## THE MAGNET CASH STORE

Clements & Wilson, Court and Cottonwood

MOODAY, MAY 21, 1900

DAILY, WEEKLY AND SEMI-WEEKLY East Oregonian Publishing Company, PENDLETON, OREGON.

Table with subscription rates for Daily, Weekly, and Semi-weekly publications, including single copy and advertising rates.

As proposed in the bill, says the report, are graded according to the speed and capacity of ships, and are more than twice as high per ton of capacity for the swift passenger steamers, which carry but little cargo, as for ordinary freight steamers, which carry 80 or 90 per cent of our exports. The subsidy, therefore, if it affects rates at all, will affect passenger rather than freight rates. As only about five per cent of the total tonnage of the world's shipping is subsidized, and as nearly all of the present subsidy goes to passenger and mail steamers, the hopelessness of trying by subsidy to lower freight rates and increase commerce is apparent. The ship subsidy bill borders pretty near on a steel.

### MATTERS POLITICAL.

The Portland ring is becoming interested in Union and Willamette counties. During the present week, Captain S. C. Spencer, a more or less conspicuous camp follower of the Corbett-Simon regime has been in La Grande, says the Chronicle, on a still hunt, looking for places where money would do the most good. The captain, is one of those genial gentlemen who every two years assist in the pleasing vocation of eliminating one of banker Corbett's legs. Mr. Spencer will spend some time in Union and Willamette counties. He is an advance agent of prosperity, as it were. Any one having a tale of woe to impart and a yearning to get near the lung hole of Corbett's barrel at the time it is expected to spring a leak should meet Spencer.

But Spencer, although a host within himself, and somewhat of a warbler on the stump as well as being a slip-devilish as Joe Baystock—as a silent worker in the Simon vineyard as much per work—is not to blission alone in his session. He is a member to the urgent appeal of the local boss, who sees defeat staring him in the face—Wallace McCamant is to stump Union and Willamette counties. Not to know McCamant, not to have heard his name, is to have lived in vain. McCamant is an earnest man. He is the most faithful headman in all the Simon gang. He is for the gold standard, and an ever increasing, interest bearing, gold demanding national debt—just extended for thirty years by the McKinley administration as the bankers continue to pump the people with money. He is for the British. He just literally ghosts over the prospective destruction of the two South African Dutch republics. He is for Corbett—as long as the barrel holds out—and as long as the old moneybags seem to delight in the jeering. He is humbly subjected to. But McCamant is coming and can speak for himself.

Now, if the people will be real good, we can expect a visit from young Dunway, who ever since he was a toddling infant has indulged in the illusion of thinking he was thinking Dunway will come and bring his blackboard, and dig the Niagaragan canal again. This is Dunway's strong suit. He has been digging that canal for years. Perhaps this is the reason why McKinley will not permit an appropriation for the purpose—he knows that Dunway will dig it, in time.

Then, last but not least, the confidential adviser and bosom crony of Joe Simon—the great Graham Glass—the weak holder—may come. His visits are strictly business. His ways come with the "stuff" and places it where it will rebound to the benefit of his boss and incidentally to the benefit of Glass, himself.

The people of Union and Willamette counties will have an opportunity of meeting some—perhaps all—of these faithful attendants and hangers on of the Portland ring; then they will have an opportunity of going to the polls and electing Justice Wade, joint senator, J. S. Beavis, joint representative for the past nine years of the Union county. These men are running in the interest of the people of this section, are honest, conscientious, stalwart men—they don't have to be belabored up by the hirings of the Portland ringsters—they are not fanatically telegraphing for new taxes. They rest in the confidence of the justice of their cause, and in the knowledge of the fact that the people will resent the inference that these Eastern Oregon counties are but a suburb of Portland and the political property of an corrupt gang as ever disgraced a state.

### BULLETIN ON IRRIGATION.

The department of agriculture has in press an interesting bulletin prepared by Prof. B. C. Buffum, showing the results of his irrigation experiments for the past nine years at the Laramie, Wyoming, experiment station. Professor Buffum states that the time has now arrived when many irrigated districts have so far developed that scarcity of water is keenly felt, and the good of the community demands that there shall be no unnecessary waste of the limited supply. The knowledge lacking in irrigation, and which must in some way be obtained before our water supply will be either wisely or correctly used, is how much water is required to secure the best results, and when and by what means it can be most economically and efficiently applied.

Some of the experiments have been made with a view to determining the effect of the use of a greater or less quantity of water upon the crop return of a given area. Professor Buffum presents tables showing the crop returns from various plants on which

different quantities of water were used, but they are not conclusive and more experiments are needed. In general, however, the tables show larger yields where the larger quantities of water were used, but the increased yields are not in proportion to the increased quantities of water used. The varying conditions affecting the quantity of water needed by crops are fully discussed in the bulletin. Most plants cultivated in the arid West were introduced from more humid regions, and are not economical in their water requirements. Selections of drought-resisting varieties may make possible a great extension of the present irrigated area. Methods, too, of cultivation and irrigation have much to do with the quantity of water used. Flooding as a rule requires more water than irrigating in furrows, and it has been observed that grass and grain, which are usually irrigated by flooding, produce more thrifty growth on ditch banks and higher ridges, and small where the roots are supplied from beneath rather than from the surface. This fact has led in some localities to the adoption of the drill system with such crops as cover all the land.

