# AMONG THE EXCHANGES OF THE INLAND EMPIRE

## Wonderful Forage Plant,

The farmers of eastern Yakima valley have discovered a valuable forage plant which promises greater returns than any cultivated crop-tested. It is teosinte. Experiments conducted by different parties show that the plant will produce at least 50 time of group for the start 60 tons of green food per acre. It grows to the height of 10 or 12 feet and has two crops annually. The plant is well adapted to Western Washington, and will prove a money maker to dairymen and stock feed-ers. Under the irrigating farming it is a wonder in the production of feed.

feed Teosinte belongs to the corn famrich river bottoms of South Ameri-ca. The stems contain about 10 per cent sugar and are relished by all kinds of stock. Seed cannot be grown in the northern states. In the south the crop is one of the most profitable that can be planted. The Louisiana experiment station has produced fifty tons of green feed per acre. This is readily purchased by dairymen for \$2 per ton, in the field, while h a crop requiring no more lab-or than corn yields \$100 per acre in term, he

or than corn yields \$100 per acre in the field it is worth growing -- North Yakima Cor. in P. I.

## County May Lose.

Unless the next legislature can be prevailed upon to pass an act for re-lifer, the county of Walla Walla stands a good show to lose over \$700 that it has paid for the conviction of criminals in this county from

1898 to 1902. In checking up the books in the clerk's office the experts claimed that there were 20 cases of convic-tions in the superior court, in which the courty had cald the cost and HORSES BOARDED BY THE WEEK OR month at the ned Barn, 7.3 Concenwood street Rates reasonable. Will Raise Hogs and Corn. Several of our farmers will experi ment with a corn crop this season in the vicinity of Athena there were a number of fine fields last year, and it is believed that the soil in this vicinity will do equally well. If each farmer would plant a small patch and cultivate it thoroughly we believe the knowledge to be gained through such an experiment would well repay the expense and trouble, even if a large yield is not obtained.

Potato Crop Short.

According to the government's re-port, the production of potatoes in the United States in 1903 reached 247.127.880 bushels as against 284. 632.787 bushels in 1902, a decrease of 37.504.807 bushels, or about 12 per cent. In values the crop of 1903 was \$151,658,094 as against \$134,111,436 in 1902, an increase of \$17,526,658. The acreage in potatoes last year was 2,916,855, making the average pro-duction per acre 84% bushels, at an average value of 63 cents per bushel. As an illustration of the difference of values with 37,504,907 bushels more spuds in 1902, the crop was valued at \$17,526,658 less money.
