

A STATEMENT TO THE VICTIMS OF OREGON'S WORST STORM IN HISTORY:

Last Friday evening, Oregon was subjected to the tremendous forces of nature and once again Red Cedar Shingles proved to be a superior roofing material.

After being battered by all the devastating fury of the hurricane force, it was discovered that hardly any roofing damage was incurred in those homes roofed with with Red Cedar Shingles.

This substantiates the findings at the University of Wichita who subjected a standard section of cedar shingle roof to the force of 136 mile winds in their giant wind tunnel. Not a single shingle was loosened.

Despite the pressure of back-orders from our out-of-state customers, as of this week, the Huntington Shingle Co., Inc. is diverting its entire production to this distressed area, to provide this proved superior product for the replacement of storm damaged roofs of imitation shingles. These cedar shingles will be available through lumber yards and distributors at economical prices, throughout this area. And remember—with durable Red Cedar shingles, the same insurance rates apply in Oregon as with imitation shingle. Contact your local yard for information on application and costs.
