RIVERSIDE TIRES are

RIVERSIDE TIRES have LATEX WELDED CORDS (100% PURE LIQUID RUBBER)

which prevent Cord Separation . . the cause of blowouts

Cord Separation

This shows how cords inside tires other than Riversides are separated by heat. Cord separation causes internal blisters, weakens the tire. A blowout is the result! Riversides are Blowout Proof because of Latex dipping!

Do you know this? An average size tire goes round 395 times every minute at only 35 miles an hour! Think what happens when you drive at this speed—or faster! Friction develops scorching heat inside your tires! In many tires other than Riversides this heat separates cords and forms internal blisters! When you hit a rock or a bump . . . BANG! A Blowout! Riversides' Selected Cords—the heart of the tire—are made from extra strong, long staple, premium cotton. Every cord in every ply is dipped in LATEX—100% pure, liquid, virgin rubber. This welds the cords into a super strong unit! It gives Riversides the strongest tire carcass made!

Latex Dipping

By an extra process, every cord in every ply in all Riversides tires is dipped in Latex. This welds the cords into a super strong unit that defies cord separation and blowouts!

Why We Save You Money

Of course Riversides are made in one of America's largest and best tire factories. BUT—they come direct to us—minus the manufacturer's selling and general overhead expense. That's a saving. The second saving comes from Wards low cost method of distribution. These two reasons explain why we sell high quality tires for less—why Riversides are better in quality, mileage, and safety than any other tire at the same price.

Wards Unlimited Guarantee

For your protection every single Riverside tire is guaranteed by Wards to give service that is satisfactory to you. No time limit! No mileage limit! A tire has to be extra good—has to be extra safe to be backed by the strongest tire guarantee ever written!

RIVERSIDE TIRES

will not blow out under normal road conditions during the life of the tread if they are kept properly inflated in accordance with the specified air pressures.
