DID WE PASS THROUGH TAIL? (Continued from page 1.)

people of Aline threaten to lynch Heinman.

Tail May be Lost. Williams Bay, Wis., May 19.—Halley's comet may lose a part of its tail, perhaps all of it, according to Director Frost of the Yerkes observatory today. He said the tail still showed in the eastern skies after the comet passed the sun's disk. He declares its presence there when it is supposed to have passed to the west, means one of three things: That the curvature of the tail has grown so great, maybe due to the earth's attraction that while the head has passed the tail hasn't; that the comet may have ceased its tail making capacity, and left it behind, or it may be the calculation is wrong and it hasn't passed yet.

Upon the application of rational theory achievement depends.
