Light Comedy Slated At University

Believing that audiences of defense-conscious today are continually searching for more that is gay and light-hearted in their theatrical entertainment, Ottilie Turnbull Seybolt of the University of Oregon drama division has chosen Gerald Savory's wacky comedy, "George and Margaret," for the first summer production of the University Players.

Scheduled for a two-night performance, Wednesday and Thursday, July 10 and 11, "George and Margaret" has been in rehearsal for several weeks on the campus and the ticket office in Johnson hall opens Monday afternoon at 1 o'clock. In order to add new novelty to the presentation, the play will be offered in the intimate theater style, with audience seated on all four sides of the players, in the AWS room on the top floor of Gerlinger hall.

"George and Margaret" lives up to the reputation of current English humor for amiability and wit. Dedicated to the principle that everything is for the best and that times are "normal," the drama revolves around a crazy but comfortable family of five. Mother (Florence Shumaker), is a congenial fussbudget. Father Malcolm (Adrian Martin), possesses an absentmindedness which verges on the sublime.

Daughter Frankie (Trudy Harland) suffers from vestal restlessness. Brother Dudley (Jim Parsons) spouts Noel Coward and badgers stuffy Brother Claude (Marvin Krenk), who builds houses and does setting-up exercises. Clouds gather over the breakfast table when Gladys the maid (Mary Staton Krenk) is found crying near the sausages and Frankie reports she saw Claude acting suspiciously. Two acts and a fortnight later, just in time for the arrival of the much-discussed and dreaded guests ("George" and "Margaret") the domestic weather settles fair, with Beer the new maid (Clara Fitch) to assist in a rousing climax.

"George and Margaret" is under the direction of Mrs. Seybolt. The ticket office for reservations will be open from 1 to 5 o'clock each afternoon in 106 Johnson hall. The telephone is 3300, extension 217.

Plant Construction Greatly Increased By Telephone Company

N. R. Powley, president of the Pacific Telephone and Telegraph company, issued a statement today in connection with the release of the dividend checks to shareholders in which he commented on the indicated adverse effect on the company's earnings due to its huge plant construction program—in excess of 50 per cent over last year—now totaling more than \$70,000,000, heavy increased wage payments recently effective and the forthcoming substantial tax increases.

In further commenting on the statement to the shareholders, Mr. Powley stated:

"Throughout the entire Pacific coast we are making huge plant additions to meet the extraordinary service requirements involved in the defense preparedness and the accelerated tempo of business activity. Our working forces have been considerably increased in number and we now have in excess of 35,000 employees or over 5000 more than a year ago. We have the highest payroll in the history of the company.

"Prior to the first of the year we estimated that our 1941 construction program would approximate \$60,000,000 of which an aggregate of \$48,000,000 would be exclusively for new construction. We now estimate that this program, which is still in a state of flux, will be in excess of \$70,000,000 and it will undoubtedly be enlarged due to the continued unusual and unforeseen extraordinary service demands."

CANDY AND COOKIE SPECIALS FOR THE 4th

Wrapped Peppermint Kisses . . . 20c lb.
Wrapped Jelly Nougats . . . 20c lb.
Wrapped Fruit Filled Caramels . . . 20c lb.
Peanut Squares . . . 20c lb.

They squeeze Petroleum to get better orange juice

Visit an orange grove, and you're likely to see gas being "injected" from cylinders into the irrigation ditches. It's carried by the water to the roots of the trees, to make bigger, sweeter, juicier oranges.

That's the result. At the start, scientists of the "University of Petroleum" (Shell's \$3,500,000 research laboratories) found they could "crack" petroleum gas with a mighty squeeze, and get hydrogen. They combined this with nitrogen from the air and had an excellent fertilizer (Shell NH₃).

Simple? Hardly that. Nor was it simple to combine the right molecules from petroleum and make synthetic rubber, glycerine, disinfectants—or the new solutized Shell Gasoline.

Producing a constantly better motor fuel—this is always the main job of these molecule jugglers. You buy their genius at Shell pumps.

Try a tankful of research genius — NEW Solutized SHELL

Two scientific factors advance the Road Performance Rating of the new Shell Gasoline to an all-time high:

1. It is refined with the Solutizer Process (originated by Shell's research laboratories, Patent No. 2,149,379). This steps up performance by removing the "pro-knock mercaptans" which have always been a drag on gasoline performance.

2. Thermal conversion makes it extra rich in iso-compounds similar to iso-octane—first

produced commercially by Shell scientists to give America 100-octane aviation gasoline . . . fuel so powerful and efficient that it led to an increase in the speed and flying range of America's planes up to 30%!

These two factors save on the costliest driving you do—Stop-and-Go. And improved road performance means a new thrill in all your motoring! Your Shell dealer has new Solutized Shell (at regular price) and Shell Premium—try a tankful today!

TIP FOR TOURISTS
Look for the "White Cross" emblem on Shell restrooms. It means spotless toilet and washbowl facilities—clean mirrors, walls and floors—and plenty of soap and tissue towels at all times—as recommended editorially by Good Housekeeping Magazine.
