### Icing Blamed For Crashes Of Eight Jets

WASHINGTON, June 12-(P)Icing, not sabotage, caused eight
F84 Thunderjets to crash in Indiana last Friday, the air force
announced today.

It reported that a preliminary

Investigation showed that engine inlet screens ice up and became blocked when the aircraft entered "a peculiar set of localized atmospheric conditions" just after "taking off from Wright-Patterson Field, Dayton, Ohio, where they had been refueled.

Three pilots died in the crashes. It was the largest mass jet disaster in aviation history.

Inquiries by the air force, the FBI and aircraft manufacturers uncovered "no indications of sabotage," the air force said.

The eight planes were in a flight of 34 Thunderjets proceeding from Austin, Texas, to Self-ridge Field, Mich. Just before the accident, a thunderstorm had struck the area around Richmond,

All 71 planes taking part in the training exercise are being in-spected to determine whether they suffered any ill effects from flying through the storm area. Fourteen planes checked so far have disclosed "no signs of visible damage and are ready for flight," the air force said. The investigation is continuing in an effort "to determine necessary action to prevent similar accidents."

The Atomic Energy Commission was ordered to start production of the H-Bomb on January 31, 1950.

ing made for the meeting. The auxiliary is already outlining its program for the fall meeting. The convention will be held at the Multnomah hotel.
