### WILLAMETTE VALLEY FARMER + News and Views of Farm and Garden -By LILLE L. MADSEN

# **Farmers** Cautioned to Buy, Sell Carefully to Avoid Squeeze in '53

#### By LILLIE L. MADSEN Farm Editor, The Statesman

If the farmer can avoid being caught between the shaky prices for his produce, and the rising costs for his purchases, 1953 should be a good year, farm economists were predicting as the curtain was rolling down oh 1952 ...

All indications are that business enters the New Year and the new administration with increased confidence. If the farmer will watch

his selling carefully and do his buying with even more care, he will come out okay, these econo-mists say, as they warn that there car. be no philandering this new year in either the going or the coming markets. Buyers have not gone on a strike. Customers are still in a buying mood, but they are asking a bit more for their money. Like the farmer should do, the booking over To Flowering the buying public is looking over the situation before forking out the price.

The buying caution which has The buying caution which has to production, scientists at the been thrown to the wind in post- University of California are anwar days, had better be blowing back again if the farmer is not going to find himself, along with other businesses, out on a limb from which neither the Republic-ans nor the Democrats can rescue related to the level of auxin (the County Berry him, these same economists indicate.

## **Valley Farm**

### **Income Down** During 1952

dime or nickel, he chooses the Reports from various counties indicate that in the Willamette

Valley the gross farm income dropped during 1952. In Marion County the gross in-come dropped nearly 5 per cent

in 1952 from the previous year. The widely diversified agriculture returned \$32,800,000 to land own-ers as compared with \$34,350,000 in 1951.

Cost of operations were up sharply that net return for the farmer fell far short of the past several seasons.

Potatoes and truck crops, including onions, green beans and sweet corn, accounted for \$4,750,-000. Tree fruits and nuts brought farmers \$2,000,000 and small fruits returned \$3,000,000.

High on the farm crop list was \$3,500,000 worth of grain, and \$2,250,000 in grass seed crops. Peppermint accounts for \$1,666,000, poultry and eggs, \$3,800,000 while turkeys returned \$2,500,000 and beef sheep and hogs about \$1,500,-

Marion County rated 75th among counties in the United states for gross income in 1951 and first in Oregon, but it was expected that Marion fell below this position in 1952.

The Clackamas County report shows a drop of approximately 4 per cent in gross farm income

under the previous year. From an all-time high in 1951 of \$25,687,000 Brother to the income of Clackamas farms

53.1 per cent was derived from farm crops. This difference has been brought about by lower been brought about by lower prices for meat animal products,

pretty much on an even keel with the year previous. Most of the milk from this area is now consumed in the bottle trade as fluid milk. The smaller dairy herdsthe ones which formerly produced butterfat for creameries and condensaries have largely disappeared. On these farms are now

Livestock dropped to \$2,842,-750 from \$4,045,000 during the year. Decline in meat prices and in wool is responsible for this decrease. However, reports show

### Rat Draws Money From Bank, **Runs to Store to Buy Cheese**

The rat does this in the labra-tory of Dr. Loh Seng Tsai, pro-fessor of psychology at Tulane University.

The test shows that rats have a sense of value, Dr. Tsai told the American Association for the Advancement of Science. The rate also learn to use tools as well as coins, all indicating a high rate

of intelligence. It's the first time, he says, that rats have been shown to be able to use tools and tokens. It's been done with apes and chimpanzees and other psychologists have trained chimps to use slot machines.

Now rats, which are cheaper and can be bred to be all alike, can be used for studies of mental processes and behavior in animals, which in turn can help toward a better understanding of the whys and wherefores of the human mind.

The smart-money rat works it this way: The rat pulls a chain, to spill coins from a can hanging overhead. The rat picks up coin in his mouth, runs over te put it on a saucer in exchange for cheese.

One rat learned the value of the coins, from getting the bigger re-ward by choosing the more valuable coin.

Other rats have learned to move miniature car to reach food, use a flying trapeze, or pull a chain to raise a ladder to climb to a high shelf.

Earlier, Dr. Tsai showed that cats and rats can be trained te

cats and rats can be trained to cooperate and live in peace. Tuesday he reported that a con-firmed rat-killing cat had learned to live peacably and cooperate with a rat. If you plan to seed spring wheat, buy your seed now is the warning. The general wheat out- Farm look not only in the Pacific Northwest, but in the entire wheat producing country is bad. Dry weather prevented seeding of much wheat and killed that which was planted in much of the country. Estimates of planted acreage run from 50 per cent down of normal growing wheat fields for this time of year.

The year just closing has been one of mixed blessings for Oregon farmers. One of the heaviest crops on record, sharply declining livestock prices, record high farm income, and almost record high farm costs, make the final outcome rather hazy.

Prices received for most crops so far this season have been lower than last year. But the tonnage

was greater, so that the value of the 1952 crop production reached the record high level of \$284,508,-000 in Oregon. This estimate by Niels I. Nielsen, in charge of the Oregon crop reporting service for the USDA, is 9 per cent above last year and more than four times the pre-war average.

Oregon's fields, gardens and orchards produced 4,627,700 tons of food, feed and seed. Oregon's gross income reached a record high of \$459,000,000, about \$29,000,000 more than last year. Crop receipts were up \$37,000,000, while livestock receipts were down \$8,000. Cattle and lamb prices dropped

from 25 to 35 per cent during the year. Hog prices, which took their big slide in 1951, showed a further Oregon's Brand decline of around 10 per cent in Law for Livestock 1952. Farm economists are predicting a further cattle price de-cline of 20 per cent over the next Discussion Topic several years, while the upswing in cattle population is expected to continue. But, say the cattlemen of longtime standing, even with these drops, you can make a good living with cattle if you are efficient.

tle for the first 11 months of 1952, as given by the crop reporting service was \$23 compared with \$27.50 for all of 1951. Hogs averaged \$20.20 during the year just closed, while \$22.50 was the average for 1951, and lambs \$23.45 against \$29.60 the year previous.

Production of principal seed crops topped the relatively small 1951 output by 53 per cent. Prices were sharply lower, making the value of the 1952 crop slightly less than last year. Tonnage in the Oregon berryfields was second largest on record, and up 45 percent from 1951. However, lower prices brought the value of the year's production up only 30 per cent.

While production of tree fruits FAIR BOARD TO MEET and nuts reached 304,100 tons, The Linn County fair be and nuts reached 304,100 tons, The Linn County fair board will larger than the year previous, it hold its annual meeting in the Al-
