THE EMPEROR HARVEST AND TWINE WADE

The EMPEROR harvest and Wade's Portland, Ore., patent, for the "RAISER OF GRAIN," a device for raising grain and other crops above the ground, has been patented.

The device, which consists of a framework with a series of elevated platforms, is designed to facilitate the growth of crops by allowing them to be raised above weeds and other obstructions. The inventor, Wade, claims that the device will improve the efficiency of crop production and reduce the need for manual labor in farming.

The EMPEROR harvest and Wade's patent also includes a "RAISER OF GRAIN" for use in conjunction with the device, which is designed to help farmers to harvest their crops more efficiently.

The EMPEROR harvest and Wade's "RAISER OF GRAIN" is available for purchase through their website at www.emperorschrimp.com.
