Louis Hunziker
Jeweler & Optician

Mild Ginger Ale 5 cents, Hires Delicious Root Beer 5 cents, Red Grape Phosphate 5 cents, Ginger Frappe 10 cents, Vanilla, Chocolate and Tutti Frutti Ice Cream 10 cts.

AT **KOEPPENS' SODA FOUNTAIN**

RAIN AT HELIX LAST NIGHT.

Suspended Work, But Did Not Damage Crops.

M. A. Ferguson, editor of the Helix Herald, has been in the city this afternoon and reports that a heavy rain fell at Helix last night, but the storm during the afternoon amounted to but little.

According to Mr. Ferguson the rainfall at Helix was about the same as here, judging from appearances. He says no damage was inflicted by the storm other than that the threshers have been unable to work today, though they are preparing to commence again in the morning.

Brain Fever Caused Death.

The 4-months-old child of Mr. and Mrs. W. H. Jones of East Court street died last night at the home of Mr. and Mrs. Carl Gulott, from the effects of brain fever. The funeral will occur tomorrow morning at 10 o'clock.

Suit for \$450.

J. M. Wise has commenced suit against George Carnes to recover possession of a piano, or to secure a judgment for \$450 for the same. The complaint was filed Saturday afternoon by Winter & Collier.

KILLED HIMSELF.

Rejected Suitor Carried Out Announced Intention.

Richmond, Cal., Aug. 12.—Because Marne Pinnel refused to marry him and threw his ring at his feet on the street on the wedding day, Louie Folletta, a butcher, suicided by shooting in the mouth, in a vacant lot last night. They were to have been married yesterday.

Folletta met his bride-to-be on the street with another suitor, and after soundly beating his rival he announced his intention to suicide.

MUCH PROPERTY BURNED.

Hay Land, Stamp Mill and Many Buildings Destroyed.

Riverside, Cal., Aug. 13.—A thousand and acres of hay land near Perris, Riverside county, were burned over Sunday. A stamp mill in the Virginia mine and the buildings of the Indian Queen mine were destroyed, together with several houses, apiaries and much grain.

The fire was started by hunters. The Virginia mine was owned by J. W. Duff of Los Angeles. The fire is under control this morning.

Paying Teller is Short.

Birmingham, Ala., Aug. 13.—Alexander Chesholm, paying teller of the First National bank, was arrested and confessed to a shortage of \$100,000.

Chicago Wheat Market.

Chicago, Aug. 13.—Wheat opened 72¼, closed 72 3/8; corn opened 49 5/8, closed 49 1/2; oats opened 31 5/8, closed 31 1/4.

A pleasant surprise. While the folks are away buy that new carpet and furniture at Baker & Folsom's.

GODFREY'S TANKARD.

A Seventeenth Century Relic of the Plague in London.

A curious historical relic of London is the large tankard of solid silver presented by Charles II. to Sir Edmund Berry Godfrey for his valuable services during the plague and the fire of London, for which he received the honor of knighthood in 1693. The tankard, which is of plain silver, has a hinged cover and weighs nearly thirty-six ounces. Its front is engraved with the royal arms and the crest of the recipient, together with inscriptions in Latin and engravings of scenes connected with the fire, which are still in excellent preservation. The engraving of the pesthouse men carrying corpses to the dismal plague pit and that of the crowded blocks of houses surrounded by flames are very quaint and curious.

Sir Edmund, who was born in 1621 at Sellinge, in Kent, was a timber merchant, possessing wharfs at Dowgate city and at Charing Cross. He prospered, became justice of the peace for Westminster and member of parliament for Winchelsea. In history, as no reader of Macaulay and Green will need to be told, his name is most famous in connection with his mysterious murder, which was popularly attributed to the zeal with which he had devoted himself to unraveling the alleged popish plot. His body was found in a ditch near Primrose hill, face downward and penetrated by his own sword, under circumstances which precluded the idea of suicide or robbery.

The excitement caused by this still mysterious event is indicated by the fact that when the funeral procession left the city, with great pomp and pageant, for the burial ground of St. Martin-in-the-Fields, it was preceded by 70 clergy and followed by upward of 1,000 persons of distinction.

THE SOLAR SYSTEM.

Some Facts Which Give an Idea of Its Immensity.

In all the heavens, with the exception of passing meteors or meteorites, not one body occupies a position closer to earth than the moon, which is some 240,000 miles away—very far, of course, side by side with any earthly distances, but a mere fraction side by side with other astronomical distances. Next to the moon our nearest occasional neighbor is Venus, and then Mars. Both Venus and Mars, however, are often farther away from us than the sun, which remains always at somewhere about the same distance, roughly at from 90,000,000 to 93,000,000 miles.

