## A COMPARISON.

Upon all sides are heard comments regarding the fitness of H. W. Scott and Joe Simon for the United States senatorship. And the comparisons that are made are unanimous in favor of Mr. Scott. In fact, a comparison between the two is absurd.

Here is Mr. Scott, intellectual, highly educated, strong in his opinions, unswerving in his course, conspicuous in career, deferred to by all people on account of his great ability, famous for splendid accomplishments in his profession, representing the culture, the brains, the character, the history and the future of the state which he has helped to build into a commonwealth.

Here is Mr. Simon, subtle as a politician, cunning in manipulation, fairly good lawyer, known to the world for no one act or measure made into law during a long career as a state senator that makes for the public good, schemer and handler of ward politicians, conspicuous only for his ability to handle practical politics, known only in Oregon and there only as a party boss, and, to end the catalogue of his qualifications to represent the state, with a public record of treachery to the distinguished citizens—Dolph and Corbett—who trusted him with their campaigns, and, pretending to be their friends, took upon his own shoulders the toga he was ostensibly striving to secure for them.

Indeed, comparisons are nearly always odious.

## WEST OREGON BALL LOGIC.

"If eastern Oregon will come to the state convention with a solid front, an undivided delegation, we will give some state offices to them."

This is the concession made by western Oregon politicians anent the issue as to representation in the government of the commonwealth. It bears upon its face apparent liberality, yet is in reality the rankest injustice, and is based upon poor argumentation. As a matter of fact, western Oregon never "comes to the state convention with a solid front, an undivided delegation," and yet, nevertheless, western Oregon always takes to itself all of the state offices.

Eastern Oregon comprises one-third of the state, and constitutes a liberal payer of state taxes. It is entitled to representation, not as a concession by those of the western part, but as a matter of justice. Eastern Oregon demands that this portion of the state have adequate representation, and, if the valley politicians desire to persist in their schemes to defeat the plans for representation from here, it is easily within the reach of eastern Oregon republicans to gather sufficient of votes to hold a balance of power at the state convention. It will be better if a spirit of just recognition of this part of the state animate the state convention. In the game of politics, eastern Oregon at this time holds the advantage, and, if it will, can dictate what shall happen at the state convention.

If Portland citizens equal H. W. Corbett in proportion to their means, the subscriptions to the Lewis and Clark Centennial stock will be easily secured. His $30,000 as the first subscription sends a wave of enthusiasm throughout the northwest states, and augurs well for the project. Let Portland but follow Mr. Corbett's lead and the centennial will become an assured enterprise. Oregon people outside of Portland await with interest to see if Mr. Corbett's liberality will be a criterion by which to judge the prospects for the fair.

Bryant did not know he was writing an "ad" for the Lewis and Clark Centennial when he composed "Thanatopsis," with the immortal lines concerning the land "Where Rolls the Oregon." An Oregon citizen, F. R. Mellis, writing from Buffalo, cites the fact that six million people in this country have read "Thanatopsis," and therefore have read the best advertisement that could be gotten up for the 1905 centennial.

This is the time for sentiment making and expressions as to the coming state campaign. Most citizens and newspapers are bringing forward their views and telling them to the people, and this is right. Discussion should be open and free to all American citizens, whether they be in or out of an editorial chair.

Robert Laing returns to Oregon with praises of our climate and the conditions here prevailing. Mr. Laing but repeats what hundreds of others say when they experiment with other regions and come back here to live satisfied with Oregon and her glorious climate.

Here is a question that is pertinent just now: in all of Oregon is one newspaper openly and avowedly for Joseph Simon for United States senator? If there be that newspaper is keeping very quiet and is not letting the public know anything about it.

## DISCUSSION OF GRAIN SMUT.

A subject of interest to farmers, and one generally not understood by the average persons, is that of smut. When I say this matter is not generally understood, I do not mean to say that the average farmer does not understand the proper method of destroying smut spores in so far as science has pointed out the way up to date, but as to the manner and cause of growth of this parasite; for that it is a parasite and cannot germinate or live except upon the life of some other plant has been proven beyond doubt. A good many farmers whom I have heard express this opinion are of the theory that smut, like rust, is altogether produced on the grain plant by weather conditions after it has formed the head. And under the head "Treatment of Smut in Seed Wheat," R. Winterberger, of the University of Illinois, has this to say:

"Smuts in all farm crops are caused by parasetic plants. The life cycles of these smuts consists of two stages, the mycelial or growing, and the reproductive spore stages. The plant grows always by means of slender, elongated cells, which increase in length, dividing and keeping pace with the growth of the host plant. In the first stage of growth the smut does not visibly show itself in the way of swollen or discolored tissue."

