

Our Great Remodeling Sale

is entering, today, upon its third week. It has been a most gratifying success. The exceptional bargains we are giving are just what everyone has been waiting for.

We are offering new, seasonable goods NOW at prices far below their real value.

The carpenters will soon be working here and we must have more room. Prices will not stop us, the goods MUST go. Now is the time for you to buy, don't wait until someone else has taken the best things.

Our Ready-to-Wear Dep't

has added a bargain of special attractiveness that cannot fail to add zest to the many excellent values to be had at our great Remodeling Sale. For this money saving event, all

White Cloth Suits,
values up to \$35 for
Only \$7.95

There are just 22 suits in this lot in both plain tailored and novelty styles in misses' and women's sizes, made of excellent all wool materials, such as plain and wide vail serges, sharkskin, basket cloth and whipcord. Included are a few white suits with black hair line stripes. The price asked for these suits is really not sufficient to cover the value of the skirt. \$35.00 all wool white cloth suits for only \$7.95. Investigate.

Wash Lawns

For neat, cool summer frocks—'tis the time now to wear these. You can supply these wants now at a great reduction during our Remodeling Sale.

LOT ONE

Includes Lawns worth from 8 1-3¢ to 12 1-2¢ in neat designs and floral patterns; all colors. Remodeling Sale..... 5¢

LOT TWO

An assortment of Lawns and Batiste of all colors, patterns and designs; some Dimities, worth from 15¢ to 20¢ the yard. Remodeling Sale..... 10¢

LOT THREE

Takes in a vast assortment of wash materials of the sheerest type, of Batiste, shadow stripes and checks. Organadies in neatest of patterns of all colors; worth from 25¢ to 40¢ yard. Remodeling Sale..... 14¢

25¢ MALINE 15¢

Maline, so much used for mid-summer millinery purposes; a full line of colors to choose from. Remodeling Price..... 15¢

AUTO VEILS

\$3.00 Auto Veils, Remodeling Price..... \$2.39

Funds Secured for Drinking Fountains

Subscriptions for the public drinking fountains have been coming in rapidly and the list published here is practically complete. The collections are not all in yet, and there still may be a few more donors. Exceptions to the one dollar subscription were made in the cases of Mrs. W. F. Matlock and James Johns, Sr., the former giving \$5 and the latter \$10 to be used toward securing a fountain at Court and Main streets. The only other gentleman donating was Edmund Mable, local manager of the Pacific Telephone and Telegraph company.

Local contractors are now working on plans for the fountains and the

committee in charge of the work hopes to be able to make selections this week. It is expected there will be sufficient funds to install more than three fountains, if this is considered necessary, or to use any surplus toward a handsome civic fountain to be erected in the proposed park near the depot grounds.

The Civic club wishes to thank each contributor and all those who have assisted in the work of securing public drinking fountains for the city. All contributors are entitled to a membership in the civic club for a year.

MAN'S BODY IS JUST A MACHINE

ANATOMY WORKS LIKE ANY OTHER ENGINE

Instrument Used to Tell How Much Food is Necessary to Keep the Bodily Machinery in Good Form—Energy is Measured—Government Makes Investigation.

Washington, June 2.—Man is just a machine. If you do not believe it, ask the federal department of Nutritive Investigation, a part of the Bureau of Chemistry. Dr. C. F. Langworthy, who is chief of the department, will tell you, and give facts and figures to prove it, that your anatomy is just like any other engine. You have a maximum capacity of so many foot-pounds of energy, and to generate this, a certain amount of fuel is necessary. The best kind of food or fuel to be used varies with the individual engine, and Dr. Langworthy today told how his department does its work.

He described his unique department in his workshop, surrounded by an endless series of laboratory instruments, ovens, graduated scales, and queer tubes and pipes where everything under the sun is concocted and cooked up, to see how many calories, how much nitrogen and how much energy it will give the human body when it's eaten.

In the laboratory is a respiration calorimeter, a chamber in which Uncle Sam's scientists put subjects to measure the energy which the subject gives off while he is engaged in different tasks, and while fed different diets of food. When the Bureau of Chemistry sharks decide that it will be a matter of national import to know just the modicum of energy that a diet of stewed beef, bread, beans and radishes generate, while a man is using his muscles, they feed their subjects, put him in the calorimeter, set him to work pedalling something that looks like a bicycle, and then stand around and watch the dials and thermometers. Incidentally to discover the amount of energy on the same diet that a man engaged in hard work gives off, they get a subject who has a particularly brain puzzling task to perform and watch him. The last subject was a college student who had to pass a very rigid examination. He spent a couple of days in the calorimeter, alternately studying and resting. When he rested, he lay upon a couch at ease and read if he wanted to, or just dozed. At all times the scientists watched the little thermometers, taking copious notes.

The calorimeter is a valuable instrument in many ways. It enables the government to recommend certain diets as being of the greatest use to men and women in different occupations, and it enables them to recommend a combination of foods, that are cheap, but at the same time, sustaining.

The apparatus itself is six and a half feet square and of the same height. There is a window in the side to permit light for reading or studying, a couch to permit the subject to lie down, a pipe through which air enters and another through which it is expelled. The expelled air is caught and its components analyzed, for part of the food you eat is expelled with every breath.

The heat given off by the subject's body is weighed and measured, and then carried off through a brass pipe that has a current of cold water running through it. The heat absorbing power of the pipe is enhanced by a series of copper disks that are soldered to it. The method is merely the reverse of that practiced in bringing heat into a room by the hot water method. In one, the cold water carries it away; in the other the hot water brings it in. The exact amount of heat expelled from the subject's body is measured by the flow of cold water, one calorie of heat being necessary to raise 1 kilogram of water one degree centigrade.

"Important discoveries have been made through the respiration calorimeter," said Dr. Langworthy today. "It has been determined definitely just how much food is needed to supply the normal body with energy enough to permit of great mental and physical labor. To every one calorie of heat given off by the body it is necessary to eat five calories of food. Mental work, it has been discovered, results in as much loss of muscular energy as muscular work itself."

HIGH WATER IS STILL A MENACE

Wallowa, June 2.—Continued rains and warm weather is still causing Bear creek and Wallowa river to rise rapidly. Already these streams have passed a height not equaled for over four years. Several bridges on each river have been washed out and other important ones are badly threatened. If the warm weather continues much damage may result. Several families have been forced to leave their homes on Bear creek, although the water has done no great damage as yet. The Wallowa river has spread beyond its banks in several places in the valley but it will take a considerable rise to cover much farming land. Again today the O.-W. R. & N. train did not arrive in Wallowa until many hours after schedule time. The crew encountered several large slides and a dangerous washout. The storm which raged in Wallowa canyon Monday and Tuesday was one of the worst recorded in that section. The rains, together with the warm weather which is bringing down the snow, has raised all the creeks in the county and the river has become a raging torrent.

Best Laxative for the Aged.

Old men and women feel the need of a laxative more than young folks, but it must be safe and harmless and one which will not cause pain. Dr. King's New Life Pills are especially good for the aged, for they act promptly and easily. Price 25c. Recommended by Koeppens.

AMUSEMENTS

The Orpheum.
Extra, extra! Midnight Bell. A Selig masterpiece in two reels for Tuesday's change.

A Midnight Bell. Selig. Two reels. A masterful adaptation of Hoyt's famous rural comedy that in its day delighted thousands. Produced with a cast of prominent players. Two reels of good clean comedy. One of the best features of the year.

If We Only Knew. Biograph. A story of a child's importance in the home. A careless nurse girl allowing the child to wander away made the mother realize the poignancy of the verse:

"If we only knew the baby fingers
To generate against the window pane;
Would be cold and stiff tomorrow—
Never trouble us again—
Would the bright eyes of our darling
Catch the frown upon our brow,
Would the prints of rosy fingers
Vex us then as they do now?"

Horatio Sparkins. Vitaphone. Featuring Flora Finch and Courtenay Foote. A coronet-hunting mamma receives a severe shock. A dry goods clerk has a good time and almost gets a girl.

The Pastime.

The home of good pictures. Program for Tuesday's change includes a big two reel special.

Extra! Extra! "The Artist's Great Madonna." Vitaphone. Two reel special. Featuring Miss Lillian Walker. An artist's ambition to paint the greatest of all madonnas, searches the world over for a suitable model. One escapade follows another. The object of his search is almost within his grasp a dozen times. Finally he returns home, heavy of heart and broken in spirit, and there to his great astonishment and joy he finds his Madonna. Mr. L. Roger Lytton as the artist, Mrs. Julia Gordon as Maria, Miss Rose Tapley as Suzette and Mr. Robert Gallard as Jim Townsend do excellent work.

"A Splendid Stapegrace." Edison. A picture that is kept very convincing by the sincere acting of all concerned. Marc MacDermott is perfect as the splendid scapegrace.

"The Hash House Count." Kalem. "Toothache." A comedy.

Cosy.

Monday and Tuesday, a two reel Philippine war drama, "The Honor of the Regiment," 101 Elson. The opening scenes are taken at the Presidio, San Francisco and the scenes following are in the Philippine Islands. The natives in skirmish fights with the Americans furnish a thrill; the ambush of the soldiers was well devised; the plot is a good one and the whole offering is strong. This is an absolutely first run picture; you never saw this one before anywhere.

"He Ruins His Family's Reputation." Eclair. Another "Newlywed" scream, with "Snookums" and papa and mamma Newlyweds as natural as life. This film is also first run.

"The Honeymoon Lodging." Champion. Renting the same room to more than one person at the same time, got all hands involved in a general mix-up which makes laughs.

"All on Account of an Egg." Eclair comedy.

CITY TO CHARGE

Baltimore.—The board of estimates announces the city intends to collect from \$80,000 to \$120,000 a year as rent from state offices in the court house which have heretofore paid nothing for the use of the rooms they occupy in the building.

Those to be affected are the register of wills, sheriff, state's attorney, who already pays rent, and the clerks of the courts, who make returns to the state.

It is one of the administration's places for increasing the city's revenue and getting back from the state some of the money the city is obliged to turn over to it every year.
