M. E. Miller one of the candidates for labor commissioner, made his campaign with pictures of factory buildings in full operation.

STORIES DAMAGING PROJECT ARE REFUTED IN REPORT

(Continued from page one.)

"The men to whom I talked for the most part told me that on beginning their work on the project they knew nothing of irrigation, that their work had been much of it wasted on that account, and that their improvements could be made by them now, if beginning again, more efficiently than they were made, and at a cost of not to exceed fifty per cent of what has been put into them. It seems to me that the difficulties of the project are, in the main, due to the fact that the settlers were in general not prepared to handle the land at the time they went onto it. This, both on account of lack of knowledge and on account of lack of financial resources. In no part of the United States, and especially in no section where land has to be reclaimed from the waste, can a homesteader expect to go onto raw land and make a living from it from the start.

Sandy Hill Area.
"The sandy hill section, about which there has been the most discussion, was gone over with particular care, visiting both before and after the rest of the project had been seen. The sandy hill consists of about twenty-seven hundred acres, but of this area there are water rights on only fourteen hundred acres, (these figures furnished by the project engineer).
"The settlers on the sandy hill are some of them quite well established

and apparently have their places close to an income basis; others have only recently started or have done little development work, and are still decidedly in the investment stage. This section of the project is considered by the people on it, and by many others with whom I talked, exceptionally well adapted for fruit and berry growing. Both berries and fruit are doing well where given proper care, and while the trees are very few of them old enough to bear, they look quite healthy and are growing well, and berries are producing heavily. The term "hill" is somewhat of a misnomer as the elevation is only about fifty feet greater than the average of the project.

Problems to Be Solved.
"The problem in this 'Sandy Hill' section is, and of necessity must continue for some time to be, the water supply. The land is sandy, though not materially more so than portions of the project elsewhere, but it is underlaid with a coarser sand and until the soil disintegrates by the action of water and sun and is built up by fertilization and the addition of humus, the water drains off to such an extent that an excessive amount is required. However, on one of the sandiest portions of it I saw a stream from a lath pipe about an inch in diameter running from a small ditch by the side of a tree row and carrying water in that ditch for a distance of about 150 feet. The settler told me that when he began to work the land the water would not have run more than 25 feet before disappearing entirely, and he ascribed the difference now to the fact that he had plowed under two crops of rye, and the further fact that the land had been irrigated for three years and the soil had disintegrated and broken up in the process.

"This section being higher is freer from frost than the surrounding country, and to that extent has an advantage in fruit and berry culture. It is absurd to say that the soil of this sandy hill is generally infertile. Soil can not be classed as 'infertile' which is producing, and producing well. Alfalfa on this land is not usually as good as alfalfa on the lower levels, but this, in my opinion, is not due so much to the quality of the soil as to the fact that on account of the sub-surface conditions above mentioned, a large amount of water is required to irrigate it properly. This necessitates more work in applying the water, and as a consequence the crop in most cases suffers.

Financial Condition.
"A considerable proportion of the settlers in this area are homesteaders. They came onto the land with, on the average, less money than their neighbors on patented land. They also have more difficulty in securing adequate credit to stock up their farms and to aid in developing them and get them on an income basis, for the reason that they have not complete titles to their farms. Depending, for the most part, upon their own efforts to level their land and prepare it for irrigation, and at the same time, getting their land set to fruit has necessarily made development work slow and difficult. A homesteader should be in a position to put back onto the land a large part of what he takes from it during the first few years of his work upon it. Progress is especially slow in a fruit district, such as this one is.

Conclusion.
"It seems to me that the crops growing on this land at the present time disprove as conclusively as is possible the allegation that the land is, to any considerable extent, 'infertile,' and the experience, both here and elsewhere, is that as the land is cultivated and crops grown on it from year to year, it will become more fertile."

"The farmers on the project are, for the most part, doing well and it is doubtful if there is a less percentage of failures or cases where men are having extreme difficulty in making ends meet in any section of the state. The cashier of the Hermiton bank told me that he had lent \$15,000 in the past eighteen months to farmers on the project to buy cows, and that the notes were all being taken care of and that he has not had to

Planning for the Stork's Arrival

Among those things which all women should know of, and many of them do, is a splendid external application sold in most drug stores under the name of "Mother's Friend." It is a penetrating liquid and many a mother tells how it so wonderfully aided them through the period of expectancy.

Its chief purpose is to render the tendons, ligaments and muscles so pliant that nature's expansion may be accomplished without the intense strain so often characteristic of the period of expectancy.

At any rate it is reasonable to believe that since "Mother's Friend" has been a companion to motherhood for more than half a century no more timely advice could be given the inexperienced mother than to suggest its daily use during expectancy.

