"Green Goods" Fossils. One of the most remarkable books ever published is the "Lithographia

Wirceburgensis," written by a Wurzburg naturalist named Behringer in 1726. Probably very few copies are in existence, as the author destroyed all that he could get possession of soon after the book appeared.

He had been victimized by some practical jokers, who had made a great variety of artificial "fossils" and hidden them in a quarry, to which they then enticed the professor. Behringer was overjoyed by so rich a find and had no suspicion of the trick, although many of the fossils were of a very grotesque character.

He took his treasures home, made elaborate drawings of them and wrote a minute description of each, as well as an exhaustive commentary filled with ingenious and plausible theories. When he had published the book, the

jokers confessed, and then, of course, the professor did his utmost to suppress the work.
