Semi-Tropical Fruit Welcomed for Everyday Use, Especially in Winter

Salem grocers have been suggesting that women purchase their avocados in larger quantities at one time and buy them good and green. Ripening at home, they suggest, is better because handling in the stores is bound to produce bruises.

One grocer hinted that he can afford to sell a little cheaper if very green fruit is taken—and in larger quantities at one time. He would have less storage to take care of and less loss.

I've always been an enthusiastic user of avocados, and our's is a family where one can't keep his avocado to himself—we all like them. If I can convert a reader to the use of this delicious fruit, I count the day a success.

The avocado is a semi-tropical fruit, practically always eaten fresh. While 99 varieties of avocado are grown in California, only 14 are considered good enough to be stamped with the trade name "Calavo," coined from the words California and avocado. It is owned by the California avocado growers organization.

The fruit is picked while very green and allowed to ripen under controlled conditions. The outward appearance of the fruit means little, because hard-shelled varieties never get soft on

Or you can mash the pulp, add a hard cooked egg, season with salt, garlic salt, lemon juice and a little tabasco and spread on bread or crackers.

Avocados combine with either fruit or vegetables. They make good flavor in the fruit mixture, and look and taste just right with tomatoes. Fill a half avocado with a fruity mixture and top with a dab of sherbet, or mix with chunks of tomato and lettuce.

It's good just on the half shell, seasoned with lemon or salt and served for breakfast.
