

DORENA DAM PROGRESS is anxiously watched along with other 19 dams in the Willamette Basin flood control project. View shows spillway work underway with gantry crane in position to hoist cement buckets from railway trucks to forms where workmen want to place them. The dam will be earth and concrete, the latter including spillway and the adjacent non-

Northwest Watches Closely Progress on Valley's Dam

Flood - conscious Northwest watches with interest the progress of a system of storage dams and reservoirs along the main stem of the Columbia river and numerous tributaries of the Willamette, many in Lane county.

Dr. O. E. Walsh, district engineer, corps of engineers, said recently: "The multiple-purpose of the system of dams in the Willamette river valley is to protect the area against the ravages of flood similar to that of the Columbia river this year and to conserve water for beneficial use as well as the development of navigation, power, irrigation, pollution abatement and other incidental benefits."

"Already completed are the Cottage Grove and Fern Ridge dams. Under construction are Dorena, Detroit and Lookout Point dams. Fourteen other flood control dams are planned for the Willamette valley."

"Although the corps of engineers' comprehensive plan for the Columbia basin provides for storage for flood control as well as local protection projects the river does not now possess reservoirs regulating its stream flow."

"Other projects proposed would have reduced this 1948 flood by nine feet, which would have put it

in the 'essentially no damage' classification."

In addition to 19 dams, the Willamette project includes plans for 171 revetments totaling 50 miles in length to prevent soil erosion, and considerable bank work. Revetments and bank work will keep logs and debris from hanging up and ease the problem of winter freshets.

Flood terrors on Row river, tributary to the Coast fork of the Willamette, will be minimized with completion of Dorena dam in July, 1950.

The classes began last Monday and will be continued next week, Hines reported Saturday. Dr. Rex Putnam, superintendent of public instruction in Oregon, is also teaching a class in school organization at the OCE summer sessions.
