They Don't Use Ladders

If you have ever wondered how the light globes in street lights are serviced, the answer is above. The hydraulic lift mounted on the Portland General Electric Co. truck can be raised, lowered, tilted and swung about to reach street lights, power lines or tree branches interferring with power lines. Inset shows Eldon E. Hepburn, PGE employe, in the crow's nest. (Statesman photo.)

12 Men Granted

Artillery Group

Battery D. Salem's artillery unit of the national guard, has promoted 12 men to private first

class and has reported the enliste-

When the annual Older Boys cers. Commanding officer is Capt.

Conference meets Saturday at Advanced were Dale Ackerman Salem YMCA, its special guests Conrad Booze, John Burcham, will include men from throughout Rolland Cocking, George Collins, the Willamette valley who as boys Edward Ginther, Don Lindberg, participated in the conference at some time during its 30-year his- Vergets.

The YMCA is extending invitation for all former "Older Boys" and Nathan Penrose. to join with the YM boys for a dinner meeting at 6:30 p. m. Saturday in the YMCA.

Dr. U. G. Dubach, Lewis and Clark college professor and former Oregon State college dean, Miller, battaloon executive officer will speak, as he has at a majority of the conferences of past years. Gregory Parr, battalion adjutant. Sharing the speaking honors at the dinner will be another Lewis and Clark faculty man, Prof. A. A. Salem Girl Wins future of atomic power.

Legation Center Of Kidnap Ring; Refugees Seized

VIENNA, Dec. 5-(INS)-A high official said today that the Hungarian legation in Vienna is the center of a large-scale kidnap ring engaged in forcible repatriation of Hungarian refugees who escaped

State Secretary for Internal Security, Ferdinand Graf, said Hungarian Communist agents are smuggled into Austria to capture refugees who are talking too much about the true situation in Communist Hungary.

Graf said that the agents made the Hungarian legation their headquarters and operate partly under protection of diplomatic immunity. The state secretary said that during last summer the Hungarians built special interrogation cells in the basement of the legation similar to the notorious Soviet NKVD torture chambers.

a BILLION kilowatt-hours of urgently needed electricity every year

PGE has applications pending for two big projects on the Deschutes river, which together can add a BILLION kilowatt-hours a year to the Pacific Northwest's power supply. That's a lot of electric energy—enough to meet the industrial and residential needs of a city of 300,000. Oregon and the Northwest must have more power in order to continue to grow, to encourage new industries to settle here, to make jobs! PGE's proposed developments will be a fast step forward in meeting the region's ever-growing power needs.

Facilities for fish protection a major part of the projects

PGE is doing everything possible to see that Oregon has both power and fish. Reservoirs behind the dams will provide more trout for sportsmen and easy access to what are now steep and inaccessible canyon areas. A \$3,430,000 re-regulating dam will preserve the river's natural levels downstream.

The Deschutes presently is not an important salmon stream. The small existing salmon runs can be maintained and augmented by the new egg-taking and expanded hatchery facilities which PGE has offered to pay for and help maintain.

New power means new jobs

Translated into industrial terms, the energy from Pelton and Round Butte dams would be enough to supply 35,000 foundry jobs, or 100,000 jobs in the lumber industry, or 200,000 jobs in the textile industry. That means payrolls, prosperity, progress!
