

MENS SUITS ONE-HALF PRICE

Beginning Thursday Morning August 18 and Ending Aug. 31.

We will offer men's summer suits irrespective of color, price or size, Exactly **One-Half Price**

The assortment is very complete--all sizes from 34 to 46--Longs, Stouts, Stubs and Regulars

Our famous Hart, Schaffner & Marx Suits are included in this great offering--**THEY'RE THE BEST CLOTHES IN AMERICA.** All-Wool, Correctly Tailored, Serviceable and Perfect Fitting. We never carry our Men's Clothing over from one season to another, hence this sale

NOW IS YOUR CHANCE!--Many of these suits are heavy enough to be worn all winter and any of them are good until late into fall.

The Peoples Warehouse--Where it Pays to Trade

FACTS FOR FARMERS

Poultry Pointers.
When lice get a good start among chickens it takes more effort to get rid of them than it takes to keep them from getting a foothold in the first place.

Hens are more liable to eat eggs if the shells are thin. The shells will be thicker if plenty of lime be had by the hens. Oyster and clam shells are the best artificial lime for poultry.

Although fowls are grain eaters they thrive best with some meat food. When they have free range they provide themselves with this in the bugs, worms and grasshoppers they find.

Eggs will always continue as a popular food because of their food value and palatability. Even when their price is high they are valuable as an article of diet.

Cook some beans or peas, mix them with wheat bran and feed twice a week and see if you don't get a lot more eggs.

It is perfectly natural for chickens to hun at large, and if the weather be suitable, they are much stronger for doing so.

Many a setting of eggs has been spoiled by making the nest on the floor where the wind can come up through the cracks under the old mother hen.

A hen should not be set on more than fifteen eggs. The writer has always made much better success by using thirteen eggs to a hen unless she is unusually large. If given too many eggs hens are sure to break some trying to cover all.

When brood chicks seem very thirty-wild for water, let them drink and feed very lightly while so feverish.

The average egg record for all the pullets and hens in the United States would probably not be as high as seventy-five eggs in a year.

It is hardly worth while to bother with broody hens at this season of the year. The best way to handle them is to chop their heads off and dress them for the table.

Hot Weather Feeding.

Over-feeding, or the feeding of too much fattening food to poultry, is followed by trouble in warm weather, and care should be taken to guard against this mistake. Young chicks and growing chicks especially, should not be fed more than they will eat up promptly three or four times a day. For all over three months old, three times a day is sufficient. With the hopper system--that is, where food is kept in hoppers where the chicks can reach it at any time--the fact that it is always available will prevent them from eating too much at one time. Dry grains, principally wheat and oats, are better than too much mash though an occasional mash will often assist growth.

Fowls, especially those that are confined in yards, need a variety of food at this season of the year, but that variety should not include much corn. It should include green food in abundance and plenty of pure water to drink, fresh, in clean vessels, three times a day.

There is not much danger of turkeys being overfed if a very light feed is given in the morning and the turkeys range during the day and have enough grain given them at evening to fill their crops.

Old ducks, and those intended to be kept over next winter, should have two light feeds a day, in sufficient quantity to keep them in fair flesh. Mash food is best for ducks, though three or four feeds per week of hard grains may be given. Young ducks that are being fattened should receive three times a day a mash composed of three parts corn meal, one part of wheat bran and one part beef scraps, mixed with cold water and fed cold. This will fatten them in from ten days to two weeks.

Geese may be fed both mash and dry grain and if they have a good range they will not need very much at this season of the year because they will pick up a large part of their nourishment when foraging.--Fort Worth Citizen-Star.

Hog Notes.
Never neglect a breeding sow that is nervous, irritable and always on the go.

The hog has time for all that he is required to turn into pork, but he has no time to fight lice.

If the spring pigs are doing well, hold them steady until fall and then push them hard for market.

Given plenty of range clean pens, clean food and water the hog as a rule will take care of himself.

When boar pigs are about five months old they should be separated from the rest of the herd.

A man who insists on breeding his gilts too young will find the quality of his hog herd steadily deteriorating.

Select your brood pigs from the largest litters, as they are generally better breeders and better feeders.

