Changing Glasses An Admission of Incompetency.

A normal eye can see distant objects as well at 60 or 70 as at 10 years. If your eye has been made normal with a "correct" glass, why should it be changed. In Pendleton and vicinity we have five hundred patrons who are absolutely guaranteed that they will never have to have their glasses changed except for the reading distance. We are here to make good. Is it economy or good policy to buy glasses and eye testing that will answer the purpose for a few months or possibly three or four years? **D. N. REBER, M. D.** Eye, Ear, Nose and Throat Specialist. Schmidt Building, Pendleton, Ore.

IF YOU HAVE FREQUENT HEAD-ACHES WHICH MEDICINES DO NOT CURE;

if you see distant objects more (or less) clearly, or need to hold printed matter nearer to or further from the eyes than formerly; or need more light. If you have observed any of these things, your sight needs the aid of correctly adopted glasses to assist as well as preserve it. Accurately fitted glasses are only possible when the sight has been scientifically tested. We have every facility for doing this and exercise the greatest care so that you may receive the utmost benefit from wearing glasses. A thorough examination and explanation of your condition will cost you nothing. **W. H. HILL** Optician With Wm. Hanscom, Jeweler.