Ask at any drug store for "Mother's Friend," a penetrating, external liquid of great help and value. And write to Bradford Regulator Co., 302 Lamar Bldg., Atlanta, Ga., for their book of useful and timely information to expectant mothers. It contains many suggestions that are of interest to all women.

Can't Keep It Secret.
The splendid work of Chamberlain's Tablets is daily becoming more widely known. No such grand remedy for stomach and liver troubles has ever been known. For sale by all Dealers.—Adv.

Two Bodies Identified.
ASTORIA, Ore., June 12.—The body of Mike Cardson, a fisherman who was lost a week or so ago off Sand Island, and the body of Lee W. Price, were found, the former partly buried in the sand on Sand Island and the latter on Columbia beach, just below the hotel. Price was a member of the coast artillery and was one of the two men lost when the mine planting launch foundered off Fort Stevens some time ago.

Federation Honors Ex-Officials.
CHICAGO, June 12.—Suffragists from all over the country in session here, will hold the big social event of the meeting, Mrs. Percy V. Penny-packer of Austin, Tex., 1913, president of the General Federation of Women's Clubs, and other retiring officers, are to be guests of honor at a monster banquet and reception at the Art Institute.

Accuses Former Husband of Imprisoning Her in Asylum.
Mrs. Elizabeth Holman, wife of Frederick Ernest Holman, of Waterville, Me., who is suing for \$50,000 damages her divorced husband, the Rev. Cranston Brenton of Yonkers, and Doctors Oliver C. Smith and Paul Waterman, prominent Hartford physicians. The case is being tried at Hartford, Conn. Mrs. Holman charges that her incarceration in a Brattleby, Vt., "madhouse" was the result of a plot concocted by Brenton

Our June White Sale NOW ON

Pendleton's biggest and best department store. WE GIVE S. & H. GREEN STAMPS.

Wedding Records Mixed.
SAN MATEO, Cal., June 12.—Mrs. John F. Barrett and Mrs. Robert D. Savage, sisters married at a double wedding in January, returned from their honeymoon trips and learned that, according to the county clerk's records, Mrs. Barrett's legal name was Mrs. Robert D. Savage and Mrs. Savage's name was Mrs. John F. Barrett.

The marriage licenses were confused at the time of the wedding, and technically the two girls, who are the daughters of Supervisor James T. Casey, were married to the wrong men.

China Leads at Canal Show.
SAN FRANCISCO, June 12.—China will have the largest display of any foreign nation at the Panama-Pacific exposition, according to an announcement by Thomas G. Stallamith, department commissioner. China has appropriated \$1,500,000 for its exhibit. An announcement said the avenue of concessions will be styled "The Zone" and not "El Camino," as first agreed upon.

Weak Heart

Many people suffer from weak hearts. They may experience shortness of breath on exertion, pain over the heart, or dizzy feelings, oppressed breathing after meals or their eyes become blurred, the heart is not sufficiently strong to pump blood to the extremities, and they have cold hands and feet, or poor appetite because of weakened blood supply to the stomach. A heart tonic and alterative should be taken which has no bad after-effect. Such is

Dr. Pierce's Golden Medical Discovery

which contains no dangerous narcotics or alcohol. It helps the human system in the constant manufacture of rich, red blood. It helps the stomach to assimilate or take up the proper elements from the food, thereby helping digestion and curing dyspepsia, heart-burn and many uncomfortable symptoms, stops excessive tissue waste in convalescence from fevers; for the run-down, anemic, thin-blooded people, the "Discovery" is refreshing and vitalizing. In liquid or tablet form at most drug stores or send 50 one-cent stamps for trial box to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y. Read Chapter VII on Circulatory Organs in the "Medical Advice"—A French detached book of 100 pages sent on receipt of 31 one-cent stamps, address as above.

Studebaker
ECONOMICAL LIGHT WEIGHT **SIX**
\$1700
F. O. B. Pendleton

There is more car value in the Studebaker Six than in any other "Six".

Because we manufacture a larger proportion of its parts than any other manufacturer produces for his car. Every piece of steel used in it is made by a special Studebaker formula, and all parts are heat treated from two to four times during manufacture.

We actually create greater value in the Studebaker light-weight SIX'S parts than the makers of assembled "Sixes" can buy.

We can afford to embody highest quality in each of its parts because Studebaker builds 50,000 cars. Each car carries only one fifty-thousandth of the Studebaker overhead expense.

We are content with a smaller manufacturing profit per car, because our large production evens matters up.

Send for the Studebaker Proof Book, describing Studebaker manufacturing methods.
