ton, Oregon.

A NEW INDUSTRY

THE MANUFACTURE OF ARSENIC AT SEATTLE

The First Product of the Kind Turned
out in United States; the Pro-
duction of Aluminum, Bauxite,
Titanium; Value of Oxides.

Among the new industries that
have recently developed in the United
States is the manufacture of ar-
senious oxide, says Dr. Joseph
Struthers in Mineral Resources of
the United States, 1901, now in
press, United States Geological Sur-
vey, David T. Day, Chief of Division.
This manufacture was taken up dur-
ing 1901 by the Puget Sound Reduc-
tion Company, at Seattle, Washing-
ton, and an output of 300 short tons
was placed on the market. Previous
to 1901 the world's supply of arsenic
and arsenious compounds was de-
rived chiefly from the mines of Corn-
wall and Devon, England, and at
Friedberg, Germany. In 1899, the
world's production of the forms of
arsenic amounted to 14,936,165
pounds, valued at \$581,911. The im-
ports of arsenic into the United
States during the last five years
have averaged about \$340,000 per an-
num, which seems to show that the
exploitation and manufacture of ar-
senic and its compounds in this
country could be profitably devel-
oped.

Aluminum.

The production of aluminum in the
United States during 1901 amounted
to 7,150,000 pounds. The Pittsburg
Reduction Company, operating the
Hall patents, remains still the sole
producer of aluminum in this coun-
try. The price of aluminum per
pound remained practically station-
ary throughout the year, although
the demand for the metal increased.
The total imports of all forms of
aluminum in 1901 were valued at
\$109,748, as compared with \$50,444
in 1900.

Bauxite.

Georgia produced the bulk of the
domestic bauxite in 1901, the re-
mainder being supplied from Alabama
and Arkansas. The total production
was 18,905 long tons, valued at \$79,
\$14, as compared with 23,184 tons,
valued at \$89,676 in 1900. Bauxite
is used mainly in the manufacture
of aluminum, although a considerable
quantity is used for the manufacture
of aluminum sulphate and crystallized
alum. The Pittsburg Reduction
Company is installing a large plant
at Bauxite, Saline County, Arkansas,
which promises to increase largely
the output from Arkansas in 1903.
The import of bauxite into the United
States during 1901 amounted to
\$67,117; the exports were valued at
\$300,000; and the consumption
seems to have been 39,658 long tons,
valued at \$151,262. The imports in
1901 were 18,213 long tons as com-
pared with 8,656 tons for the preced-
ing year, an increase due mainly to
the low ocean freight rates from for-
eign ports. This low freight rate
caused bauxite to be delivered, duty
included, from the south of France
at New York, Philadelphia, and Balti-
more, at a lower rate per ton than it
cost to ship it from Georgia or Ala-
bama to Philadelphia. The princi-
pal commercial salts of aluminum
are aluminum sulphate and crystal-
lized alum, for the manufacture of
which bauxite and Greenland cryo-
lite are used. The Pennsylvania
Salt Company possesses the exclu-
sive privilege of importing cryolite
into North and South America. In
1901 the production of aluminum sul-
phate was 74,721 short tons, and

SSS SKIN DISEASES

The skin is provided with millions of little pores
and glands invisible to the natural eye, yet through
these tiny outlets the larger part of the deadly matter
that daily collects in the body is carried off. But nature
never intended that poisons of an irritating or acid
character should be eliminated through the skin, the Liver and Kidneys being their natural
outlets, and it is when these important organs fail to perform their functions that these acid
poisons are absorbed into the blood and find their way to the surface of the body through the
pores and glands of the skin, producing intense itching and burning, inflammation and
swelling, and eruptions of every conceivable size, shape and character.

Skin Diseases differ greatly in their general characteristics and degrees of intensity.
Red and angry looking spots break out upon some part of the body with a mass of small
pustules or blisters, from which is discharged a clear or straw colored fluid, which dries and
flakes off in bran-like particles and scales, or forms into hard and painful sores and scabs.
The skin often hardens and dries, cracks and bleeds from the effects of the fiery acids,
which the blood is continually
throwing off. Pimples, black-
heads and blotches are evidences
of a too acid blood, which has
inflamed and clogged the pores.

Skin Diseases being depend-
ent upon the same causes require
the same treatment, which must
be constitutional and not external.
Nothing applied locally to the
inflamed surface can bring much
relief. The disfiguring eruptions
will continue to annoy and pain
you in spite of soaps, washes or powders.

There is no hope of getting rid of a skin disease
except through the purification of the depreciated blood and neutralizing and filtering out of
the circulation all poisonous substances and acids.

SALT RHEUM, ECZEMA, TETTER, NETTLE RASH, PSORIASIS, ACNE, BOILS.

Our Medical Department has been of the greatest assistance to thousands seeking relief
from blood and skin troubles. Write us fully about your case, and our physicians will help
you, for which no charge whatever is made. Our illustrated Book on Skin Diseases will be
sent free to all who write for it.

that of crystallized alum was 7,755
tons.

Titanium.

The occurrence and production of
titanium ores is discussed by Mr.
W. O. Snelling in Mineral Resources
of the United States, 1901, now in
press, United States Geological Sur-
vey, David T. Day, Chief of Division,
with special reference to the recent
discovery of large deposits of rutile
in Virginia, which has brought to the
attention of the ceramic and the
steel industries the commercial pos-
sibilities of this ore of titanium.
Hitherto, owing to the small supply
that has been available, and to the
impure state in which it is generally
found, rutile has been but little used
in this country, the few hundred
pounds produced annually going
largely to the collectors of minerals
and to the manufacturers of artificial
teeth, who use the pure oxide as a
pigment in reproducing in porcelain
the natural yellow color of the tooth,
notwithstanding the recognized value
of titanium as a component of a spe-
cial steel, and notwithstanding the
use of the oxide for many years past
by foreign manufacturers of pottery.
Minerals containing titanium are
found widely distributed and in such
large quantities as to make it a re-
latively abundant element, though
nearly all the text books on chemis-
try speak of titanium as one of the
rare metals. In some places, particu-
larly in the Adirondacks, titanifer-
ous iron ores are found in enormous
quantities, making one of the princi-
pal components of the great rock
masses which for mountains and
constitute a geological formation.

Ilmenite is the most abundant of
all the titanium minerals, and is
found in beds of great extent
at Kragero, in Norway, Ba ySt.
Paul, in Canada, and in Rhode Is-
land, Connecticut, New York, North
Carolina, Pennsylvania and Vermont,
in the United States. Rutile is gen-
erally found wherever large deposits
of ilmenite occur, and besides the
localities mentioned for ilmenite, it
is found in notable quantities at

Ottumwa, Iowa, April 10, 1901.
In 1883 I broke out with Eczema on my head, legs and arms. The
Doctors treated me for about two years without giving relief. I next
tried various ointments, soaps and washes, but these did me no good.
I finally quit taking medicine, as the physician said the disease had
become chronic and incurable. Having endured this tormenting malady
for about 16 years, I determined to make another effort to get rid of it
and began S. S. S. in July, 1900, and continued it until November, when
I discovered, to my surprise and joy, that not a spot could be found on
my body, which before had been almost covered with the eruption.
It has now been nearly a year since the disease disappeared, but not
a sign of it has ever returned, and I am satisfied the cure is permanent.
