intentions at the start were entirely for their good and that we were to act as a great big, generous brother to them, but they soon found out otherwise, with the result that they have fought against our supremacy over them as they fought against Spain's "iron heel" before us, and they will continue to fight to the end. If they could be made to understand that they were to be treated as we have promised to treat them, in the most equitable manner, in reduction of time between the laying of a keel and the launching of a vessel have been made in British shipyards. The battleship Hulwark is a notable example. Her keel was laid March 29, 1899, and she was launched at the Devonport dockyard Oct. 18, 1899, less than seven months later. Nine months and nine days intervened between the laying of the keel and the launching of the battleship Canopus of 12,500 tons displacement. The cruiser Diadem, a steamed vessel of 11,000 tons, fitted with all her armor casemates, was launched after 214 working days. Neither Germany nor the United States can show similar records, though the United States has several plants rapidly coming to the front.

It Has Never Failed

Mr. C. S. Peaslee, the well-known druggist of Morgan City, La., is highly thought of in his neighborhood because of his skill and care in filling prescriptions. The best physicians in the place send their patients to his store whenever they can. Any one such as Mr. Peaslee may say can be depended upon absolutely. In a letter to W. H. Hooker & Co., New York City, proprietors of Acker's English Remedy, he says: "In all my many years' experience as a druggist, I have never handled a medicine of any nature that gave such complete satisfaction as Acker's English Remedy for Throat and Lung Troubles. I have sold hundreds of bottles, and have yet to learn of a single case in which it failed to cure. In my shop, it acts with a certainty that is really marvelous. My wife does not take much stock in medicine, but she has absolute faith in Acker's English Remedy, always having it at her elbow in case the children are attacked by croup at night. It is a positively harmless remedy, as I can personally testify. I know of a little girl who accidentally drank a whole bottle. She was, of course, sick at her stomach for a short time, but the sickness passed away, and then the child was in better health than ever before. I can understand why Acker's English Remedy is so efficacious, because I am a druggist. It is not a mere expectorant, but a strengthening, invigorating tonic as well. While it heals the irritations of the mucous membrane, it also builds up the constitution and purifies the blood. I endorse it absolutely."

Sold at 25c., 50c. and \$1 a bottle, throughout the United States and Canada; and in England, at 1s., 2s., 3s., 4s., 5s., 6s. If you are not satisfied after buying, return the bottle to your druggist, and get your money back.

We authorize the above guarantee. W. H. HOOKER & CO., Proprietors, New York.

Paris. 1889
Chicago 1893
Paris. 1900

The czar of Russia is reported as recovering from his spell of sickness, after being attended by a dozen or more doctors and specialists. Under these circumstances his recovery is somewhat remarkable.

There are about 17,000,000 pupils attending schools, elementary and higher, public and private, in the United States. In other words, fully one-fifth of the entire population of the United States is either learning or teaching in the common schools.

Reported fears that a gold mine at Cripple Creek is worked out, develop a fact that throws additional light upon the balance of trade theory. It discloses one of the items that go to swell that export balance of which the administration is so boastful. Much of the stock of the mine in question is held in London. Consequently every dividend has enhanced our exports without affecting our imports. It was an outgo without corresponding income. This is a startling example of what excessive exports mean. The "balance of trade" can sometimes be apparently in our favor, when really it is against us.

The official counts of the vote of the late presidential elections are bringing out some odd gains and losses. In Arkansas 28,961 democrats who voted for Bryan in 1896 failed to vote for him in 1900. In Connecticut 17,257 voters who did not support Bryan in 1896 voted for him in 1900. In Maryland Bryan received 17,536 more votes in 1900 than in 1896. In North Carolina Bryan's vote fell off 16,755 as compared with 1896. It is to be noted that the McKinley vote in North Carolina also fell off 22,192. The Southern voters generally manifested much less than their usual interest in the election. With the negroes practically disfranchised the result was too much of a foregone conclusion.

The "cut and dried" reports being received in this country from the Philippines cause Ambrose Bierce, the widely known newspaper writer, to make a few timely comments, that are like the bee in one respect, for they carry honey on their stingers: "According to the first uncensored news by cable from Manila, General Grant, after a sharp engagement" has destroyed two hundred insurgents, dislodging large quantities of provisions and ammunition. The American forces lost one man killed and twelve wounded; the loss of the enemy being fifty killed—no wounded. The insurgents carried off their dead." This they always do, but that does not prevent our fellows from counting them. The chief element of our military strength in the Philippine archipelago is the counter behind the gun. From the official reports it can be roughly figured that since the beginning of the war we have had the courage and address to kill about a half million Filipino soldiers, mostly belonging to a single "tribe." And still they come up to be killed, and still they are carefully counted. The only explanation seems to be that they are carried off, not by their comrades, but by their legs."

