CONGRESS IS CALLED

THIRTEENTH SESSION OF IRRIGATION ASSOCIATION.

Meeting of Irrigators to Be Held in Portland Beginning August 1 and Lasting Four Days—List of Delegates Will Include Prominent People From All Over the World—Will Be Greatest Irrigation Meeting Ever Held in the World.

Vice-President Thomas G. Hailey, of the National Irrigation Association, has received the official call for the next national congress, which will meet in Portland on August 21, and continue for four days.

This promises to be one of the greatest irrigation meetings ever held in the world on account of the activity of the government in reclaiming the arid lands of the west. This fact in conjunction with the Lewis and Clark fair, at which irrigation exhibits are a leading feature in the agricultural display, make the coming congress of extreme importance and a large attendance of Oregon people is expected, as well as irrigation enthusiasts and experts from every state in the Union, and from all the countries in the world in which irrigation forms any part of the industrial features. The call for the thirteenth congress is as follows:

The thirteenth National Irrigation congress is hereby called to meet in Portland, Ore., August 21 to 24, inclusive, 1905, convening in the auditorium, Lewis and Clark exposition grounds.

All who are interested in developing the great natural resources of the country, extending the habitable area and increasing the products of the land, insuring greater stability and more prosperous conditions, making occupations upon the land more attractive, the extension of the internal trade and commerce, and the dissemination of a wider knowledge of the great economic movement which has for its ultimate object the upbuilding of an empire within the borders of a great nation, are invited to attend the congress.

The organization of the congress is as follows:

The permanent officers of the congress, including the chairman of the sections.

Members of the United States senate and house of representatives.

Governors of states and territories.

Embassadors, ministers and other representatives of foreign nations and colonies.

Members of state and territorial irrigation commissions, and state commissioners of agriculture and horticulture.

Fifteen delegates to be appointed by the governor of each state and territory.

Ten delegates to be appointed by the mayor of each city of more than 25,000 population.

Five delegates to be appointed by the mayor of each city of less than 25,000 population.

Five delegates to be appointed by the chairman of the governing board of each county.

Two delegates, each duly accredited by the chamber of commerce, board of trade, commercial club or other commercial body.

Two delegates, each duly accredited by any regularly organized irrigation, agricultural or horticultural society.

Two delegates, each duly accredited by any regularly organized society of engineers.

Two delegates, each duly accredited by any agricultural college or college or university having a chair of hydraulic engineering, forestry or other subject related to the general purpose of the congress.

It is respectfully suggested that in the appointment of delegates, persons should be selected who are sincerely interested in and purpose attending the congress, and that appointments be made as early as possible.

The work of the congress has been so greatly enlarged through the increased interest in matters pertaining to irrigation, that the executive committee have decided to systematize the work of the next congress according to articles 3 and 5 of our constitution; consequently the work of the 13th congress has been divided into five sections.

Each section will be conducted by a chairman, who will be recognized as an eminent authority in his line, which insures a thorough exposition of the respective subjects through the presentation of papers, addresses and discussions by the most eminent men interested in forestry, irrigation, climatology and their correlated subjects.

In the various sections, information will be dispensed regarding the increasing production by irrigation in the humid as well as in the arid sections; forestry problems in New England, and along the Appalachian chain, as well as along the Rocky and Sierra mountains; engineering applied to protect from the devastation by floods; drainage of the submerged areas; directing and conducting the water to its most beneficial use; climatology with special reference to the service of the weather bureau throughout the United States, and colonization of new areas developed through irrigation.

It is confidently predicted that the coming session of the National Irrigation congress will be more highly instructive and entertaining than any congress which has preceded it.

Every state in the Union is vitally and directly interested in the subjects to be discussed.

The vice-president and member of the executive committee for each state are urged to make the provisions of the call as widely known as possible, and insure the largest possible delegation from their respective states.

Approved: George C. Pardee, president and ex-officio member executive committee.—By C. B. Boothe, chairman; A. H. Devers, vice-chairman; Tom Richardson, secretary.

The Mosaic Flooring of the Desert.

