

**Keep Leaves Pliable by This Method**

By **ERMINA FISHER**  
County Extension Agent

Perhaps you'd like to know how to make the beautiful fall leaves pliable and soft. Everyone has seen them in the florists shops.

Mrs. Ann Weigant, recreation specialist from Oregon State College tells how to do it.

It's autumn again and every hillside is beginning to burst into flame. If you long to gather armloads of color and carry it home, do so, but proceed with caution. Be sure you know what you're picking. Poison oak, notorious for its harmful effects, is apt to be so, but proceed with caution. Be sure you know what you're picking. Poison oak, notorious for its harmful effects, is apt to be so, but proceed with caution.

**Use Wood**

The leaves, singly or preferably on branches, one to three feet long, are placed in a large wooden or cement vat containing Javelle water. Javelle water is made by putting four pounds of sal soda, (also called sodium carbonate and washing soda), into an enameled vessel with one gallon of water and boiling 10 minutes; then add one pound of bleaching powder, also called chloride of lime free from lumps. When cold strain into a jug or large bottle and keep tightly corked. Metal receptacles will be destroyed by it if allowed to stand. For large quantities use the same proportions, strain into a wooden or cement vat and use at once.

Full strength will destroy leaves in a short time. Oak leaves, on account of a large amount of tannin, require the solution to be diluted one-fourth, while all other leaves tried require solution to be diluted one-half. Time for bleaching varies from 12 to 36 hours, depending upon the leaf used.

**Wash Thoroughly**

When thoroughly bleached, leaves should be removed to another vat and thoroughly washed in running water for several hours; or after several thorough rinsings they may be immersed for 10 to 15 minutes in a 1/4 of 1% solution of acetic or hydrochloric acid, which will aid materially in setting some of the colors. Leaves should then be placed in another vat containing a basic dye (suitable for dyeing cotton goods) of the desired color.

If you want the spotty coloring so beautiful in fall leaves, mix your rich orange, red, brown, and varying green dyes and spray the coloring on, bit and mix with a throat atomizer. You can rival Nature herself with your artistry here.

After leaves are dyed, they should be thoroughly washed and placed for a few hours in a vat containing a 5% solution of glycerine. Then remove and place in racks to dry. They will remain pliable indefinitely.

**Horner Muffins Reveal Secrets**

The youngsters will be delighted with Jack Horner Muffins, with a nice fat prune in the middle of a peanut butter-flavored bread. You'll have no trouble getting the children to eat a good breakfast before school when these homemade muffins are on the menu.

**Jack Horner Muffins**

3 tablespoons butter or margarine  
3 tablespoons peanut butter  
2 tablespoons sugar  
1 egg  
1/4 teaspoon soda  
1 cup buttermilk  
2 cups sifted all-purpose flour  
1 teaspoon baking powder  
1/2 teaspoon salt  
12 cooked prunes

Cream together butter, peanut butter and sugar. Stir in beaten egg. Dissolve soda in buttermilk and add to creamed mixture. Sift flour, with baking powder and salt, and add to first mixture. Fill greased muffin pans two-thirds full. Press a pitted prune into center of each. Bake in very hot oven (450 degrees) 15 to 18 minutes.

Makes 12 medium-sized muffins.

**INSIDE STUFF**

Onion strips, cooked in butter until they are pale golden, and coarsely grated cheddar cheese make a wonderful filling for turnovers. Use a richly flaky dough for the pastry.

**RIGHT SIZE**

When buying sheets, remember that the lengths shown on labels describe the sheets before they were hemmed; subtract about five inches from label figures to allow for the hem.

**WUG-WAY**

Shortly before broiled chops are ready, put some thick slices of orange (membrane-free) under the broiler. Sprinkle the oranges with a little sugar and apples.