In the enumeration of the results of the election President McKinley placed "peace and beneficent government under American sovereignty in the Philippines" at the head of the list. This is more of a hope with the president than a realization, with General MacArthur asking for more "force" in the islands and the fact staring the world in the face that American arms have made no progress against the insurgents for "peace" or "beneficent government." The fact is, we fooled those people into believing that our

injury to trees, Western people at first opposed government reserves, but the bitter opponents now see the value of state guardianship of the forests.

Events of the last few years have forced upon naval architects the need of more expeditious work in the construction of war vessels, and especially battle ships. The complexity of design of the modern fighting vessel lengthened the time required for building. Many government officers not acquainted with technical details regarded the increased time with impatience. This feeling of dissatisfaction aroused the shipbuilder and the practical men of the industry to remedy conditions. What has been accomplished is shown by the records for time economy in battleship construction which have been made during the last two years in British and American yards.

Speed figures largely as an element in the success of the shipbuilder. Waldon Fawcett, writing of "Rapid Battleship Building" in the Popular Science Monthly for November, says a Philadelphia company obtained contracts from the Russian government for the construction of a battleship and cruiser because it was able to guarantee delivery within thirty-three months, while French builders would not promise completion before five years. Some of the most remarkable records in reduction of time between the laying of a keel and the launching of a vessel have been made in British shipyards. The battleship Hulwark is a notable example. Her keel was laid March 29, 1899, and she was launched at the Devonport dockyard Oct. 18, 1899, less than seven months later. Nine months and nine days intervened between the laying of the keel and the launching of the battleship Canopus of 12,500 tons displacement. The cruiser Diadem, a steamed vessel of 11,000 tons, fitted with all her armor casemates, was launched after 214 working days. Neither Germany nor the United States can show similar records, though the United States has several plants rapidly coming to the front.

"Is a Timber Famine Imminent?" receives an answer in a recent copy of the Forum. Fully one-third of the area of the United States, excluding Alaska and the recent acquisitions of territory, is wooded. By the term "wooded" are included all lands covered with trees in all stages of growth. Two-thirds of this area is in the eastern part of the country, extending from the Atlantic coast to the prairie regions, including the lake states, and one-third is in the Rocky mountain and Pacific states.

In the east the timber consists mainly of conifers, pines, spruces and hemlocks. In the northern districts is found all the remaining supply of white pine. To the south hardwoods become more abundant. In the thickly settled parts of the east the merchantable timber has been cut away, leaving young trees suitable for firewood.

Western timber is composed almost entirely of conifers. Forests on the western coast probably are the densest and heaviest on earth. They may be compared with those of tropical regions, such as the forests of the Amazon and Congo basins. White the jungle of the tropics may be denser, the trees are by no means as large, nor do they contain as much lumber. Favorable climatic conditions, a cool, uniform temperature, with slight variations between the seasons, copious rainfall and a humid atmosphere account for the luxuriant growth. This heavily timbered area extends in Oregon and Washington from the crest of the Cascade range to the Pacific coast.

To give an appreciation of the density of these tracts, the writer in the Forum resorts to figures. He says: "In the white pine forests of Minnesota a heavy stand of timber contains from 5000 to 10,000 feet an acre. The yellow pine regions of the South contain on an average, about thirty feet an acre, and 5000 is a large stand. Upon the Pacific coast a stand of 5000 feet an acre would not be regarded as worth lumbering; a stand of 10,000 feet is light. There are whole counties in which the stand averages 30,000 feet." Townships are given whose average stand exceeds 50,000 feet, and there are square miles whose stands exceed 100,000 feet an acre.

In 1890 the timber cut was 50,000,000 feet, and since then the annual cut has increased. As a random statement it may be said that we have timber in our country to last the present generation of industry nearly two centuries. Even then the end would not come. It is estimated that each year the average acre of woodland adds a third of a cord by growth. If waste could be reduced to a minimum the prospect of a continuous supply of timber would be good.

