Vitamin Key To Hardening Of Arteries

By Alton L. Blakeslee
Associated Press Science Reporter
CHICAGO, Sept. 4 (AP)—A sweet-tasting vitamin may be a key to preventing hardening of the arteries, one of man's greatest killer diseases, a young woman biochemist said today . . .

And if so, she added, it might prove to be a youth pill in cases where "a man is as old as his arteries." This chemical is inositol, which is a vitamin or else a substance much like a vitamin. It is a white powder, made from corn products. It is found in plant and animal tissue, and has been called muscle "sugar" because of its sweet taste . . .

New experiments with it were reported to the American Chemical society by Miss Stephanie J. Belka of St. Luke's hospital, New York City . . .

Inositol effectively cut down the amount of cholesterol in the blood of rabbits, she said. Cholesterol is a fatty material blamed as a main cause of hardening of the arteries . . .

ROADBLOCKS FORM
In this disease, fatty deposits form roadblocks on the inner walls of arteries, narrowing them. The heart has to work harder to pump blood through, the heart failure or strokes often result . . .
