### SHEEP GROWING STATES.

Montana Leads With Over 5,000,000

#### Head in 1904.

Montana remains at the head of the wool-producing states of the Union. The report of the acting statistician of the department of agricul ture shows that this state has more sheep than any other state in Union

The report indicates that Montana has 5,270,063 sheep, having an aver-age value of \$2.31 a head when the estimate was made.

Wyoming is second with 4,602,655 head, with an average value of \$2.58 a head. New Mexico is third with 3,860,466, with an average value of \$1.93 a head. Idaho is fourth on the

list with 3.588,034, \$2.21 a head. Next in order are Ohio, Oregon, California and Michigan, each above the 2,000,000 mark. Colorado. Texas, Wisconsin, New York and Arizona each have more than 1,000,000. The most interesting thing about the sheep census is the fact that the 51,630,144 head in the country shows

a decrease of 12,334.732 head. That is a shrinkage in numbers that is highly important to flock rais ers all over the land. The total num-ber of sheep reported in the United States last year was 63,964,876.

Amendments providing for complete government ownership were defeated and the bill will shortly be approved also by the senate and the governor general

The bill provides for the building a road from Moncton, by way of North Bay or Gravenhurst and Winnipeg, to either Butte inlet or Port Simpson, a distance of 3125 miles. The project is estimated to cost about \$125,000,000, and is promoted by the Grand Trunk railroad.

The Canadian government will construct the portion of the road from Winnipeg north and lease it to the Grand Trunk Pacific for a term of 45 years at three per cent upon the investment. After this it is understood that the company will reimburse the government. For the construction of the re-

mainder of the road the government will guarantee the payment of the con-struction bonds to be issued by the Grand Trunk Pacific.

It has been estimated that the railroad will help to open to cultivation 500,000,000 acres of fertile land in the Canadian Northwest, capable of pro-ducing five times the grain crop of the United States.