Fires and wasteful lumbering are the principal sources of waste. Fires can be prevented, only 60 to 75 per cent of a tree is now utilized as lumber. The waste, left on the ground about the roots of young trees burned and in this way the seeds for future trees and the young saplings are destroyed. Methods of lumbering must be changed to conserve the forests.

Forest reserves have a total area of 70,945 square miles and are larger than the state forests of Europe. The government owns and controls this valuable territory. Rangers patrol the forests and timber harvesting is regulated by law. Prospecting and mining may be carried on freely and grazing is permitted where there is no

ECZEMA.

That torturing and disgusting disease has its cause in an impure condition of the blood. The impure condition of the blood often arises from a diseased condition of the stomach and allied organs of digestion and nutrition. When digestion is imperfect, the nutrition of the body is inadequate to its needs. The blood becomes thin, poisons accumulate in it, and these poisons often manifest themselves in some eruptive disease.

Doctor Pierce's Golden Medical Discovery cures diseases of the stomach and other organs of digestion and nutrition. It eliminates the poisonous substances from the blood, purifying it and increasing its quantity and richness. The "Discovery" cures perfectly diseases which originate in a diseased condition of the stomach.

"The 'Discovery' is absolutely a non-alcoholic and non-narcotic medicine. There is nothing 'just as good.'"

"For three years I have suffered with that dreaded disease, eczema," writes Mrs. J. Koepf, of Herman, Oregon. "I tried Dr. Pierce's Golden Medical Discovery, which I did, and after I had taken fourteen bottles I was permanently cured. I had never before stopped taking your medicine and it has never appeared since. I think your medicine a wonderful cure and hope others suffering as I did will take it and be relieved of their suffering."

Doctor Pierce's Pleasant Pellets are powerful aids to the cleansing of the clogged system. By all dealers in medicine.

Cuticura SOAP

For Sanative Uses.

Its remarkable, emollient, cleansing, and purifying properties, elevated from the great skin cure, warrant the use of CUTICURA SOAP, in the form of lozenges for annoying irritations, inflammations, and chafings, for too free or offensive perspiration, and also in the form of internal washes and solutions for the treatment of various sensitive, and itchy eruptions which readily suggest themselves to women, and especially to mothers. The use of CUTICURA SOAP will suggest itself in the severest cases.

Sole Dispensers: THE WORLD, PUBLISHED BY D. AND C. GARDNER, PHOENIX, ARIZONA. CUTICURA SOAP, MADE IN U.S.A.

in the endless chain of racial development one link that of inventive genius, was said to be missing in the negro's scheme of progress. So Edward G. Alexander writes in the November number of Howard's American magazine, which is devoted to the interests of the colored race. Great achievements must be made along mechanical lines to insure lasting greatness to a people. The negro race had been deficient in mechanics for the reason that necessity had not forced it to develop in that direction.

Eugene Burkin's rapid-firing gun, recently invented, gives proof that ability is not lacking. Burkin is a young negro living in Chicago, and his invention is reported to be the most remarkable fighting arrangement of the century. Admiral George Dewey said this gun would affect future warfare in a great degree.

"Fruit Growing in America," by Theodore Dreiser in the November Harper's, contains novel statements. When New York City celebrated the sign of the treaty of peace in 1814 with a grand banquet, only half a barrel of raisins could be found in the city for the making of plum pudding. Now California alone ships 100,000,000 pounds of raisins. Eighty million dollars' worth of strawberries are grown and consumed in the United States in one season. One million dollars' worth of huckleberries were marketed in New York. Little Delaware and Maryland each sent 4,000,000 baskets of peaches to market, while the figures from Michigan and a large array of other fruit growing states seem fabulous both for quantity and for variety of fruits grown.

injury to trees, Western people at first opposed government reserves, but the bitter opponents now see the value of state guardianship of the forests.

Events of the last few years have forced upon naval architects the need of more expeditious work in the construction of war vessels, and especially battle ships. The Latest and Greatest Victory

To our friends: We greet you with the pleasing information that the WHITE SEWING MACHINE has met with the highest recognition at the great Paris Exposition in having been awarded the GOLD MEDAL. When you consider that at this exposition, the world met in competition with all portance of this award to us, and to you as a user or prospective purchaser of renown, on such an occasion, is conclusive and requires no supporting argument. With the "White" which the world has known so long, and with the simplest and most perfect machine of that type produced, we are confident of our ability to meet and fully satisfy your most exacting sewing requirements.

Yours truly, Jesse Failing, Agent.