A sow that suckles a big litter of hungry pigs needs a great deal of nourishment, but some farmers appear to be ignorant of that fact.

In the market the bunch of hogs that is even in weight, conformation and color will bring more than the lot made up of all sorts.

The muscles of corn-fed hogs are high in fat and low in protein and low in water in the fat-free meat is decidedly high. The proportion of ash to protein in the flesh of corn-fed hogs, however, is not low.

Rations of corn balanced by protein supplements from sources other than corn appear to be more palatable and more efficient to cause growth in hogs than rations of corn and corn products only.

Relation of Livestock to Farm Prices.
The relation of livestock to farm prices is very close and the more livestock on the farms of the country the better prices of farm products will be.

The price of land is high, mainly because the prices of staple crops are high, and the reason they are high is because so much of them is demanded for feeding livestock, while there is a world shortage of livestock

which keeps up both relative demand and prices for meat in all countries because population is growing faster than the supply of meat animals.

Take away from the farms a considerable share of their livestock and it would follow that such enormous quantities of corn would be thrown upon the market as to reduce its price below the cost of production and such general drop in the value of corn would surely lower the value of lands all over the corn belt, and hence would affect seriously the value of all lands.

It follows, therefore, that if the farmers of the United States would continue to receive remunerative prices for their annual corn crops, and if they would maintain the present general value of farm lands throughout the country, they must keep up or increase the supply of livestock on the farms.

Making Good Butter.

Keep each day's run in a can by itself until it is thoroughly cooled. It can then be put in the general storage can for delivery.

Even the frame of the machine should be kept clean. Some seem to think that their duty is ended when they have cleaned the bowl.

A hand separator presupposes some power other than hand power for running. You may start with the idea that you are going to run it by hand, but you soon realize the economy of something different.

There must be better care all along the line if we would compete successfully with the oleo people. There is nothing they like to hear better than high officials knocking on the separator product in any state.

Dysentery is a dangerous disease

but can be cured. Chamberlain's Colic, Cholera and Diarrhoea Remedy has been successfully used in nine epidemics of dysentery. It has never been known to fail. It is equally valuable for children and adults, and when reduced with water and sweetened, it is pleasant to take. Sold by all dealers.

NEW COINS MAY BE INSCRIBED IN ENGLISH

London.--The production of a new coinage is always a rather slow process, but on the present occasion it may be expedited to some extent.

In the case of the late king, who came to the throne in January, 1901, the order in council and proclamation determining new designs for gold and bronze coins was issued on December 19th of the same year and came into force on January 1, 1902, while the order relating to silver coins was not approved until January 13.

On that occasion there were several changes on the reverse, notably the half-crown and florin, with the object of making the two coins as dissimilar as possible. The only change, it is understood, which will be made in the new coins will be the royal effigy, for which Mr. Bertram Mackinnon, R. A., the Australian sculptor, is now engaged in making designs.

The portrait of King Edward which appears on the present coinage is the work of Mr. De Saules, the then engraver to the Mint, the head in profile being truncated in a similar manner to the effigy on the first coinage of Queen Victoria and on the coinage of most of his late majesty's predecessors since the reign of Charles II. Perhaps the best that can be said for the design is that it is commonplace and inoffensive. There is a confident expectation that Mr. MacKinnon will produce something worthy not only of his reputation as a sculptor, but also of a coinage which, as far at least as gold is concerned, enjoys the largest circulation in the world.

Many suggestions are being made as to alterations which might properly be made in the new coinage. It is contended, for instance, that the inscription should be in English instead of Latin.

State of Ohio, City of Toledo, Lucas County, ss.

Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of Hall's Catarrh Cure.

FRANK J. CHENEY.
Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

A. W. GLEASON,
Notary Public.

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials free.

F. J. CHENEY & CO., Toledo, O., Sold by all Druggists, 75c. Take Hall's Family Pills for constipation.

ITALY IS ANGRY AT OPERATIC HONORS

Rome.--The fact that three Italian composers will visit the United States and that two new Italian operas will be given for the first time in New York has caused some adverse comments in the Italian press. Up to this time new opera was never allowed to go out of Italy without being first submitted to the verdict of Milan, Naples and Rome, except the case of Verdi's "Aida," which was first produced in Egypt at the time of the opening of the Suez canal.

