HARD OF HEARING

See the Western Electric Vacuum Tube Audiphone

NEW new electronic Audiphone is a result of the exhaustive research by Bell Telephone Laboratories which produced the Ortho-technic carbon set, leader in its field. Its high fidelity covers a broad range of tones up to a new realm of hearing enjoyment.

STABILIZED FEEDBACK... As Ortho-technic Exclusive! Stabilized Feedback, a fundamental development of Bell Telephone Laboratories, has brought new fidelity and clarity of sound to radio broadcasting and the whole art of telephony. Now Western Electric brings the advantages of this revolutionary circuit to the hard-of-hearing.

Stabilized Feedback makes possible high amplification without distortion over a broader range of tones than has heretofore been possible... and it maintains this performance throughout the useful battery life.

Tone Discrimination: Increases speech intelligibility by suppressing low-pitched background noises.
Overload Limitation: Prevents unpleasant blasts in your ears.
Smooth Regulation: Controls loudness to meet your particular needs.
