conducted a department of study of current events, and it has brought e. the work, and the methods employed are recommended to the careful insonal experience along that line.

\$24,000 FOR ONE SECTION.

A. K. Finley has sold 640 acres of land near Helix for \$24,000. This is a years ago that lands thereabouts were best results are but community of prosperous people who and "sol" a petrified fish produce annually a goodly portion of the country's contribution to the foods of the world. Beyond Henz, during designers of car wheels for railroads the recent depression, that region was The flanges-doubtless without spec deserted by farmers who loaded into ial consideration-were placed on the effects and left the country. They simply abandoned it and never re- ly round sharp curves where those turned to take possession of the lands with inside flanges will fam or leave they had owned, and which they had the track. placed under heavy mortgage to the loaning companies. These companies M. Trouve consit of streams of glass

take the lands, and later found that small objects, kept in motion by air they were good for all the uses to which agricultural lands are usually

It is a pleasing transformation if a region that it was feared by some persons living here would never be worth the taxes that must be paid even upon a low valuation

HANNA AND GATHMAN.

Senator Hanna, of Ohio, seems doomed to suffer through the failure of his pet schemes. Last winter it was the snip subsidy bill that came crashing about his ears. Now it is the Gathmann gun. Last Saturday at Sandy Hook the expensive piece of ordnance proved itself to be just about as effective as a child's toy pi tol would be when fired at the steel target that it was expected to blow to atoms. For several years Hanna been poshing the Gathmann scheme. At first he wanted an appropriation of many hundreds of thousands of dollars from congress for the purpose of buying half a dozen or more of the immense gun cotton throwers. The destructiveness of the gun was exploited in half the papers of the country. Hanna held select atdiences of congressmen in awe-struck attention while he told them of the those terrific charges llt. An enemy's fleet, no matter how powerful, would be simply blown out of the water by a single charge, he assured them, an I, raltar, Morro Castle, Sebastopol a : rolled into one would crumble inco tor managed to get an appropriation for a trial of it's friend's big shoote: and, after many months, the gun was

The newspaper men of the country were told of the trial that was to be given and all within reach of the telgraph wires were expected to be thrilllaxy of scientific and professional men journeyed to Sandy Hook to be shoelscarcely dented by the contact. A lif-Mr. Gathmann asked permission to try it again, and another couple of the only result. Then the ordnance officers tried one of their own 12 inch projectiles just by way of "rubbing it chilled steel and went on through the target's body and back. loss. Had it not been for Mr. Hanna's persistence in urging the appropriation, the money would not have

In drowning, strangulation, gas suffocation and the like, the body is in a healthy condition, death resulting from stoppage of respiration and heart action. The actual restoration of life by renewing breathing and the circulation of the blood is now known to be possible. This has been demonstrated in Europe by a series of 160 experiments on dogs, in which sixteen out of twenty-one animals that had been killed by chloroform were brought back to life. The process consists in forcing air through a tube into the lungs at he usual breathing rate, and in opening the chest and squeezing the heart in imitation of the natural contractions. A Danish physician has reported a trial in the case of a man that had died under chloroform. The heart was reached through an opening cut in the chest wall, and was squeezed rhythmically for half an hour, air being at the same time forced into the lungs and as a result respiration was set up and only an occasional compression was needed to keep the heart going. Life con tinued several hours, when breathing suddenly ceased and the patient was

In the new apjeulture, the length of the bees' tongue is of importance. The longer the tongue the greater is the honey-gathering capacity, and a new French apparatus, the glossometer, is designed to aid the aparist who, by indicious selection seeks to develop a long-tongued race. The apparatus simply a glass vessel for syrup. with a lid having numerous perforations, and a floating scale to show the sheld of the liquid when the bees just reach it through the holes. It is estimated that the ordinary bee can draw aweets from a depth of a quarter of an inch, and that selection can increase the range a twenty-fifth or an

of Paris, are prepared by mixing 200 counts of chloride of lime with 7s jaundry to pounds of sodium dioxide and form ing the resulting vellowish-white pow der into cakes under strong compres sion. The cakes are hard and shiny as crockery, and on being placed in water give off a regular and even supof oxygen gas.

An excellent building material, resembling pressed brick but harded, is being made in European gas works from coke ashes, hitherto a trouble some waste. The ashes are powder mixed with a tenth part of slacklime, formed, into a stiff paste with water, and pressed into bricks like clay. The bricks protected from rain, harden in the air without artificial heat.

A new Russian apparatus for restor ing hearing consists of a light rubber cell, furnished with a miniature microphone, which is connected to a small galvanic battery. It is claimauditory nerve of the deaf w
