Church Sells Liquor.

PANAMA MAKES A NEW CONTRACT FOR HIPPODROME

PANAMA CITY.—Much value is expected to accrue to the properties in this vicinity by the proposed new hippodrome, the contract for the building of which has been signed between Ramon F. Acevedo, the secretary of fomento of the Panamanian government, and Albert J. Froehlich.

The hippodrome will probably be built at Las Sabanas, but the exact location has not been decided. All materials necessary for constructing the building will be admitted free of taxation. The Panamanian government is to receive from the concessionaire annually a tax of \$200 for the first three years, and \$5000 a year for the remaining seven years provided for in the contract.

The hippodrome will be used for athletic contests, horse, bicycle and automobile races, fairs and like entertainments. The concessionaire is to have the fixing of the entrance fee, subject to approval by the government. A similar contract had been approved by the former administration but it was invalidated by an act of the national assembly which authorized the executive to seek more advantageous terms. The differences from the other are: First, that the government is to receive annually double the amount of money of that agreed upon by the former administration; second, the concessionaire is to commence the work six months after the signing of the contract instead of one year, and third, that the concessionaire is to deposit in the national bank a guarantee of \$500 instead of a smaller sum.

Line the bottom and sides with baste board, such as from cracker box, and pack the bottom tight with excelsior. Place the vessel to be used in the center of the box and pack the excelsior as tight as possible around it, remove the vessel and line the opening with paste board, cutting a hole in the top strip to fit the vessel. Take a strong board for the lid and line it with packed excelsior covered with cloth. Or a pillow or cushion may be used under the lid, which is made as nearly air tight as possible. The top padding should be thick enough to make it difficult to close the lid, which is held
