EDUCATIONAL IDEALS OF Y. M. C. A.

H. W. Stone, general secretary of the Y. M. C. A. at Portland, writes the following interesting article on the educational ideals of the Y. M. C. A. for the Portland Chamber of Commerce Bulletin:

Our educational system has not been leading the boys of Portland up to the thought of "making" a living so much as it has the idea of "getting" one. The grammar grades provide for the high school or academy, and they in turn suggest the college or university, where the man finally blossoms out into the professions.

Here, instead of creating wealth, they seek to secure a living in fees or salary as professional men, or from profits, interest on wealth already created or from the rise in value of natural resources.

If the young men do not enter the professions (and only a limited number can) their idea is to go into "business" as an agent or trader, but practically never to become a producer or a creator of wealth.

Mining has been considered a gamble; the boy has been educated away from agriculture; he has had no ideals of making or creating anything, so of course manufacture does not apply to him.

The so-called culture education of the schools has fitted the Oregon boy to see in the forest not furniture and finished products of wood, but timber to be held for a rise or sold for a commission; in the clay bank not brick, tile, cement or paint to be produced by work, but a chance to gain and hold areas for a profit.

We are ever boasting of our great natural resources, but our educational system has trained our boys not in shop work, drawing, natural sciences and mathematics to fit for taking these resources and by work turn them into real wealth, but rather to consider them only as something to be exploited for their private benefit.

In saying this, it is not intended to urge that the literary, professional and commercial schools of all grades are worthless or not worth all they have cost.

On the contrary, they each minister to a class, and are, generally speaking, invaluable. It is only intended to urge that they are one-sided, that they only partially meet the needs of

the situation, and that their theories and plans and methods are such that it is impossible for them to meet it completely. Nor is it intended to imply that the public schools are not doing the work they are arranged to do, in an efficient manner. On the contrary, again, the buildings, average far better, the equipment is many times better, the courses are more complete and more logically related, and the teachers much better prepared and certainly no less conscientious than ever before in the history of the city.

It is only suggesting that, in the interest of the common people and of the city, the kinds of schools must be multiplied, that the educational scheme must be broadened, and that the work of the lower schools must have much more bearing upon the labor of the people.

There is constant complaint that the schools do not fit children for any ordinary duties in the stores and offices and factories. It also keeps children from getting work of any kind when they leave the elementary schools. If they get work, it amounts to little and too often leads to nothing.

All the conditions taken together almost force children to keep in the school system and go on toward the professional and managing vocations which are more than full, and for which they lack adaptation; or else be out of work for several years. As a fact, large numbers of them are out of school and also out of work for a long time, if not for all time.

A decided move is coming here in Portland to change this condition by the school board and from private sources. The Y. M. C. A. seven years ago started a manual training school in a small way, employing two teachers and putting in a good shop equipment. Later the public school took up this work, taking the association teachers, and now this work is carried on at seven different centers in the city.

About seven years ago the Y. M. C. A. also started regular trade school work, having classes in plumbing, carpentry, show-card writing, telegraphy, shop electricity, practical printing classes, besides mechanical architectural drawing and other vocational subjects, and is this season enlarging

and strengthening this work.

This year the school board has taken a decided step in advance, establishing the Portland School of Trades, having selected as principal of the work Mr. Hamilton, a man of thorough training and experience, who will have four teachers associated with him. The work is to be located in the Atkinson school. The equipment and machinery are of the very best and latest design. By many thoughtful manufacturers and business men of the city it is believed that this school means great things for the industrial life and welfare of Portland.

The board of education makes the following official statement in respect to the work of the Portland School of Trades:

"The object of this school will be to furnish instruction to the boys of this city in some trade that they may be better fitted for their life work. Opportunity will be given for instruction of the following trades: Carpentry, cabinet making, pattern making, moulding, electrical construction, machine shop practice, mechanical and architectural draughting and plumbing.

"Such academic branches as English, mathematics, applied physics and electricity and industrial chemistry will be included in the course. Special attention will be given to these subjects as they relate to or have bearing on the trade work."