The northern portion of the Colorado desert is paved with the most wonderful pebbles in the world, in many parts so exquisitely laid as to defy successful imitation by the most skilled worker in mosaic flooring. These pebbles are made of porphyry, agates, carnelian, quartz, crystals, garnets, chrysolite and other such beautiful materials. They are packed together so that the surface composed of them is like a floor, and they look as if pressed into it with a roller. As a rule, they are of nearly uniform size, and each one is polished brilliantly, as if oiled and rubbed. Most of them are perfect spheres, and the reflection from them of the sun's rays is gorgeous beyond description. Each convex surface gives back a ray of light, and the ground for miles seems as if literally paved with gems. Thus the whole surface of the plain is a combination of myriads of reflectors, each pebble being so highly polished that it is like a mirror, and it is believed that the lakes of the desert mirage are produced by this means. The pebbles are polished by the loose sand which is blown hither and thither.

Wonderful Erosion.

A curious effect of the wear and tear to which the earth's crust is ever being subjected is exhibited in the singularly capped pinnacles existing on South river, in the Wasatch mountains, in Utah. There are hundreds of these slender pillars, ranging in height from 40 to 400 feet, most of them crowned by large caps of stones. They are not works of human art, as might be imagined, but are the memorial monuments of the hill from which they have been cut by the action of air and water. These pinnacles alone remain of many square miles of solid rocks, which have been washed away to a depth of some 400 feet. The greater hardness of the surface has caused it to resist corrosion more than the underlying rock, thus leaving huge caps of stone perched high in air on the points of their columns. One double column, capped by a single stone, forms a natural bridge both unique and picturesque.

The First Friction Matches.

The first really practicable friction matches were made by an English apothecary named Walker in 1827. He coated splints of cardboard with sulphur and tipped them with a mixture of sulphate of antimony, chloride of potash and gum. Each box, holding eighty-four matches and sold for a shilling, contained also a folded piece of glass paper, which was to be pressed together while the match was drawn through it. Three years later another ingenious person named Jones in London patented the idea of making a small roll of paper, soaked with chloride of potash and sugar at one end, with a thin glass globe filled with strong sulphuric acid attached at the same point. When the sulphuric acid was liberated by pinching the globe it acted upon the chloride of potash and sugar so as to produce fire.

The Cicada Fable.

Several species of insects have apparatus for producing sounds similar to that of the grasshopper or modifications of it. Of a different type is that with which the cicadas are endowed. Only the males of this family are singers, for which the Greek poets called them happy because their females were dumb. With the ancients a cicada sitting on a harp was the symbol of music. A pretty fable tells of the contest between two cithara players, in which the curious event happened that when one of the contestants broke a string a singing cicada sprang on his harp and helped him out so that he gained the prize.

The World of Trade.

"Yesterday I bought," writes a correspondent, "some black jet buttons, and when I got home I found on the card, 'Best Australian Make.' I took a pencil to write in my account book. I found it had 'U. S. A.' upon it. I sharpened the point, and on the sharpener was 'New York.' I got out a match to light the lamp, and on the box was 'Made in Sweden.' I lit the lamp and found on it, 'Made in Bavaria,' and so on and so on."—London Telegraph.

The Ideal Saddle Horse.

The ideal saddle horse is from fifteen to sixteen hands high, short backed and well coupled. It has thin, high withers, a long, well arched neck and a long, keen ear well set on the head. The tail should be set high on the rump, and the rump itself should be somewhat sloping. The horse should have besides flat, sinewy bones in its legs and a medium sized foot.—Country Life in America.

Understood His Business.

Fashionable Tailor—Go front at once. Two young clerks there after suits. New Man (whispering)—I'm waiting on a millionaire. "Leave him and attend to the clerks. These millionaires don't buy new clothes once in five years. A clerk is good for a fresh suit every three months."—New York Weekly.

The Difficulty.

Mr. Rooke—I hope you didn't believe what they said about me. Miss Budd—I make it a point never to believe more than half I hear. Mr. Rooke—But the trouble is you women generally believe the wrong half.

Playmates.

Mother—Tommy, I don't like to have you play with boys who are bad. Tommy—But the good boys are no good, mamma.—Chicago News.

Chronic Case.

"Has your wife complained very long?" asked the doctor. "Ever since we were married," replied Meekly sadly.

It's hard to find heaven by looking down your nose.

SATURDAY

GREATEST BARGAIN CARNIVAL AT THE PEOPLES WAREHOUSE

SEE OUR WINDOWS FOR THE GRANDEST LIST OF GENUINE, UNADULTERATED BARGAINS EVER OFFERED IN PENDLETON. HERE THEY ARE—READ, THEN COME TO HEAD-QUARTERS FOR REAL BARGAINS OF WORTH ON DESIRABLE MERCHANDISE:
