

The Street Fair

Is not the only attraction in Pendleton; its going to be big and grand, but the Magnet Cash Store's prices are becoming famous and are attracting widespread attention also. If you want big values for little prices the Magnet is the place to go.

A chance for a gold watch given with every dollar purchase.

Of course Denby is for McKinley. McKinley is for Denby. The president gave the ex-minister to China a fat sit on the Philippine commission and it would have been ungrateful in him if he had withheld his gold-democratic support from the republican candidates.

Senator Scott pays a compliment to the old Bay State by remarking that "no one but a speaker whose English is of the best is sent into Massachusetts" and there is a touch of humor in his statement regarding the disposition of misfit party spoils, that the republicans send theirs to Pennsylvania and the democrats theirs to Texas.

The Hindoos, it is said, figure the world as a hemisphere which rests upon four elephants, which in turn rests upon a tortoise, which rests upon water. Of course, the Hindoos never go so far behind the returns as to ask, what supports the water? A fool can ask a question that a wise man cannot answer, and this is true regarding many things in this life as well as the one that it is supposed to follow the one here.

Texas is the first state in the Union to bring to justice those who resort to mob law and engage at times in lynching those accused of crime. Eight men in that state have recently been convicted of murder in the first degree, because they were the principals in the Humphrey lynching in Henderson county, a year ago. These men have been sentenced to the penitentiary for life. Texas has thus set an excellent example to her sister states. It is to be hoped that other states will be quick to follow it.

A presidential campaign is an education. It is well worth what it costs. The American people go to a political school once every four years, much to their profit. A presidential campaign binds all sections of this great country closer together in the discussion of national questions. It enlarges the environment and mental makeup of every citizen that takes an interest in it. It forges good citizenship on the anvil of agitation. It imparts self-respect and adds to the stature of every man, to realize that he is a sovereign citizen of so great a republic. It has a tendency to disseminate wisdom and to make each individual nearer capable of self-government and, to that extent, making government less burdensome to those who recognize the need of supporting it for the purpose of keeping those in check who persist in usurping the rights of others.

An astronomer connected with the government at Washington has figured it out that 3,000,000 more years is the limit of human life on earth. At the end of this time he says the earth will be uninhabitable. If this estimate is correct, man will have an abundance of time to settle up his affairs before bidding a final adieu to this terrestrial sphere. Probably by the time three million years roll around man will be able to navigate the air and migrate to other worlds to conquer. When man makes the airship practical a journey to Mars or to some other ball will be well within the possibilities. It does appear that with knowledge gained from life's experiences man is quite well equipped to meet almost any emergency, particularly so when he is able to figure out three million years in advance the date he should be prepared to skip from this globe by the light of the moon, so to speak.

Of our total exports last year, valued at \$1,394,186,375, European countries, over which our flag does not fly, took

more than \$1,000,000,000 worth, while South America and our new possessions took a fraction thereof so small as to be an almost negligible quantity. The statistics of our foreign commerce, taken as a whole, are the indisputable indices of prosperity, says the New York World. And for that prosperity the nation is not indebted to any political party, but to the natural growth and development of its own splendid resources and to the needs of foreign peoples who have the wherewithal to buy from us. If parties could make and unmake prosperity there would be more respect for the people for those who make policies their profession. If there was a divorce between politics and business the country would be better off and the burdensome politician who is forever seeking office and power would not have such magnificent opportunity to prey upon the people.

A WONDERFUL CENTURY.

During the last one hundred years the world has seen great wars, great national and social upheavals, great religious movements, great economic changes. Literature and art have had their triumphs and have permanently enriched the intellectual inheritance of our race.

Yet, large as is the space which subjects like these legitimately fill in our thoughts, much as they will occupy the future historian, it is not among these that I seek for the most important and the most fundamental differences which separate the present from preceding ages. Rather is this to be found in the cumulative products of scientific research, to which no other period offers a precedent or a parallel.

No single discovery, it may be, can be compared in its results to that of Copernicus, no single discoverer can be compared in genius to Newton; but in their total effects the advances made by the nineteenth century are not to be matched.

Not only is the surprising increase of knowledge new, but the use to which it has been put is new also. The growth of industrial invention is not a fact we are permitted to forget. We do, however, sometimes forget how much of it is due to close connection between theoretic knowledge and its utilitarian application which, in its degree, is altogether unexampled in the history of mankind.

I suppose that at this moment if we were allowed a vision of the embryonic forces which are predestined most potently to affect the future of mankind we should have to look for them not in the legislature nor in the press, nor on the platform, nor in the schemes of practical statesmen, nor the theories of political theorists, but in the laboratories of scientific students whose names are but little in the mouths of men, who cannot themselves forecast the results of their own labors and whose theories would scarce be understood by those whom they will chiefly benefit.

I do not propose to attempt any sketch of our gains from this most fruitful union between science and invention. I may, however, permit myself one parenthetical remark on an aspect of it which is likely more and more to thrust itself unpleasantly upon our attention.

Marvelous as is the variety and ingenuity of modern industrial methods, they almost depend in the last resort upon our supply of useful power; and our supply of useful power is principally provided for us by methods which, so far as I can see, have altered not at all in principle and strangely little in detail, since the days of Watt.

Coal, as we all know, is the chief reservoir of energy from which the world at present draws, and from which we in this country must always draw; but our main contrivance for utilizing it is the steam-engine, and, by its essential nature, the steam-engine is extravagantly wasteful. So that, when we are told, as if it was something to be proud of, that this is the age of steam, we may admit the fact, but can hardly share the satisfaction.

Our coal fields, as we know too well, are limited. We certainly cannot increase them. The boldest legislator would hesitate to limit their employment for purposes of domestic industry. So the only possible alternative is to economize our method of consuming them. And for this there would indeed seem to be a sufficiency of room.

Let a second Watt arise. Let him bring into general use some mode of extracting energy from fuel which shall cost only 50 per cent of it, and to you coal fields, as sources of power, are dothed at once. The hope seems a modest one, but it is not yet fulfilled; and therefore it is that we must qualify the satisfaction with which at the end of the century we contemplate the unbroken course of its industrial triumphs.

tion of the earth till, in the sequence of the ages, these also begin to fail.

With such remote speculations we are not now concerned. It is enough for us to take note how rapidly the prodigious progress of recent discovery has increased the drain upon the natural wealth of old manufacturing countries, and especially of Great Britain, and at the same time frankly to recognize that it is only by new inventions that we can mitigate the old inventions; that to go back to the old is impossible; that our only hope lies in a further advance.

No century has seen so great a change in our intellectual apprehension of the world in which we live. Our whole point of view has changed. The mental framework in which we arrange the separate facts in the world of men and things is quite a new framework.

The spectacle of the universe presents itself now in a wholly changed perspective. We not only see more things differently, but we see differently. The discoveries in physics and in chemistry, which have borne their share in this recreating for us the evolution of the past, are in progress of giving us quite new ideas as to the inner nature of that material whole of which the world's traversing space is but an insignificant part.

Differences of quality once thought ultimate are constantly being resolved into differences of motion or configuration. What were once regarded as things are now known to be movements. Phenomena apparently so widely apart as light, radiant heat and electricity, are, as it is unnecessary to remind you, now recognized as substantially identical. From the arrangements of atoms in molecule, not less than their intrinsic nature, flow the characteristic attributes of the compound.

The atom itself has been pulverized and speculation is forced to admit as a possibility that even the chemical elements themselves may be no more than varieties of a single substance.

ARTHUR BALFOUR.

POLITICAL POINTS.

B. H. Odell is Senator Pratt's choice for governor of New York and he will probably be the candidate, as Pratt is "boss" of the party in the state.

John G. Woolley, presidential candidate of the prohibition party, will speak at Portland September 5. Although not expecting to carry Oregon, the prohibitionists are energetic in this year's campaign.

Senator Beveridge, of Indiana, will begin his speaking tour in Chicago September 25. He will then continue throughout the Northwestern states. Senator Allison will speak in Colorado and Idaho. Senator Dooliver, of Iowa, and Senator Callum will confine their canvass principally to their own states.

Theodore Roosevelt will start from Chicago, September 11, and speak in Wisconsin, South Dakota, North Dakota, Montana, Idaho, Utah, Wyoming, Colorado, Kansas, Nebraska, and Iowa. On September 17 he will speak at Helena, Mont.; September 18, Butte, Mont.; September 19, Pocatello, Ida. He will not visit Oregon, Washington and California.

The administration of Governor Rogers has been the best in the state's history. It has been singularly free from scandals and defalcations. The state's finances were never in better shape, and the state's credit was never higher. The various public institutions have been managed with admirable economy and sound judgment. The Spokesman-Review thinks his renomination for governor was, therefore, deserved.

A Happy Mother

Frolicking with her baby makes one of the prettiest spectacles ever seen in the home. But nothing is sadder to see than the unhappy mother, weak and nervous, striving in vain to hush the cries of her weak and nervous babe. There can be no happiness for either mother or child without health. Doctor Pierce's Favorite Prescription "has done wonders" for many a woman, by restoring her health and opening for her the way to happy motherhood. This really wonderful medicine is not a cure-all. It is a preparation specially designed to cure diseases peculiar to women. It dries debilitating drains, heals inflammation and ulceration, cures female weakness, and removes the causes which generally make women nervous and sleepless.

There is no alcohol in "Favorite Prescription" and it contains no opium, cocaine or other narcotic.

Mrs. James W. Backer, of 609 Catherine Street, Syracuse, N. Y., writes: "Your medicine has done wonders for me. For years my health was very poor. I had four miscarriages but since taking Dr. Pierce's Favorite Prescription and Golden Medical Discovery, I have much better health, and now I have a fine healthy baby."

Use Dr. Pierce's Pleasant Pellets with "Favorite Prescription" if the bowels are inactive or irregular.

A Lesson in Health

WHATEVER the apparent cause of your ill health, are you absolutely certain that the real, underlying cause isn't disorder in your kidneys? Nine chances in ten it's your kidneys that need attention, if the real root of your poor health is to be reached. Treating your stomach, your liver, your blood, your heart or your nerves, is to treat symptoms only. Treating your kidneys is to reach and remove the cause of disease.

If you neglect disorder in the kidneys you'll have diabetes, Bright's disease, gravel or other serious and usually fatal complaint. Fayer's Kidney Cure is absolutely guaranteed for all kidney disorder. You run no risk. Try it to-day.

BOREY BANNER SALVE will heal it.
