HAY CROP SECURED AND RANGE GETTING SHORT.

Wheat is of Excellent Quality Every-Where-Dairy Cows Diminishing in Supply of Milk-Small Fruits Are Yielding Finely, But Prunes Will Be

The weather during the past week was excellent for ripening spring grain and for harvest work. The hay crop has been secured in fine condition, and the yields are generally reported satisfactory. Pastures are turning brown and feed on the ranges is getting short. Stock in general continues in good condition, but in the dairy districts the supply of miss is diminishing, due to the shortage diminishing, due to the shortage in green feed and because the flies become unusually numerous and troublesome. In portions of the Wil-lamette valley grasshoppers are re-ported thick in the clover fields, al-though so far they have done but little damage.

The wheat harvest is being pushed in all sections of the state and re-ports from the harvest fields are unanus as to the excellent quality of the berry, but nearly everywhere yields are turning out smaller than last year. Oats are a fine crop, and barley yields are good.

Corn has made excellent progress during the week. Lice are unusually numerous in the hops, and the plant is from a week to 10 days backward, which conditions excite considerable oprehension as to the outcome of

Small fruit, such as raspberries, currants, blackberries and huckleberpast to days have shed to an alarm-be extent, and there is no question cut that the yields will fall greatly below the estimates made earlier in he season. Apples, aithough uneven, outings doing well, and the crop will the season probably be a rairly good one
