New Church Pondered by Presbyterians

Members of the First Presbyterian Church at the annual congregational meeting Wednesday night named a committee to study the possibility of establishing a branch church in Salem.

With present membership over the 1,700 mark, church officials feel there is a need for an additional congregation. If a decision is reached to authorize the new congregation, it will be sponsored by the First Presbyterian Church until it is able to support itself financially, according to Harold Phillippe, clerk of the session.

Wednesday night's session also authorized the appointment of a committee to investigate the purchase of additional property on which to build the First Presbyterian Church now located on property which eventually will become part of the Capitol Mall. A possible site for the new structure is the block bounded by Court, Winter, Chemeketa and Cottage streets, where the congregation already owns considerable property, Phillippe said.

Puzzled about the best nitrogen fertilizer for your pastures?

Let the Lewis County Grassland tests provide the answer. These widely-hailed tests, conducted in 1953, show beyond question the advantage of using Viking Ship Calcium Nitrate.

In every test conducted, Calcium Nitrate appreciably increased pasture yields. And, in general, Calcium Nitrate gave larger crop returns than other fertilizers tested; gave the best average dollar returns!

Pasture fertilization is more effective with Calcium Nitrate because each ton of Calcium Nitrate gives you:

- immediately available and efficient nitrate nitrogen that works in any weather—it doesn't have to be converted.
- 400 lbs. of water-soluble calcium to help combat acid soil, supply much needed calcium.

And Calcium Nitrate leaves no harmful residue in the soil. Calcium Nitrate is pelleted, readily soluble in water, and easy to apply through your sprinkler system or by broadcasting over the soil.
