Hints For Home Owners

Chimney Efficiency A large part of the efficiency of a chimney is due to its height...

Handy Waste Basket The home owner setting out to modernize his kitchen can accomplish much in one stroke by installing a sink which comes complete with a waste unit that replaces the messy garbage pail.

BACK IN Europe after a visit to the United States, Countess Court Haugwitz-Reventlow, the former Barbara Hutton, is shown in Paris as she sets out from the Hotel Ritz for an early morning tennis game. Her companion is not identified.

to a clean, flowing liquid, and washes it down the drain, thus banishing the unsightly and odorous garbage pail.

provides domestic hot water, this load must be added to the calculated heat loss of the dwelling before the safety factor is added.

WELL BUILT STAIRS Firm railings and stair treads, plus well-placed lights and switches, may prevent many painful and expensive accidents in the home.

Heating Plant Should Allow Safety Factor In selecting a heating plant for a dwelling, it is suggested that a safety factor of at least 20 per cent over the estimated actual heating load be allowed.

Recipes of The Week Contest

By MARIAN LOWRY

ATE summer and early fall find many homemakers busy with the pear, plum, and prune crops, serving them fresh in many ways for the daily menus, or canning and preserving for the coming winter.

Keeping up with seasons, the recipes of the week contest this week has for its topic: "Recipes Using Fresh Pears, Plums, and Prunes." It will be

- Peach Grape Gelatin, see page 6. Peach Puddin's, see page 4. Fresh Peach Chiffon Pie, see page 9. Apricot Jam, see page 14. Apricot Frozen Dessert, see page 8.

some time before these crops are on in full swing, but the department wishes to have a good collection of ideas to pass on in time to be of service.

Desserts, preserves and butters, as well as all ideas on using these fruits uncooked are eligible for the recipe event.

It is a topic that should create considerable interest and bring in scores of ideas.

Wednesday evening is the deadline on the contest, all entries to be in at the Register-Guard office by 6 o'clock. As usual, there will be five one-dollar certificates offered as prizes, each certificate being good in trade at any of the grocery stores advertising in the Register-Guard.

Past Week's Winners In today's column are listed the winners of the past week's contest on peach and apricot recipes as follows:

- Mrs. Atwood Foster, 317 Washington street, Cottage Grove, "Peach Grape Gelatin." Mrs. E. F. Mack, 1308 Fourth avenue west, "Peach Puddin'." Mrs. O. U. Spies, Cottage Grove, "Fresh Peach Chiffon Pie." Mrs. M. Johnson, 591 West Broadway, "Apricot Jam." Mrs. Charles Hastings, 908 Adams street, "Apricot Frozen Dessert."

Each winner is to receive a certificate, good in trade for one dollar's worth of groceries at any store advertising in the Register-Guard. The certificates may be obtained at the Register-Guard office.

Approximately 70 per cent of all the passenger automobiles sold in the United States last year were used cars.

More than half of the pedestrians killed in traffic meet deaths between the hours of 6 p. m. and midnight.

"PARIS has nothing on me," said pretty Peggy Davis of Chicago when she read Paris had started a new fad of painting flowers on knees. Peggy displayed a picture of her "dream man" painted on her knee. Now, she says, she's taking something to stop her dreaming.

Extra Attic Windows Make Space Livable

A popular modernization project is the conversion of attic space into living quarters.

Frequently homes are designed with a view to future expansion of the quarters. In such cases the upper story is often not finished and is used for storage purposes or not used at all.

If such is the case, an architect should be employed. If the owner undertakes to place the windows and to decide the size and type he may impair the design of the dwelling.

Dormer windows, when properly adapted to the size and design of a house, are attractive additions, but if out of scale or improperly located can distort the lines of a house.

According to many automotive engineers, ordinary cork soles are the best facing for clutch friction plates which serve to prevent slippage and loss of power.

To stop a car traveling 70 miles an hour, the average set of brakes are required to convert to heat as much as 500 horsepower of work.
