attack the underlying theory, although they note in passing that our present, chaotic research and development program is unlikely to achieve the sort of result outlined above. Their criticism rests, rather, on their belief that GRIN AND BEAR IT in air warfare, the defense is now being developed even more rapidly than the offense.

fense, even a stockpile of hydrogen bombs will be largely a

A committee of the government's highest scientific advisors has therefore been wisely chosen, to study the current desirability of a great hydrogen project, just as President Conant and Dr. Vannevar Bush studied this question immediately after the war. On what falls within their province, the findings of the scient-ists should be final. Unfortunately, however, not even the greatest scientists can resolve the other, far deeper and graver is-sues involved in this secret debate within the government. And these also must be examined, in a subsequent report.

1950 GAME SHORTAGE

Hank Applies For Embassy **Post in China**

By Henry McLemore DAYTONA BEACH, Fla., Jan. - Whether or not the United States should recognize the Chinese Commun-

ist regime of Mao Tse - tung (who sounds a barefooted kicking University of Hawaii halfis something for congress to But if con-

gress does elect to look at China through red-colored glasses, I would like to apply, here and now, for the job of Ambassador

to Peiping. My qualifications are scant. I am the first one to admit that. Ambassadors usually are rich. Very few of them repair their own flats on the road, buy refrigerators on the installment plan, or suffer because they are not able to buy their wives fur

I am not rich. My wife is lucky to get a cloth coat with collar made of dubious fur. I always do my own vulcanizing, even when it's raining, and if it were not for the installment plan we'd still be living almost the same way that cavemen and cavewomen did.

Ambassadors usually have a habit of kicking in \$25,000 or so to the war chest of the party whose head names them as ambassadors. I have never given BUSY GUY so much as a penny to either the Democratic or Republican war chests - indeed, if I had \$25,000 I wouldn't care who was required of Col. Robert H. Nanz, president. I'd be living in style 63, vice president of Schenley Inon some little island, which dustries, Inc., who, in addition to politics reached only by occa- running distilling plants employ-

you want help with your tax return, you'll have to stop insisting that you gotta live . . .

(Continued from page 1.)

In fact administration friends have been conceding that the Taft-Hartley repeal will not be accomplished at this session, that the national health insurance program (socialized medicine) will not be adopted, nor the Brannan plan for agriculture. The November elections will be in a measure a referendum on these bills and on the Truman

What this congress must face up to are the hard facts of finance. Pressures for reduction in excise taxes are strong, as the president himself recognizes. But revenues must be maintained in large volume for at best spending will be on a big scale. Returning senators and congressmen will bring back the definite impression that the people are concerned over continuing deficits in peacetime. They must do their best to cut down that deficit for the next fiscal year, by reducing expenditures and by avoiding tax cuts that would reduce treasury income, though it certainly is time the heavy war-

time excise taxes are lightened. Initially the senate is due to take up repeal of the oleo tax and civil rights bills. These may tie up that body for a considerable period of time. Dairy interests maintain strong lobbies and will insist on preserving yellow as the butter color if the oleo tax is to come off. And southern senators will filibuster

In effect congress takes up just where it left off when it adjourn- Cars Noted In effect congress takes up just ed in the fall: the same bills before it, the same lineup of fair dealers and opposing republicans and southern democrats, and about the same attitude on the part of the public.

One thing is evident, that legislation can be considered in less of an atmosphere of crisis than for a decade. Foreign affairs are less angry and will be less absorbing of the attention of congress. The China situation will occasion much debate, but probably little action. should have time and take time for serious consideration of our domestic problems of which public finance is most important.

Esappointments, some such de-

highest governmental level. The worst nightmares have a way of coming true, nowadays. The essential arguments must therefore be set down. In brief, it is theoretically feas-Tole to build a hydrogen bomb with something like 1,000 times the force of the uranium - plu-tonium bomb that fell on Hiroshima. It may

cost anywhere from \$2 to \$4 billions, to build such a bomb in the shortest possible space Stewart Alsop of time. The real issue in debate -a bitter commentary on the state of the world - is whether

such bombs can be surely delivered to their proper targets.

To be blunt about it, the vital centers of the Soviet Union are the obvious potential targets, whether for the hydrogen bomb of the future, or for our existing stockpile of uranium-plutonium bombs. Great distances, uncertain topography and other factors will always make it extremely difficult to hit targets in Russia with reasonable accuracy. And the chief attraction of the hydrogen bomb is that it will reduce

bombing attack. This is simply because such a

nium on accuracy in any

tate an area of from sixty to 100 square miles, in one ghastly detonation. Hence it should transform what would be a wide miss, even with a uranium-plutonium bomb, into a direct hit consuming a whole city. Even for convent-ional bombing, this is crucially

important. Furthermore, its importance may later be increased very greatly, by the development of long-range guided missiles. Provided a pilotless aircraft is the type selected, it has been possible to build the airframe of a long-range missile at any time since the war. The most talkedabout design is a stripped-down, pilotless jet bomber capable of several thousand miles of flight, at just sub-sonic speeds and at very high altitudes. How to guide

such a missile has always been In the last year, however, the basic obstacle to long range missile guidance has been successfully surmounted. As was reported in this space a "non-precessable" gyroscope has been designed at M.I.T. This almost miraculous instrument is simply a gyroscope whose accuracy is not disturbed by friction. Because it is dependably stable, it provides the long-sought "brain" for missile guidance systems.

The new gyroscope can, for example, form the basis of a mechanism that will control a missile during thousands of miles of flight by automatic celestial navigation. Equally, it can be married to the radar target locater that will send the missile home in the last stage of its long course. And while these, or other, guidance methods can hardly achieve pinpoint hits, they should bring the missiles quite near enough to their targets, if the war heads are hydrogen bombs.

Already, therefore, fleets of inter-continental guided mis-

siles, carrying hydrogen bombs, are expected in certain authoritative quarters to be the strategic attack force of the future. With all due allowance for inevitable

Super-Bomb Project Being Studied theory. Those who expect theory to be translated into practice are the advocates of an immediate special effort to build a hydrogen

The opponents of such an ef-

Within the past fourteen months, American strategic air capabilities have already been materially reduced, by the appearance of an excellent Soviet jet fighter and the beginning of a Soviet air warning net. Piloted and pilotless aircraft alike are already threatened by the prototype of an effective anti-aircraft guided missile. The whole present theory of bombing could be upset by already discussed devices to jam radar target locaters. If progress with these defensive weapons really out-distances progress with the weapons of of-
