STORM SASH HELPFUL
The installation of storm sash, tight enough to prevent cold air striking the inner windows, will aid in combating the formation of window frost on window panes.

Frost is formed by the conden-

sation and freezing of moisture

from the inside air upon the cold

surfaces of the window panes.

Obstruction of vision is the least

of the important trouble caused by

frost. More serious is the possible

damage by melting frost. When

frost melts, water runs down over

the woodwork and plaster, dam-

aging the finish on the woodwork

and the wall decorations.
