FARMERS' UNION HARD AT WORK

DELEGATES REPRESENT 1,000,000 FARMERS

Object of Big Organization to Get Fair Prices, Cut Out Middlemen's Profits, and Widen the Market for Agricultural Products—Most Powerful Organization in World's History.

Fort Worth, Tex., Sept. 1.—Delegates from all over the south and from many central and western states, representing over a million American farmers, are today gathering in Fort Worth for the national convention of the largest and most powerful organization of agricultural interests in the world's history.

The Farmers' Educational and Co-operative union, familiarly known as the "farmers' union," was originally organized to maintain a fair price for the south's cotton crop, but the present convention finds it a truly national body, with all classes of farmers represented.

It is likely that Charles Barrett of Georgia, under whose guiding hand the union has made its great strides in the past, will be reelected as national president.

The union is organized on entirely different lines from any organization of farmers ever got together. Instead of trying to force down the prices of goods they purchase, except so far as to cut off the profits of the middlemen, their principal object is to get better prices for the products of the farm. They have also formed an alliance with the labor organizations of the various states and of the American Federation of Labor.

The union is especially strong in the south and west, although thousands of farmers in the northwest are joining the organization daily.

As a business organization it has overturned the old order of things as advanced by the Grange and Farmers' Alliance. It believes that the better wages paid workmen the higher prices the latter can pay for farm products and more will be consumed.

Hence, under the principle of business they attempt to bring into force, the farmer and worker are brought together in material interest instead of being forced apart.

This is the first organization in the history of the farm that has stood by organized labor and joined with it in the effort to benefit the condition of all labor. Its members teach that the interests of the farmer and worker are identical.

The principal business of the Farmers' union is to make prices for the products of the farm. In 1894, when the largest cotton crop in the history of the world was produced, and the price was sent down to 5 cents a pound at interior points, the Texas farmers showed what they could do through organization.

They held their cotton until the price was forced back to 10 cents a pound. This at the time was regarded as the greatest industrial victory ever gained by an organization of this character.

Since then in annual convention they have fixed the minimum price at which members would—and they always got it—sell cotton. Before that speculators fixed the price.

LIGHT DEMAND FOR HAY.

Small Shipments Are Being Made But Business Is Dull.

"The hay business is not opening up very fast," said a Baker City commission man today, says the Herald. "We had hoped that there would be a strong demand for hay this season as Powder Valley has lots of it to sell, but as yet there has been few inquiries and very few orders."

"A few carloads have been shipped to Portland, but commission houses there seem to be waiting with the full belief that prices will drop. Whether this is to be or not no one is able to say. The fact is, however, that there is a much larger hay crop in the northwest than had been predicted."

If you are a sufferer from piles, Manzan Pile Remedy will bring relief with the first application. Guaranteed. Price 50c. A. C. Koeppen & Bros.

Takes a wise old sport to know just when and what size bet to lose to the woman he is trying to win.

COFFEE

SPokane IS SEEKING A WATER SUPPLY

The Sunday Spokesman-Review says of the seriousness of the water supply question in the city of Spokane:

With Spokane using 29,500,000 gallons of water a day, an amount 33 1-3 per cent in excess of that used by Seattle or Portland, and almost three times that used by Tacoma, the question of supply and demand becomes one of the utmost importance to every individual.

When every man, woman and child within the city limits uses on an average of 300 gallons of water every day, the problem becomes one for early solution, for such an average is probably unparalleled in any other city in America.

When the United States government reports show that the flow of water in the Spokane river at this point has decreased 40 per cent within the last 10 years the importance of an early solution of the problem becomes apparent.

Spokane is now securing its water supply from an underground well. The water is of a splendid clearness and purity, but whether the supply is inexhaustible or will meet the demands of a city growing so rapidly as Spokane has not been determined.

The pumping capacity of the water plant has been increased at the rate of approximately 10,000,000 gallons a day every other year for the last few years. Mayor Moore recommends that it be increased an additional 10,000,000 gallons per day by next spring.

How long can this be continued; both from the standpoint of the sup-

ply of water in river or well and the financial ability of the city to pay the bills?

What to do both in the immediate and the distant future, is the question. The Priest lake source is recommended by many; other nearer sources have been lost by failure to take advantage of the opportunity in time. Will municipal history repeat itself as regards Priest lake?

These are only a few of the questions involved in the local water problem.

Opinions differ. There are some, like C. M. Fassett, for instance, who regard the present well supply as so excellent that it should be continued and developed, without much, if any, regard to the advisability of taking up the Priest lake project. There are others, like Otto Well, for instance, who believe no time should be lost in revolutionizing the management of the water department, in installing meters and in promoting the Priest lake project. And there are still others, like Mayor Moore, for instance, who believe the well supply is adequate for the present, but the pumping capacity should be increased, yet who are confident the day is not far distant when Priest lake must be called on; when river and well will have failed to meet the demands.

Herewith are covered some of the phases of the problem by interviews with prominent men who have studied the situation and propose remedies.

DeWitt's Carbollized Witch Hazel Salve is the best thing to use for piles. Sold by Tallman & Co.

NEW PHOTOGRAPHS TAKEN ON MT. RAINIER

Four Yakima people who have just returned from Mount Rainier think they made their camp higher than has ever been made on this side of the big peak, says the Yakima Republic.

They failed, however, to attain the crest of the mountain, and after going about 9000 feet and feeling in every available place they concluded to accept the old idea that there is no ascent from this side.

They had their camp directly above the Big Muddy glacier, but the glacier happened to be 1500 feet below them. The party consisted of S. C. Smith, photographer of North Yakima, and his daughter Hazel; J. L. Courtwright of Yakima City and his sister-in-law, Miss Adams, who is a Seattle school teacher.

They started from Yakima on horses and with a pack train and went right over the crest of the Cascades at Cowlitz, at the coal fields. Mr. Smith says there is an excellent government trail of 30 or 40 miles from directly above the Tieton basin down the Cowlitz from the summit. If it had been broader, he says, it would have been good enough for wagons.

The primary object of the trip was for photographs and Mr. Smith says he had excellent success. He got about a hundred, taken from crevasses and other points of vantage and is delighted with them.

Kodol will, without doubt, make your stomach strong and will almost instantly relieve you of all the symptoms of indigestion. Get a bottle of it today. It is sold here by Tallman & Co.