The Italian public will consider the present departure quite a slight and composers will be called to account for it when they again seek popular approval. That is as it may be. The fact remains that Puccini, Mascagni and Don Perosi, the Sistine Chapel music director, are all scheduled to appear some time this year in New York, and Puccini's "Girl from the Golden West," as well as Mascagni's "Isabeau" are both to be heard for the first time in New York.

Puccini's opera is completed and Mascagni is just now writing the bars of "Isabeau" in his home at Castle Arquato.

Do you take the East Oregonian?

Byers' Best Flour

Is made from the choicest wheat that grows. Good bread is assured when BYERS' BEST FLOUR is used. Bran, Shorts, Steam Rolled Barley always on hand.

Pendleton Roller Mills
Pendleton, Oregon.

LADY HEADFORT IN SCHOOL FOR SCANDAL

London.--Those who knew Miss Rosie Boote, of the Gaiety theater, in the old days would scarcely recognize her now, as she is sprightly, but always dignified, Marchioness of Headfort, who is at the moment entertaining a very large house party at Headfort House, Kells, Ireland. In spite of her humble origin, Lady Headfort has, with her almost American genius for adapting herself to her surroundings, broken down all social barriers, and she is not only immensely popular

with all classes in Ireland but is gathering a very influential circle of friends in London.

Like another Gaiety favorite, Connie Gilchrist, now the Countess of Orkney, Lady Headfort is a splendid horsewoman, and she hunts regularly with her husband during the winter months. She is worshipped by the peasants in the Kells district, who call her "Our Rosie." Lady Headfort finds plenty of time for music and reading. She is a voracious reader of good literature, and amazes people who meet her for the first time with her knowledge of art and books.

The big house party which has assembled at Kells is busy rehearsing for a performance of "The School for Scandal," which Lady Headfort is organizing for a local charity. This will be her first appearance on any stage since she left the Gaiety theater. The marquis, who is an extremely amiable but not over brainy, young man is going to play a small part in the play. Lady Headfort will be the Lady Teazle and Sir Anthony Weldon, a well-known amateur actor and sporting baronet, will take the part of Sir Peter Teazle.

Lord Farnham and Sir Charles Waters are two other members of the house party who will appear in the play. Organizers of charity performances in London are beginning to hope that now that Lady Headfort has "broken the ice" they will be able to induce her to make an appearance on the stage in town.

Up to the present they have signally failed in their attempts to secure the marchioness as a "star turn." In some respects Lady Headfort is like the late Countess of Clancarty, who was Belle Bitton, of the variety halls, and who hated the sight of the stage after her marriage.

When the digestion is all right, the action of the bowels regular, there is a natural craving and relish for food. When this is lacking you may know that you need a dose of Chamberlain's Stomach and Liver Tablets. They strengthen the digestive organs, improve the appetite and regulate the bowels. Sold by all dealers.

15,065 Patents a Year.
London.--Some of the principal ideas that have recently occupied the mind of inventors make the report of the comptroller-general of patents almost as interesting as a novel.

Even the unguarded points of ladies' hat pins have not escaped the inventors' vigilance, and numbers of patents have been applied for in connection with suitable point protectors. Altogether, during 1909, 30,503 patents were asked for, the highest number but one on record, and the number granted was 15,065.

One of the outstanding features was the development in aeronautics, more than three times as many patents being applied for in connection with flying machines as were received the year before. Inventors also gave considerable attention to electric railway signaling systems, in which the track rails were used for both the signaling and the power circuits.

FOR SALE---MUST BE SOLD

One Quarter Section of Land Improved. 2 miles South of Pendleton on Tutuilla Creek on road leading from Pendleton to Pilot Rock

A Neat Cottage, Good Barn, Chicken House, Wood House, Wash House with Furnace. A well of good water. Water main through yards, piped to barn. A good cistern with soft water. 70 acres in summer follow. 90 ton of hay well stacked, cut from 60 acres of Spring sown grain. Stock, Farming Implements, 250 white leg-horn Chickens, Household Furniture.

Price reasonable. Owner will step out and leave everything. Good reasons for selling. For further particulars call at the above said Farm.
