BENEFITS OF AN OPEN COLUMBIA

One of the prominent numbers on the program of the recent graduating exercises of the Walla Walla high school was an oration by Miss Florence Reeder, member of the senior class on "The Open Columbia," says the Walla Walla Union. In her remarks Miss Reeder showed a close and careful study of the situation on which she was speaking and delivered her words with force and conviction. Pertaining as it does to one of the most vital questions in the development of the northwest her address was especially appropriate. Following is the oration, in part:

"People of Washington are interested as never before in the opening of the Columbia river. The lack of irrigation, the conditions of the waterways and navigation, demand that this should be done for the best interests of the people.

"River systems of this country are better adapted to the needs of the people than those of any other. Rivers in no civilized country are so poorly developed or play so small a part in the industrial life as do the rivers of the United States.

"Plans should be considered to secure to the people the use of these waterways for power, irrigation and domestic water supply as well as navigation. In fact there are five allied interests in the opening of the rivers—navigation, irrigation, power, forestation and sanitation.

"Not one but every waterway should be made to serve the people as largely and in as many ways as possible. It is poor business to develop a river for navigation in a way to prevent its use for power. By a little foresight, it could be made to serve both purposes. It is needless to sacrifice power for irrigation or irrigation to domestic water supply, when we may have all three. All streams should be used to their utmost. No stream can be so used if use is not planned for in advance. One plan can be made to assist another. Each river system from its headwaters in the forest to its mouth on the coast is a single unit and should be treated thus.

"Much has been done but more must be done, before a detailed plan of development can be made. Additional information is needed on the flow of the streams, conditions for channels, amount and cost of water traffic, requirements for terminals, but it is not necessary to postpone the beginning of the work until all the facts are obtained.

"Eighty million acres of arid lands lie in the northwest. One million acres, under irrigation, are found as fertile as any soil.

"Not one-tenth of the irrigable land of the inland empire is under irrigation. Even now railroads are congested and not able to handle traffic. With the other nine-tenths farmed, as it all must be in the next few years, railroads will prove absolutely inadequate. Traffic in this country has increased over 100 per cent in the past five years. Railroad facilities have increased less than 20 per cent. Unregulated railroad completion has destroyed the development of the commerce.

"Corporations or monopolies should be prohibited from the use of perpetual power, irrigation franchises of inland waterways. These franchises should be held for the benefit of the people.

"A bill is before congress urging the necessity of building a dam at Priest Rapids in the Columbia. The power developed is immense for either electrical ways or other purposes. These rapids are the biggest obstructions to navigation on the upper river. A canal around would mean open navigation on that river.

There is also a movement for the construction of a dam at Five Mile Rapids in the Snake river. By means of this thousands of acres of arid lands in Walla Walla, Franklin and Benton counties could be irrigated.

"Prospects for substantial appropriations to aid the open Columbia are bright. The fact that the Columbia river was mentioned in the president's message augurs well for a liberal gift from the federal government.

"A bill has been proposed for a com-

The Cause of Many Sudden Deaths.

There is a disease prevailing in this country most dangerous because so deceptive. Many sudden deaths are caused by it—heart disease, pneumonia, heart failure or apoplexy are often the result of kidney disease. If kidney trouble is allowed to advance the kidney-poisoned blood will attack the vital organs, causing catarrh of the bladder, or the kidneys themselves break down and waste away cell by cell. Bladder troubles almost always result from a derangement of the kidneys and a cure is obtained quickest by a proper treatment of the kidneys. If you are feeling badly you can make no mistake by taking Dr. Kilmer's Swamp-Root, the great kidney, liver and bladder remedy. It corrects inability to hold urine and scalding pain in passing it, and overcomes that unpleasant necessity of being compelled to go often through the day, and to get up many times during the night. The mild and the extraordinary effect of Swamp-Root is soon realized. It stands the highest for its wonderful cures of the most distressing cases.

Swamp-Root is pleasant to take and is sold by all druggists in fifty-cent and one-dollar size bottles. You may have a sample bottle of this wonderful new discovery and a book that tells all about it, both sent free by mail. Address, Dr. Kilmer & Co., Binghamton, N. Y. When writing mention reading this generous offer in this paper. Don't make any mistake, but remember the name, Swamp-Root, Dr. Kilmer's Swamp-Root, and the address, Binghamton, N. Y., on every bottle.

plete survey of all points not surveyed along the Columbia. There are three hundred miles of navigable waters in Canada known as Arrow Lakes. Between these lakes and Bridgeport is a short reach. This would involve international affairs between our government and the government of Canada. Surrounding these lakes for miles are thousands of acres of valuable timber land. The country tributary to these lakes consists of vast areas of agricultural land. A line of steamers runs on these lakes continuously. Canadian people of this region are anxious to join with people on the American side for the purpose of an international connection between the Columbia and Arrow Lakes.

