

Bright's Disease and Diabetes News.

San Francisco, Oct. 20, 1903.
To F. W. Schmidt's Pharmacy: Dear Sirs.—As agents for the Fulton Compounds in Pendleton, there are some facts in the Call office in this city that should interest you and the editors of Oregon, as well as newspaper men generally. We copy now from a letter from Clifford House of the Call:

"However improbable may seem the statement that Bright's Disease and Diabetes are now curable in a great majority of all cases, it is well within the province of some of us in the business department of the Call to know that it is true. Mr. Edward Short of this department was given up by his physicians as a victim of Diabetes, and is now perfectly well. The mother of one of the editorial staff has also recovered from Diabetes. This was so conclusive that I told a friend, a well-to-do citizen of Duluth, Minn., who had Bright's Disease, and he too recovered.

We will also add that an ex-supreme judge, with offices in the Call building, is a late recovery. You are authorized to proclaim to the world that the most deadly diseases known, viz.: Bright's Disease and Diabetes, yield to the new diuretics evolved during experiments made upon himself by John J. Fulton of this city in his memorable struggle against the ravages of Bright's Disease.

Yours very truly,
THE JOHN J. FULTON CO.

Nasal CATARRH

In all the states there should be cleanliness.
Ely's Cream Balm cleanses, soothes and breaks the diseased membrane. It cures catarrh and drives away a cold in the head quickly.

Cream Balm is placed into the nostrils, spreads over the membrane and is absorbed. Relief is immediate and a cure follows. It is not drying—does not produce sneezing. Large Size, 50 cents at Drug stores or by mail; Trial Size, 10 cents by mail.
ELY BROTHERS, 36 Warren Street, New York.

THE SURE WAY

to Prevent Pneumonia and Consumption is to cure your cold when it first appears. Acker's English Remedy will stop the cough in a night, and drive the cold out of your system. Always a quick and sure cure for Asthma, Bronchitis, and all throat and lung troubles. If it does not satisfy you the druggist will refund your money. Write to us for free sample. W. H. Hooker & Co., Buffalo, N. Y. F. W. Schmidt & Co., druggists.

WORLD'S WHEAT

UNITED STATES LEADS ALL NATIONS OF THE EARTH.

If All Races Used as Much Wheat as English People, the World's Crop Would Have to Be Trebled to Supply the Demand—Per Capita Consumed in England Seven Bushels.

According to the figures given out by the United States secretary of agriculture in the Crop Reporter for October, 1903, the wheat crop grown in the principal wheat growing countries of the world, in 1903 reached the grand total of 3,622,630,000 bushels, being 153,790,000 more bushels than the crop of 1902.

The United States produces more wheat than any other one nation, our wheat crop of 1903 reaching 639,340,000 bushels, followed by Russia with 523,600,000 bushels. France comes third with 338,040,000 and India fourth with 285,650,000.

Though France produced more wheat in 1903 than the United States did in 1875, the amounts being 338,040,000 bushels grown in France in 1903, and in the United States 309,102,700 bushels in 1875. France does not produce all the wheat she consumes and is a wheat importer.

An English writer of repute in an article in Library of Universal Knowledge on wheat says: "The value of wheat depends mainly on the quantity of fine flour which it yields; the best wheat yielding 76-80 per cent, sometimes even 86 per cent of fine flour, whereas inferior kinds seldom yield more than 68 per cent, and sometimes only 54-56 per cent." The historian Eden, in his History of the Poor, published in 1797, in describing the every-day life of the people in Cumberland county, England, records: "So small was the quantity of wheat used in that county that it was only a rich family that used a peck of wheat in the course of a year, and that was used at Christmas."

In 1839 England grew but 14,000,000 bushels of wheat or about three bushels per capita of the population. England now consumes seven bushels per capita.

If the 1,500,000,000 of people on earth lived as well as the English, it would require 10,500,000,000 bushels of wheat to feed them, or more than three times the whole crop of 1903.

SUBSTITUTE FOR AIR.

Invention That Should Prove Valuable to Divers and Miners.

An apparatus which is intended to occupy the place of the atmosphere so far as concerns the necessary breathing to sustain life has been invented by M. G. F. Joubert, late professor of chemistry at the Paris Ecole Polytechnique, says The Scientific American. The apparatus is specially intended for the use of divers or for those whose occupation requires them to enter places where there are noxious gases.

The invention consists principally in the manufacture of a substance which the professor calls "oxythine." This chemical, which emits oxygen, has the general appearance of a stone and resembles the well known calcium carbide. By means of this discovery, in addition to a process of absorption of carbonic acid gas, M. Joubert claims to be able to produce a complete "breathing cycle" which sustains life without the aid of the atmosphere and without any inconvenience to the subject of the experiment.

The person whom Professor Joubert submitted to several tests had an apparatus fixed over his mouth and nose. He inhaled the artificial air by a tube connected to one end and breathed out the vitiated air into a second tube connected with the other end of the apparatus.

PRESERVATION OF DEAD.

Embalming Process Which Seems to Solve the Problem.

An interesting demonstration was recently given at the examination hall of the Royal College of Surgeons in London of a wonderful machine invented by a Belgian doctor for preserving the dead against the natural law of decay. His apparatus effects a subtle chemical change in the tissues of the dead body which makes it impervious to decomposition. What the change is even scientists cannot exactly say. They know enough, however, to assert that it delayed almost indefinitely the dissolution into dust and ashes. This is the latest as it will be the most useful development in the ancient art of embalming, says a writer in the London Telegraph.

