

Moll, Still Sporting Beard, Back from Australian Study

After eight months in Australia where he lived with the aborigines, Ernest G. Moll, Oregon's bearded English lit prof, is back in Eugene, a little tanner and more rugged looking than he was last summer, but with the same twinkle in his eye that inspired a generation of college students to read Shakespeare and Chaucer—and love it.

Lane Logging Cut Surveyed

(CONTINUED FROM PAGE 1)

of reports from the State Forestry Department, which were checked with state inspectors to keep tabs on slash disposal. The current rate of cut may be greater.

Trend Is Clear

The significance of the news is apparent when the volume of second growth cut in 1945 is compared with the volume of timber less than sawlog size cut in the decade 1932-41. In that period four billion board feet of such sawlogs were cut, or an average of 400 million feet a year, in the entire Douglas fir region of both Oregon and Washington.

In 1945 — in western Oregon alone—more than three times that amount of second growth was cut, or one billion, 292 million feet. In 1945 — in Lane county alone—more than half that amount of second growth was cut, or 258 million feet.

More Mills

The survey also discloses the approximate number of mills in Lane County in 1945, a figure which could only be guessed at before. Total number of Lane County operators in the survey was 319. The number of mills in Lane County in 1942 was 112. Between 1942 and 1945 there was an increase of 207 mills, and more have been added in 1946 and 1947.

Total number of operators cutting exclusively second growth timber in Lane County in 1945 was shown in the survey to be 191. Forty were cutting partly second growth and partly old growth. Eighty-eight were cutting old growth exclusively.

On the basis of a 225-day working year, the total second growth cut distributed among the 191 operators would mean an average daily cut of about 6000 feet per mill in this group. The amount of second growth cut by those who cut both types of trees was not figured in, but might either boost or decrease the average cut if computed. Some of the 191 second growth operators, of course, cut much more than 6000 feet a day, and some may have cut less.

Total volume of timber cut by old growth operators was three billion, 508 million feet.

This would make an average daily cut for the old growth operators of about 30,000 feet, without figuring in those who cut part old and part second growth. Some cut much more, some cut less.

(Tomorrow: Lane's Cut Largest)

Professor Moll left Eugene in September to return to his native Australia to study the aborigines and Australian exploration. He made the difficult 2000-mile trip south-to-north through the "red center" of the island continent, coming out near Darwin. It was on this Northern coast that he lived with the aboriginal tribe, after receiving special permission from the Australian government.

Finishes Book

While "down under" he finished his latest book "The Water Hole," a volume of 100 sonnets on Australian development. It will be published this year by an Australian firm. Another volume of verse, "Beware the Cuckoo" which he wrote before the war, will also be published in Australia.

Full term he will return to his teaching job on the campus. He emphasizes that he will not teach in either summer session, preferring to putter around in the garden of his Franklin Blvd. home, read a little, and organize the extensive notes on his trip.

Recalling his days with the native tribe, he says he remembers their food particularly. They live largely on fish, he says, and they don't prepare the fish in any way before cooking. Nor do they cook them much. The resulting dish is little more than warmed meat—"with innards."

"Innards," he points out, "are a real delicacy."

"Hard on the belly, though," he admits. The Australian memory of the American soldier is "kindly," he reports, with only a little hard feeling remaining in some of the cities where Yanks were concentrated in the early months of the war.

The labor government in England has proved popular with the Australians, Professor Moll found, partially because the Diggers had instituted many of the Attlee ministry's reforms in their own land years before. For example, the government has owned the railway system for many years, and has developed a remarkably efficient system, much like the old German Reichsbahn.

DOW JONES AVERAGES

Dow Jones closing bond averages:

- 40 bonds, 103.35, up 0.10.
- 10 higher grade rails, 109.95, up 0.12.
- 10 second grade rails, 91.44, up 0.36.
- 10 public utilities, 107.61, off 0.04.
- 10 industries 104.39, off 0.06.

Many wine bottles are made of colored glass to protect their contents from light.

IT'S ALWAYS Pageant time for the whiskers which sprout on Professor E. G. Moll's face—they haven't been sheared off in 15 years, according to an article in the University of Oregon's weekly "Summer Sun." (Wiltshire engraving).

Pageant Posters 'Snapped Up' By Coast Transportation Firms

Pageant posters have been snapped up with an avid showing of interest by several advertising agencies and many coast and nationwide travel lines, and information about the Oregon Trail Pageant—Lane County Centennial—is now being displayed up and down the coast, in train, bus and air terminals and in folders and on the air.

MacWilkins, Cole and Weber, Portland advertising agency, has informed Horace Robinson, Pageant director, that the Pageant will be featured on Fields' Chevrolet Co.'s "Oregon Album" program July 20 from 2:30 to 3 p.m. over KGW.

Adolph L. Block is including Pageant publicity on all Dr. Semler spots from local stations and will include them in Portland broadcasts the week before the Pageant.

Southern Pacific is displaying Pageant posters in stations, running advertising in the Oregon press, carrying stories in their "Inside Track," and arranging a display in the Sixth and Yamhill windows in Portland.

Pacific Greyhound Lines have Pageant posters on display in their depots all over the coast and will

include mention of the Pageant in their "Romance of the Highways" program with Command Scott.

West Coast Trailways, Pacific Trailways and United Air Lines all have started displaying Pageant publicity in their terminals up and down the coast.

'Disks' Mystery Grows Deeper

(CONTINUED FROM PAGE 1)

tory said none of its trained observers had seen the disks and that none of the photographic plates of night skies have recorded them thus far.

Reports that saucers landed on a mountainside near St. Maries, Ida., went unsubstantiated Monday after an aerial search by planes of the 116th Air National Guard Fighter Squadron.

The Army, the Navy, and the Atomic Energy Commission all disclaimed any connection with the mystery. An Army Air Forces spokesman in Washington said the AAF had been checking the reports but hadn't the slightest idea what they could be.

At Lewiston, Ida., hundreds crowded the streets Sunday for a look at what weather observers said were clouds of seeds being blown by the wind.

An excited Chicago woman reported that she had seen a flying saucer with legs. "I was standing on my porch and I thought for sure it was coming right down and slap me in the face," she said.

A Denver man claimed he had seen a saucer with an American flag flying overhead there.

A Tempe, Ariz., man said he saw a saucer two feet in diameter disappear behind a row of trees near his home. When he and his wife rushed to the spot, he said, the flat, thin, (and shy) aluminum disk took off at a "high rate of speed" toward Phoenix.

the saucers as "America's answer to the Loch Ness monster" — a legendary sea serpent which is reported seen at intervals in a lake in Scotland.

Scientists asserted that the objects in order to be seen clearly at 10,000 feet—the level at which most of the saucers have been reported—would have to be 20 feet in diameter, would require a large mass of metal, would be more conspicuous at night and would be seen by a far greater number of persons.

Two More Arrested On Assault Query

Closing a week-long search by the sheriff's office, Arthur J. Bailey, 23, and Oscar D. Bailey, 18, both of Eugene, were arrested Saturday in connection with a case of assault and robbery.

Edward Ripenour, 20, also of Eugene, was arrested by sheriff's deputies June 28, in connection with the same case.

It was alleged that the two Baileys and Ripenour beat and robbed Kenneth C. Mangrum on June 28.
