CROPS AND LIVESTOCK.

Milton Evans, of Walla Walla, Makes Official Report to Statistical Agent at Spokane.

Milton Evans, reporter for the division of statistics, United States department of agriculture, last night forwarded his report on the condition of crops and livestock in Walla Walla county to H. W. Desgranges, state statistical agent at Spokane, says the Union. In regard to the wheat crop Mr. Evans says:  
"Growth backward; condition average; only 40 per cent seeded to wheat last fall because the ground was too dry; deficiency will be made up by spring seeding; fall seeding very weedy; no winter wheat killed; spring very favorable for seeding and growing."

After collecting information from reliable sources, Mr. Evans reports there are now twice as many hogs and breeding sows in the county as there were on April 1, 1902. The exact number is not indicated.

The condition of horses, cattle, sheep and swine was found to be normal.

As to the prevalence or absence of disease among domestic animals, Mr. Evans reports horses, sheep and swine to be in perfect health, among cattle the only trace of blackleg is reported.

THE BEST MANUFACTURING COMPANY STEAM AND HORSE POWER COMBINED HARVESTER

As McCormick was the original inventor of the reaper and harrow, so was "Best" the original inventor of the first successful combined harvester.

We wish to call the attention of our friends who contemplate purchasing a Side-Hill Combined Harvester the coming season, to the fact that we are still in the lead in the way of improvements in harrowing machinery, and which our farmer friends have rightfully named "KING OF THE FIELD." After watching its work in the field for the past sixteen years, and for the season of 1903 it will be still better as we have made a number of valuable improvements.

The MACHINE is the strongest and most durable made.

IMPROVED DRIVE WHEELS—5 feet 4 inches high, 22 inch diameter.

RUNAWAYS—are a rare thing with us. There is a brake on the main drive wheel, which is controlled by the driver.

HEADER—is driven independently from the grain wheel of the separator, and is arranged with a clutch for throwing in and out of gear when turning corners.

THE SEPARATOR—We wish to call your attention to the fact that the separating qualities of our machine. We claim that no other combined harvester on the market can in any way compare with it for speed and thoroughness of work, in all kinds and conditions of grain, and will require less team to operate it.

AUTOMATIC GOVERNOR—Our patent wind governor on the fans governs the blast so that at any speed at which the harvester may be traveling, the wind is automatically regulated and prevents clogging the shoe and carrying the grain over in the straw.

We take pleasure in inviting you to call on Temple & Wilcox, Pendleton, and make a personal inspection of each and every part of our machines before placing your orders. Every machine warranted to do all we claim for it and to be first-class in every respect.