Its method is more wonderful than any yet discovered, because no impious hand need touch the dead. In the more material sense nothing is done to the body by handiwork; it is simply subjected to air heavily charged with the pungent chemical known as formalin. This air penetrates the whole body and in the course of time makes the tissues insoluble and the stomach and other organs sterile. Thus decay is arrested without visceration.

Confessions of a Priest.

Rev. Jno S. Cox, of Wake, Ark., writes, "For 12 years I suffered from Yellow Jaundice. I consulted a number of physicians and tried all sorts of medicines, but got no relief. Then I began the use of Electric Bitters and feel that I am now cured of a disease that held me in its grasp for 12 years." If you want a reliable medicine for Liver and Kidney trouble, stomach disorder or general debility, get Electric Bitters. It is guaranteed by Tallman & Co. Only \$0.25.

HER LIMITED AMBITION.

Tom: "I suppose you wouldn't think of marrying a man unless he could afford to give you a yacht?"
Helen: "Oh, I don't know. If I really loved him, I would be satisfied with a little smack occasionally."

MONUMENT TO SUMNER.

Over \$120 Has Been Subscribed to the Fund in Oregon.

Governor Chamberlain yesterday received a report from Walter L. B. Plummer, of Portland, state agent of the Sumner Monument Association, showing the amount of subscriptions to the monument fund to date. The report shows that a total of \$104.50 of the subscriptions had been paid, and that \$120.25 had been subscribed, but not paid, making a total of \$224.75.

The monument referred to is one that is to be erected to the memory of the late United States Senator Charles Sumner, and the subscription for the same is national in scope.

IDAHO PRESS ASSOCIATION.

Officers Elected and Boise Chosen for Next Meeting Place.

The Idaho Press Association closed its third annual meeting at Coeur

d'Alene City yesterday, after a pleasant and instructive session.

Boise City was selected as the meeting place for the fourth annual convention and about 25 new members were added.

The election of officers resulted in the choice of Colonel H. C. Shaver, of the Moscow Star, for president; E. C. Simmons, of the Boise Unionist, vice-president, and H. S. Parker for secretary. The only lady member present, Miss Mabel Paine, was elected treasurer by acclamation.

The association passed the usual ringing resolutions, thanking everybody in sight of the railroad track over which the members traveled, from Boise to Coeur d'Alene City.

Big Coast Bank Fails.

The banks of the International Bank & Trust Company at San Francisco and Seattle have failed owing to the suspension of the head of the institution at the City of Mexico.

GIGANTIC SCHEME

GOVERNMENT WOULD DIVERT WATERS OF PEND D'OREILLE.

Indication Scheme of Immense Magnitude Now Interesting Engineers in Northern Idaho—Would Open a Country Equal to Big Bend.

Spokane, Oct. 22.—Plans for a huge irrigation scheme whereby the government can reclaim thousands of acres of arid land in Northern Idaho and Eastern Washington through the utilization of the waters of Pend d'Oreille lake are being prepared by T. A. Noble, an engineer attached to the department of the government geological survey, division of hydraulics, who has established his headquarters in the Peyton building, this city.

Engineer Noble and assistants have been quietly working on the scheme all summer. Their reports have been made to the geological survey department in Washington, and in turn the latter department will prepare the official data to be made public.

Spokane capitalists who have been studying the irrigation project have been awaiting developments with much interest. If the program is carried out, it will mean that the land to be irrigated will be equal in fertility to any soil on the globe and will bring thousands of settlers to this part of the Northwest.

Pend d'Oreille lake is one of the finest bodies of fresh water in the Northwestern part of the United States and will doubtless furnish an abundance of moisture for the great irrigation project if the engineer detailed to look into the matter reports favorably.

His investigations are well under way and he believes the scheme to be practical.

Most of the country figuring in the irrigation plan is government land or timber claims. It is to the northeast of Spokane county, the lake itself being only a short distance from the northeastern corner of the county. If the plan goes through it would open up a farming country equal to or bigger than the Big Bend or Palouse countries.

Another Good Indian.

In a fight over a squaw, John Coldwater, a Blackfoot Indian, was killed Tuesday morning by Spotted Dog, near Cut Bank, Mont. The Blackfoot tribe threatens to go on a raid if the whiskey peddlers are not kept off the reserve. This causes all the trouble.

Take Advantage of this Opportunity

WILL BE HERE SATURDAY

MR. J. C. PRICKETT, a practical cutter and designer from the J. M. Achison Tailoring Company, of Portland, Oregon, will display a beautiful assortment of woollens at our store. The line embraces exclusive patterns for Ladies' Suits, Skirts and Cloaks; Mens' Suits, Overcoats and Trousers. These garments are made up with style and perfect workmanship, and are sewed with silk thread throughout and the best lining is used. The J. M. Achison Tailoring Company is the largest tailoring establishment in Portland and is where the swell dressers go. Every order taken by this company is made up for the individual measurement of the customer and not from stock suits altered to conform with the measurements. As a proof of this, customers have the privilege of having the garment ordered sent them to be tried on before completed.

WE have on display a full line of samples of the New Fall and Winter Woollens and ladies and gentlemen can come in and examine the goods, study the styles and if they decide to order, can have their measurements taken by Mr. Prickett

SATURDAY, OCTOBER 24th., 1903.
