REVEALED: The Top 3 Most Instagrammable Houseplants

By Search Intelligence

The Aloe vera plant is the most Instagrammable houseplant, with over 5 million posts on the platform

In second place is the Agave plant with just under 2 million posts

Haworthia takes the third spot with just over 800 thousand Instagram posts

New research has revealed the most Instagrammable houseplant, with the Aloe vera plant, taking the top spot in the rankings.

The research conducted by Hollywood Hills real estate experts RubyHome established the most common houseplants and succulents on Instagram and analysed the number of hashtags for both the scientific name of each houseplant and the more commonly used names.

The analysis revealed that the Aloe vera plant (scientifically known as the Aloe barbadensis miller) had the highest number of hashtags on

@aloe_wrld, Lagos, Nigeria

Instagram, making it the most Instagrammable. The plant has 5,155,019 combined hashtags on the platform to date. The plant has been a household favorite for centuries due to its medicinal and cosmetic purposes. The Aloe Vera plant secures its top spot by totalling over five million posts on Instagram from the use of the following hashtags: '#aloebarbadensis miller', '#aloevera', '#aloeveraplant', and '#aloevera-succulent'.

Agave Americana, otherwise known as Agave, places second with 1,835,178 posts on the platform. Agave

plants have a multitude of uses, but their main benefit is that their sap and juices can be used to treat many gut-related issues. It is also rich in nutrients which is why many see it as a more natural alternative to honey and sugar.

The third most Instagrammable plant is the Haworthia plant. Scientifically known as Haworthiopsis attenuata, the plant has a total number of 824,048 posts on Instagram. The plant's popularity is due to its ease of care, as it can tolerate many different lighting conditions and can last long periods in dark spaces.

Motown: The Sound of Young America Debuts at the Oregon Historical Society Friday, September 23

The Skanner News

The 1960s was one of the most musically diverse decades in American history. While The Beatles and Bob Dylan topped the charts, a unique sound out of Detroit also shaped the musical landscape. It originated on the city's streets and in its housing projects, reflecting seismic shifts in not just pop music, but in racial attitudes and youth culture. Motown: The Sound of Young America, on view at the Oregon Historical Society in downtown Portland from September 23, 2022, through March 26, 2023, shares the story of the famed record company and the artists who collectively changed the musical direction of the nation.

Berry Gordy, Jr., was the visionary behind both the music and the Black-owned record company he named Motown. A former prizefighter and songwriter, he believed that talent could

be found on nearly every Detroit streetcorner. This blend of gospel, blues, and pop quickly became "The Sound of Young America," crashing the American pop charts and challenging the British Invasion. From Motown came the Supremes, Stevie Wonder, the Temptations, Smokey Robinson, Gaye, the Jackson 5, and others.

Curated by the GRAMMY Museum, this dynamic, engaging exhibition was originally created in 2019 in honor of the 60th anniversary of Motown Records, and has since been expanded to feature Motown Re-

cords' move to Los Angeles and highlight the new young talent on Motown's current roster.

Motown: The Sound of Young America features stage outfits from many of the label's top performers, interviews with Motown legends, and opportunities for visitors to get deep inside the creative process perfected at Motown.

Visitors will also experience interactive displays, including an opportunity to perform the Supremes' "Stop! In The Name Of Love" on stage and learn the Temptations' signature dance moves.

Whole-patient care for our whole community of kids.