Pineules for the Kidneys, 30 days' trial \$1, guaranteed. Pineules act directly on the Kidneys and bring relief in the first dose to backache, weak back, rheumatic pains, kidney and bladder trouble. They purify the blood and invigorate the entire system. Sold by A. C. Koepfen & Bros.

Oklahoma Republicans.

Oklahoma City, Okla., Aug. 11.—An organization meeting of the republican state central committee was called here this afternoon, preliminary to tomorrow's republican state convention. Republicans from all over the state will take part in the demonstration, which will be of the nature of a Taft and Sherman ratification meeting. Speakers of national reputation have been engaged and will call upon the citizens of the new state to elect "safer and saner" state officials.

Tomorrow's official convention will promulgate a platform of party principles and will confirm the selection of the republican candidates elected at the recent primaries.

WORKS HIS FARM BY ELECTRICITY

PUSHES A BUTTON AND THE REST IS EASY.

Steam Proved too Slow and Lightning Was Harnessed—Grain Reaped, Stacked, Threshed, Sacked and Made Ready for Market by Powerful Juice.

(From the New York World.)
Thomas W. Lee, until about two years ago general passenger agent of the Delaware, Lackawanna & Western railroad, with headquarters in New York, is the first man in the world to farm by electricity. Mr. Lee owns the Bungalow, a tract of more than 2000 acres in the vicinity of Idaho Falls. All that Tom Lee has to do now when he wishes to farm is to push a button. Electricity does the rest. The ground in the Bungalow was broken for cultivation two years ago. The first season it returned a profit on grain. It is fenced, has fine buildings, machinery and stock and is managed by a man to whom system is as necessary as breath.

One year ago Mr. Lee utilized steam, but that proved too slow and too expensive. This year the grain of the Bungalow will be reaped, stacked, threshed, sacked and made ready for market by electricity.

Mr. Lee has installed private telephone and electric wires. These wires, erected at his own expense, are stretched two miles from the main line of the power company. These poles carry three wires, which are used for both power and lighting purposes.

Water is pumped, grindstones turned, saws, corn shellers, root cutters, hay forks, hay cutters, cider mills, grist mills, ensilage cutters, cement mixers, turning lathes, ice cream mixers, churns and separators are all run by electricity. A 25 horse power electric motor accomplishes all these things.

This season the entire crop of the Bungalow, aggregating 2000 tons of hay, alfalfa and clover, 40,000 bushels of grain, and potatoes and other products, will be placed on trucks and with cable reels be handled with greater facility than it could ever be handled with human hands.

The cost of steam, with the coal and labor, was much greater than that of electricity. During the threshing season labor alone cost \$50 a day for 25 days. Mr. Lee figures that the installation of electricity means a saving for the first year of \$2,200 on first cost, and thereafter the cost of operating will be about one-fourth the former figures. During the threshing season the cost with the electric current will be only \$400, as against \$1600 with steam.

Aside from the saving, Mr. Lee says the power is reliable, constant and doesn't go on strike; the danger of fire is eliminated and the satisfaction constitutes not the smallest feature.

In Honor of Cheyenne.

Cheyenne has had a national forest named after it. President Roosevelt has issued an executive order prescribing that hereafter the Crow Creek national forest and that part of the Medicine Bow national forest in Wyoming shall be known as the Cheyenne national forest, says the Cheyenne Tribune. The order recites that it is not intended to interfere with or disturb the rights which the war department has under existing executive orders in the Crow Creek national forest, which will form part of the Cheyenne national forest.

Why James Lee Got Well.

Everybody in Zanesville, O., knows Mrs. Mary Lee, of rural route 8. She writes: "My husband, James Lee, firmly believes he owes his life to the use of Dr. King's New Discovery. His lungs were so severely affected that consumption seemed inevitable, when a friend recommended New Discovery. We tried it, and its use has restored him to perfect health." Dr. King's New Discovery is the King of throat and lung remedies. For coughs and colds it has no equal. The first dose gives relief. Try it. Sold under guarantee at Tallman & Co.'s drug store, 50c and \$1.00. Trial bottle free.