That the condition of the weather at the time of seeding has much to do with the quantity of smut there can be no doubt; but that it begins life after the host plant has come through the ground is an error, as is proved from the following extract on this subject in Farmers' Bulletin No. 10, Department of Agriculture:

"It has long been known that where the spores of fungus are present on seed when sown, the fungus is able to infect many plants. The spores of many smuts germinate simultaneously with the seed, and finding entrance into the delicate tissues of the young plant, the fungus is safe from all external treatments, and its presence remains unsuspected until about the time of the maturity of the plant, when it reappears to infect the seed of the host."

Walter T. Swingle, of the division of vegetable physiology and pathology, United States Department of Agriculture says:

"To the ordinary observer nothing could seem more unlike a definitely organized plant than the black, dusty mass which fills the kernels of wheat or replaces the entire head of oats attacked by smut, and yet, as a matter of fact, this black dust consists of thousands of germs of minute parasitic plant, having the same function as the seeds of higher plants. These germs, or spores, are blown about by the wind and are frequently carried from field to field by threshing machines. Many of the spores lodge on healthy kernels, and when the latter sprout the spores adhering to them germinate and send slender threads into the young plant. Their presence, however, can scarcely be detected until the head begins to develop. At this time the threads fill the flower or kernel, absorb the nourishment intended for the grain, and are soon converted into a mass of spores, and from this mass are blown about and infect the next years' seed. Two classes of smuts attack our common cereals, viz, the stinking smuts, or bunt, which occur on wheat only, and the loose smuts, which attack wheat, oats and barley."

M. A. Carleton, grain expert of the division of vegetable physiology and pathology, perhaps the best posted man on wheat and its diseases in the world, who was in the county a couple of years ago, in discussing this subject with the writer, declared the facts as given above.

The treatment of seed for prevention of smuts by a score or more of experts varies from a few minutes to thirty-six hours of immersion in copper sulphate (blue vitriol or blue stone) solution, varying in strength from four to ten bushels to the pound. The majority agree that the grain seeds were more or less injured according to the strength of the solution and duration of the immersion, and the best results are claimed to have followed when seed was planted as soon as dry enough after treatment, both as to germination of grain and destruction of smut spores. Nearly a score years ago when I began wheat growing in this county, knowing nothing of conditions here, I was told that putting a bushel or a bushel and a half wheat in a grain sack and dipping it into a barrel or tub nearly full of vitriol water and leaving it a few seconds, long enough nearly for all the grain to get wet with the solution, was as good a way as any.

A method which is the one almost entirely employed here, I have kept up ever since. The vitriol I always put in the barrel-tub and allow to dissolve as the grain is treated, putting in more vitriol and water as needed. With the exception of one year, I have had no smut or only a trace of it. For fifteen years I used seed from my own crops each succeeding year. The one year when I had smut the seed was got from a neighbor's field and had some smut on it, and it was necessarially sown during a long drawn out wet spell. The first few days the weather was warm and the soil being in fine condition the grain came up quickly and there was but little smut on that part of the field; but, as the work progressed the weather got wetter and colder and the harvest showed an increase of smut gradually as the work had progressed from side to side of the field, which was begun on one side and the drill run back and forth across it. Up to the time when my grain had smut, I had been of the opinion that my method of treatment and seeding was the principal cause why I had no smut, but since then I am somewhat skeptical on that point. There seems to be a number of causes of smut hard to discover. That locality has a great deal to do with it there can be no doubt, at least as to variety. I have seen wheat grown from western Pennsylvania to eastern Missouri, but never heard of treatment for smut till coming to this county. To be sure, there was some loose smut on corn and oats, and this is the variety mentioned as being blown about by the wind and lodging on unaffected grain. The stinking smut, or bunt is the variety we have to deal with here. Occasionally a field of barley may be seen slightly affected with the loose variety which affects the whole head.