This dividing space between sun and earth is of great importance in thinking about the stars, and it should be clearly impressed upon the mind. Next to the sun in point of nearness come the more distant planets—Jupiter, which is about five times as far from the sun as our earth is; Saturn, nearly twice as far as Jupiter; Uranus, nearly twice as far as Saturn, and Neptune, nearly three times as far as Saturn. All these planets belong to our sun, all are members of his family, all are part of the solar system. The size of the solar system as a whole, consisting thus of the sun and his planets, including our earth, may be fairly well grasped by any one taking the trouble to master two simple facts. They are these, that our earth is roughly about 92,000,000 miles away from the sun and that Neptune, the outermost planet of the solar system, is nearly thirty times as far distant from the sun as our earth is.—Chambers' Journal.

AN ODD BIRD.

The Kiwi of New Zealand Has Some Remarkable Peculiarities.

That queer bird, the kiwi, is a native of New Zealand. Its remarkable peculiarities are, first, the apparent absence of wings, as the plumage so covers the small, rudimentary, stick-like appendage of a wing that none whatever is apparent. The situation of the nostrils at the bill's extremity is a second peculiar feature. While hunting for earthworms it probes the soft ground, making a continual snuffing sound. Thus the scent is evidently of great help in finding food and the reason for the position of the nostrils quite apparent.

A third peculiarity is the very disproportionate size of the egg in comparison to the bird, it being a little less than one-fourth the bird's own weight. One kiwi's egg found weighed fourteen and one-half ounces, while the bird weighed just under four pounds (sixty-four ounces) and was about the size of an ordinary hen.

The plumage of the kiwi is a dull brown streaked with light gray, and the body resembles a miniature hay shock, rather badly backed off at the rear part, as nature has not provided the kiwi with such decoration as a tail. The absence of wings is compensated for by its swiftness of foot, and the large, clumsy looking legs, which are sometimes used as weapons, are placed far back on the oddly shaped body.—St. Nicholas.

That Was All.

A young girl who is always trying some new thing was present once when the doctor set a neighbor's broken arm. She was sure that she knew exactly how it was done and rather anxious to put her new knowledge into practice. Some time later a hen out in the chicken yard broke its leg. The girl directly announced that she meant to set it "and make it as good as new." Accordingly it was put into a plaster cast and left for the proper length of time to knit. When the day came to take off the cast the girl ran out to the henhouse in great eagerness

to see the result. Presently there was a scream that brought every member of the family to her side. The chicken was jumping miserably over the ground sideways instead of directly forward. You know a hen's leg has a crook. Well, she had crooked it the wrong way, that was all.

THE WIND BELL.

How It Is Constructed in Japan, Its Original Home.

The wind bell, as the name implies, is made to ring by the action of the wind—in fact, the wind bell is not a bell at all, strictly speaking, but a contrivance composed of a number of pendants suspended from a wire or a ring and which, when blown from a ring and thus set in motion, so that they will come in contact and produce sounds when swayed by the winds.

Some wind bells produce sounds that are pleasing and musical. Some are made with glass pendants, some with pendants of metal, some are very small and simple in construction, others are large and massive and elaborate.

The original home of the wind bell is Japan. In its simplest form it is composed of a number of narrow strips of glass, perhaps six inches in length, suspended by three from a wire ring about two inches in diameter. Within the circle formed by the strips thus suspended is hung by one corner a little square piece of glass halfway down the length of the long strips, the strips and the square piece ornamented with various Japanese characters and designs. This wind bell may be hung up wherever a breeze will strike it and blow the strips into contact with one another and with the square suspended among them.—Detroit News-Tribune.

Artificial Birds.

In very early times men began to experiment with a view to making artificial birds and animals that would imitate the motions of living creatures, and if we are to believe the records, some of the artists in that line were remarkably successful.

Archytas of Tarentum, who lived in the year 400 B. C., constructed an artificial pigeon that could fly, but which was not able to resume its flight after once alighting.

John Muller, a German of great mechanical skill, constructed an artificial eagle, which on the entry of Emperor Maximilian into Nuremberg flew out to meet him, and, returning, alighted on the city gate to await his approach.

A Parson's Swearing.

"Parson" Blodgett, a former local preacher residing in Linden, had in front of his house a watering trough freely patronized by people riding by. One evening a man hurriedly drove up to water his horse, and the wheel of his wagon struck the trough violently. The "parson" came out hurriedly and cried: "Hog rabbited to hemp seed tobacco! Can't you drive straight!"

"Go in and shut the door," replied the driver, "and next time you want to swear, parson, do it like other men."—Boston Herald.

A Funny Siamese Custom.

They have a very funny custom in Siam. When an inferior comes into the presence of a superior he throws himself upon the ground. Then the superior sends one of his attendants forward to see whether the prostrate man has been eating anything or has any offensive odor about him. If he be blameless in this respect the attendant raises him from the ground, but if he be guilty the attendant straightway kicks him out.

Liquor in Candles.

"Practically every known liquor, as well as whisky and brandy, is made up into candy in one form or another," says a Chicago confectioner. "You can get in bonbons of various kinds cream de menthe, cognac, kumel, Chartreuse, cherry brandy or benedictine."

An Old One in a New Way.

Little Willie—Say, pa, what was the first talking machine made out of? Father—Well, my boy, the first one was made out of a rib.—New York Times.
