

Ghost Village Found in Florida

FORT LAUDERDALE, Fla.—(AP)—An abandoned village with human bones strewn around has been found deep in the everglades.

Three men from nearby Davie—Hully Stirling, William Hill and L. P. Harvey—made their way to the ghost village and brought back a report of their find, the Fort Lauderdale Daily News said.

The village, located on a high hammock, once contained about a dozen buildings, including a sugar mill, the men reported.

Bones of humans and animals, broken canoes, bits of pottery, copper caldrons, and "every conceivable kind of debris" was scattered among the rotting buildings, they added.

All the buildings were of cy-

press, held together with and-wrought nails of copper and bronze.

Stirling, a war-time pilot, first sighted the village from the air. The trio then went as far as possible toward the spot in a flat-bottomed boat equipped with an airplane propeller to skin over the shallow water. They they hacked their way through thick foliage and jungle growth.

Stirling said the site is about 10 miles from the intersection of U.S. Highway 27 and state road 84, 30 miles west of Fort Lauderdale.

Supersonic Air Progress Told

CLEVELAND — (AP) — Aircraft able to fly at supersonic speeds for sustained periods are imminent, top government research experts told leaders in civil and military aviation this week.

Supersonic speed — meaning faster than sound, which under average surface air conditions is 761 miles an hour—has been achieved many times in the X-1,

a rocket-powered research craft. But the X-1 has fuel for only 2½ minutes at full power. Its dashes beyond the limits of sound speed are measured in seconds.

The approach of sustained travel in the supersonic range was discussed briefly during the third annual inspection of the National Advisory Committee for Aeronautics flight propulsion laboratory. Officials did not say how long they meant by "sustained" or how soon they meant by "imminent."

More than 1000 representatives of the defense department and other government agencies, aircraft, engine and equipment man-

ufacturers, and air research organizations were invited to the showing of the progress achievements. The \$300 million station is devoted to power plants for missiles. The X-1 has reached 6,000 miles an hour at very altitudes—something over 50,000 feet. Nearly two-thirds of weight is fuel which rocket motors burn at about one to a minute.

The nation's production of goats' milk is valued at \$100,000,000 a year.