I was told by a native of Tennessee that not only was it necessary to treat wheat in that state, but oats also, and a former New Zealander also said that the same was true of that country.

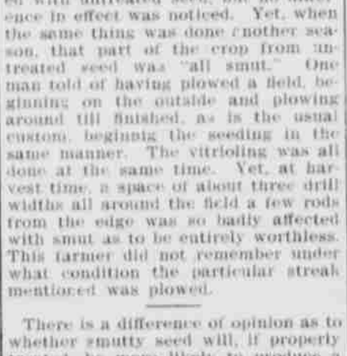
In talking over the matter with farmers in this county, there have been some curious things stated about the freaks of this fungus. For instance, a half dozen have stated that in certain seasons their field which had been put in under exactly the same conditions, would be almost entirely free from smut, except perhaps fifteen or twenty acres which would be badly affected. Others claim to have begun seeding before the fall rains and finished after the rains, the first sowing being smutty and the last not, while others claim to have had the reverse experience.

At least three have told of running out of seed grain just before finishing a field, and not wishing to bother with treating a small amount, have finished with untreated seed, but no difference in effect was noticed. Yet, when the same thing was done another season, that part of the crop from untreated seed was "all smut." One man told of having plowed a field, beginning on the outside and plowing around till finished, as is the usual custom, beginning the seeding in the same manner. The vitrioling was all done at the same time. Yet, at harvest time, a space of about three drill widths all around the field a few rods from the edge was so badly affected with smut as to be entirely worthless. This farmer did not remember under what condition the particular streak mentioned was plowed.

There is a difference of opinion as to whether smutty seed will, if properly treated, be more likely to produce a smutty crop, some claiming it will, while others claim it will not. Some farmers are said to save their worst affected grain, because of being worth less in the market, for seed. Again, it is said there are those in this county who have used affected seed from year to year, till their crops were so badly affected as to make them almost unsalable, but after changing seed grain, they were no more troubled with smut. What causes these contrary results is a question no one in these parts seems able to answer. To quote from one of the extracts given at the beginning of this letter, slightly changed, "the record of smuts constitutes a facinating page in the history of vegetable pathology."

A. RUPPE.

Pleasant View, Nov. 5.



FOR GOLF RASH

Heat Rash, inflammations, itching, irritations and chafings, undue or offensive perspiration, and many other sanative uses, nothing so cooling, purifying, and refreshing as a bath with CUTICURA SOAP, followed in the severer forms by gentle anointings with CUTICURA, the great skin cure and purest of emollients.

CUTICURA SOAP is beyond all doubt the most effective skin purifying and beautifying soap, as well as the purest and sweetest for toilet, bath, and nursery. Sold throughout the world. POTTER DRUG AND CHEM. CORP., Sole Props., Boston. "How to Have Beautiful Skin," free.

Lonely Homes

A home is never complete without children. Yet many homes are childless. Many wives are desolate for the lack of a child to love. Their lives are aimless—void of the high motives of motherhood. While barrenness is causing incalculable sadness and sorrow, it exists in most cases on account of some little female trouble, which Wine of Cardui would speedily set right. This pure Wine regulates the disordered female organs by building up the worn out nerves and regulating the menstrual flow. It restores the fallen womb to its proper place. By strengthening the generative organs, it makes pregnancy possible where barrenness exists. You can depend on

WINE OF CARDUI

Suffering women all over the land have been depending on it for seventy-five years. No more convincing proof can be given than the testimony of Mrs. Benson, who is only one of thousands of women to whom Wine of Cardui has brought a permanent cure. Many cases of miscarriage—that trouble which robs mothers of their hopes—have been avoided by timely use of the Wine. You are asked to try Wine of Cardui and Thedford's Black-Draught, its companion medicine. Nine out of ten cases of female trouble, barrenness included, yield to them. All druggists sell $1.00 bottles of Wine of Cardui.

Vandervoort, Ark., April 2, 1900.

Last May I had a miscarriage, which was followed by flooding. I read your Almanac and my husband got me a bottle of Wine of Cardui and it stopped my flooding and restored my fallen womb to its place. Now I am cured after taking three bottles and have another to take which I got this morning. I am expecting to become a mother and Wine of Cardui will be my doctor.

Mrs. MARY L. BENSON.
