OCEAN TO OCEAN RECORD BROKEN

By HUDSON SUPER-SIX

Broken by 15 Hours

The Winner of a Hundred Records Wins the Greatest One of All

The most coveted record in America has always been the Transcontinental Record. Five years ago a car became famous by making the trip from San Francisco to New York in 10 days and 15 hours. Last May, in glaring headlines, the newspapers announced a sensational record of 7 days, 11 hours and 53 minutes—made by a famous Eight. That record—then considered unbeatable—was later beaten by another car.

And now the Hudson Super-Six makes the trip in 5 days, 3 hours and 31 minutes. Breaking last Spring's best record by more than two days. Breaking the best record made since then by 14 hours and 59 minutes.

The Winner in Every Test

The Hudson Super-Six has now won every record it has sought.

It has won every stock car record from one to 100 miles. It has made faster speed with a stock motor than was ever made before—192.56 miles per hour.

It has broken all records for 24 hours—1819 miles. That is 52 per cent faster than any stock motorized car ever went in that time before.

It won the Pike's Peak Hill Climb—the greatest hill-climbing test ever held—against 20 great cars specially built for the climb.

And now, as a crowning achievement, it breaks the record which means more than all—the Transcontinental record.

All Due to Endurance

The Hudson Super-Six now holds all important records. All the records save those made with special racing cars, such as buyers never get. And practically all of those records have been won by the Super-Six endurance. Cars with more power and cars with more speed have sought for nearly all these records. But the Super-Six won because it kept its pace. In test after test the Super-Six has been the only car that did not stop.

In this ocean-to-ocean trip of 3476 miles, across mountains and deserts—mounting at one time two miles above sea level—the Super-Six averaged for the whole trip 28.14 miles per hour. Yet it went through 359 towns and cities under speed restrictions.

Friction Almost Nil

That is the great fact about the Hudson Super-Six. Its chiefest supremacy lies in endurance. The Super-Six invention added 80 per cent to our motor's efficiency, solely by reducing vibration. It reduced motor friction almost to nil.

By nearly ending friction it has nearly ended wear. And all these world's records are due mainly to that fact. The motor is small and light. It is similar in size to scores of light sixes. But the Super-Six invention has made it 80 per cent efficient. It has made it fully twice as enduring.

You will never want your car to do what the Super-Six has done. But you do want the car which shows this endurance. And every month's use will increase your regret if you fail to get the Super-Six.