"In the opening of the Columbia to the river's very headwaters, one of the greatest projects in the history of the west will be consummated. Produce from vast areas of rich agricultural and forest lands may be sent down the river to the rich orchard and grain country—along the Columbia. Thus opening up the headwaters of the river connecting Arrow Lakes with the sea, and opening up the whole vast northwest to a water-borne commerce.

"Development of waterways will have results far beyond the immediate gain to commerce. Use of water power will measurably relieve the drain upon the diminishing supplies of coal. Transportation by water instead of rail will tend to preserve the iron.

"Irrigation would create a livelihood for millions of people. Supplies of pure water would promote the public health. If the policy of waterway improvement is carried out it will effect good for every citizen.

"The cost of improving inland waterways will be large, but far less than would be required to relieve the congestion of traffic and railroad extension. Cost and benefits should be equally divided by corporation with the states, communities, corporations, or individuals, beneficially effected.

"Improvements of inland waterways can and should be made to pay for itself. Navigation should be free.

"Benefits will be large and will touch the daily life of the people at every point uniting the interests of our country. But the greatest return will come from increased commerce and prosperity."

WEEK'S WEATHER.

Cloudless Skies in Most Parts of Oregon.

Except along the immediate coast, where cloudiness was prevalent, the weather during the week was characterized by almost cloudless skies. This was particularly true of the counties west of the Cascades, where no rain occurred. In the eastern counties there were frequent thunderstorms during the early days of the week, which were usually attended by high winds. The precipitation accompanying these storms was generally very light and in many instances was entirely lacking. This caused a dusty condition of the atmosphere in localities that was very discomfiting. Temperature during the day were unseasonably high except along the coast but at night did not vary much from the normal.

Columbia River Valley.

Hood River, Wasco county, H. L. Hasbrouck.—No rain occurred at this point during the week, although distant thunder was heard from the southwest. Temperatures were unseasonably high.

The Dalles, Wasco county, S. L. Brooks.—Normal temperatures and northerly winds, with clear skies, prevailed during the week.

Heppner, Morrow county, George Whites.—The week was clear and warm.

Condon, Gilliam county, S. C. Dodson.—The weather was mostly clear and warm. The prevailing winds were northwesterly.

Mikkalo, Gilliam county, J. F. Chandler.—The fore part of the week was clear and very warm, but the last two days were cooler and more pleasant.

Umatilla, Umatilla county, Helen T. Duncan.—The week was very warm and clear, with several days of fresh winds causing duststorms on Tuesday and Wednesday.

Hermiston, Umatilla county, C. W. Kellogg.—Clear and warm weather prevailed.

Pendleton, Umatilla county, H. F. Johnson.—The weather was hot and dry, only a trace of rain falling on one day. There were six clear days and one partly cloudy day.

Weston, Umatilla county, Maud M. Baker.—The week was warm and pleasant. Light thunder was heard occasionally and there were indications of rain on one or two days, but no rain fell.

Wallowa, Wallowa county, L. J. Coverstone.—The week pleasant and warm. Thunderstorms occurred on Wednesday and Thursday afternoons, and a high wind prevailed on Thursday.

Ontario, Malheur county, William O'Brien.—The fore part of the week was partly cloudy and the latter part showery. High winds were frequent.

Granite, Grant county, L. N. Ford.—Warmer weather prevailed. Light rains were frequent.

Warm Springs, Crook county, C. C. Covey.—Warm weather prevailed, the first of the season. It is still, however, dry and windy.

Lee Putnam of the Dalles, was instantly killed Saturday night by Alex Dalrymple, who hurled a rock at Putnam at a distance of 10 feet, striking him below the ear and killing him instantly. The men had been engaged in a fist fight and were separated, when Dalrymple picked up a rock about as large as a goose egg and hurled it at his enemy, causing instant death.

Store Closed all day Fourth of July

Can It Be Possible?

During the past year a vacuum bottle has been put on the market which will keep contents hot for 24 hours, warm for 48 hours and cold for 72 hours. The bottle consists of two glass bottles, joined at the neck, one bottle being within the other, a vacuum space between the two bottles prevents outside temperature from reaching the inner one, thus permitting contents to remain hot or cold (the same temperature as when placed in the bottle) for days at a time. A. C. Koeppen & Bros, the druggists, have received some and the public is examining them every day.

Kodol is the best known preparation that is offered to the people today for dyspepsia, indigestion or any stomach trouble. Kodol digests all foods. It is pleasant to take. It is sold here by Tallman & Co.