The Laramie river is a type of many of the western rivers whose waters are used for irrigation. Professor Buffum's tables and diagrams show that the river furnishes the greatest supply of water in May and the early part of June, and that all crop except native hay require the most water later in the season—the latter half of June and the first half of July. This means that irrigated farming along the Laramie river must be limited to native hay and the small area of other crops which can be irrigated with the summer flow of the river. Unless the spring floods are stored for the use of those crops requiring later water. In Wyoming this is not so great a hardship as a like condition would be in some other states. The fact that the greater part of the land in that state is beyond the use of water makes stock raising the leading industry of the state, and the great need of that industry is winter feed for the stock which runs on the open range during the summer months. But native hay as a light crop when irrigated and stored for winter use would make it possible to cultivate an increase of area of other large crops which yield much more heavily than native hay.

Professor Buffum emphasizes the fact which is brought out by almost every recent writer on irrigation that the present system of raising irrigated crops by the use of a continuous flow of a stream of a given size is not necessary and is moreover wasteful. He shows that some systems of rotation by which the water is used for a few days for short periods during the season will more nearly correspond with its needs and result in a great saving of water. The bulletin can be obtained by applying to the secretary of agriculture.

The preservation of many of the farms on the lowlands is really dependent upon the forestation of the mountains and the irrigation of the arid regions. As it is now the water from the melting snows and ice of Colorado Rockies, instead of being stored where it is needed, sweeps down through the arid region, rocky channels washes away farms in Kansas and Nebraska, and breaks through the levees in Mississippi and Louisiana, causing incalculable damage to government and private property and loss of human life.

You want to get well. Who doesn't? But you are discouraged. You've tried medicines that promised much but didn't keep their promises. If you want to get well try the medicine that makes people well.

## DR. PIERCE'S GOLDEN MEDICAL DISCOVERY.

For diseases of the stomach and organs of digestion and nutrition, this medicine offers a practically unailing cure. Ninety-eight per cent of all who use it are cured. I cannot express half my feelings of gratitude to you, writes Mrs. J. E. Clark of Enterprise, Shelby Co., Mo. "I had been afflicted with indigestion for twelve years. Had when all through me, such hands cold feet and everything I ate digested me became constipated, and my nerves were depressed and despondent. When I could never be cured, I had when you sent me bottles of Dr. Pierce's Golden Medical Discovery, and my health is now good."

BLANCARD'S PILLS AND SYRUP. IODIDE OF IRON FOR ANEMIA, POORNESS OF THE BLOOD, CONSTITUTIONAL WEAKNESS, SCROFULA, ETC. None genuine unless signed by BLANCARD & CO. ALL DRUGGISTS. F. EUGER & CO., S. V. Agts. for U.S.

FOR Insurance Fire, Life, Accident, Plate Glass, etc.

Loans on City and County Property.

Real Estate Improved and Unimproved City Lots, Stock Ranches and Wheat Farms

# Skin Diseases

When the excretory organs fail to carry off the waste material from the system, there is an abnormal accumulation of effete matter which poisons and clogs the blood, and it becomes sour and acid. This poison is carried through the general circulation to all parts of the body, and upon reaching the skin surface there is a redness and eruption, and by certain peculiarities we recognize Eczema, Tetter, Acne, Salt Rheum, Psoriasis, Erysipelas and many other skin troubles, more or less severe. While the skin is the seat of irritation, the real disease is in the blood. Medicated lotions and powders may allay the itching and burning, but never cure, no matter how long and faithfully continued, and the condition is often aggravated and skin permanently injured by their use.

## The disease is more than skin deep; the entire circulation is poisoned.

The many preparations of arsenic, mercury, potash, etc., not only do not cure skin diseases, but soon ruin the digestion and break down the constitution. S. S. S., nature's own remedy, made of roots, herbs and barks, of great purifying and tonical properties, quickly and effectually cures blood and skin troubles, because it goes direct to the root of the disease and stimulates and restores normal healthy action to the different organs, cleanses and enriches the blood, and thus relieves the system of all poisonous secretions. S. S. S. cures permanently because it leaves none of the original poison to re-form in the blood and cause a fresh attack.

Skin Diseases will be sent free upon application.

Healthy blood is necessary to preserve that clear, smooth skin and beautiful complexion so much desired by all. S. S. S. can be relied upon with certainty to keep the blood in perfect order. It has been curing blood and skin diseases for half a century; no other medicine can show such a record. Our medical department is in charge of physicians of large experience in treating blood and skin diseases, who will take pleasure in aiding by their advice and direction all who desire it. Write fully and freely about your case; your letters are held in strictest confidence. We make no charge whatever for this service. Our book on Blood and Skin Diseases will be sent free upon application. THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

## TO THE WISE

farmer, or those who intend planting their gardens or doing spring work of any kind in this time, you will find everything in garden tools and seed, lawn wire, staples, nails, heavy and light hardware of the very best quality and at the lowest prices at

W. D. Hansford & Co.'s Pendleton, Oregon.
