IF I HAD KNOWN.

If I had seen that home from which he came, there, cheerless, dread and darkly desolate, I should have had more charity—oh, shame that I should turn him friendless from my gate!

If I had known his yearnings for the good, and how he fought his losing fight alone, if all his doubts I had understood, I should have stayed his steps—if I had known.

I did not know, and when the tempter came, speaking with evil questions in his heart, he faltered fell, I was the one to blame— I, who had failed to act a brother's part.

—Marion Bernice Craig, in the Christian Herald.

THE SAFETY VALVE IS OPEN

In viewing the Russian situation we must remember that we now hear the facts about Russia; formerly we did not because of the old government's censorship. The change in the news service from Petrograd makes it difficult to correctly appraise the disturbances now going on. Conditions may be no worse than they have been—perhaps not as bad in some ways.

Regardless of alarming news from Russia the East Oregonians venture the opinion that the new republic will stand fast by the cause of the allies. If for no other reason this will occur because Russia cannot gain peace by herself. To make a separate peace with Germany would mean to invite war from the allied nations. It would mean war on Russia by Japan and China. Making peace in the west Russia would have to make war in the east. She would but swap a failing enemy for an enemy that grows stronger daily. It would be a bad bargain indeed for the Slavs.

These facts must be apparent to all educated Russians, be they supporters of the duma or not. Therefore the idea that Russia may desert the allied cause seems incredible. Too much importance should not be placed on the reports of trouble at Petrograd. The safety valve is open in Russia now and noisy though it may be the boiler should be the safer for the change.

WHERE WE ARE NEGLIGENT

REGON'S quota under the selective service law will be 5400 men. It is a fewer number than we have already sent into the national service. Our third regiment alone, recruited to war footing, has nearly half that number.

To be plain about it the first draft is going to take a small percentage of men of military age. What the future necessity will be no one can forecast, but at the earliest it will

be many months before a second draft is called. Oregon can provide her quota of men without any noticeable embarrassment to business or industry. The same will be true of other states. The United States can have a million men under arms and still leave 99 per cent of the population at home. As far as we know a million men may be all we will need. The facts are mentioned because they show that from the standpoint of men we are going to meet the war situation without trouble. Whatever number may be required they will be forthcoming even if it takes 10 million. But in food production the conditions are not as rosy. We are neglecting many opportunities for service despite the fact that food production promises to be more important than bayonets in deciding the future of the war.

PROGRESS AGAINST SUBMARINES

GUARDED statements by Secretary Daniels and other navy officials as to the progress being made towards a solution of the submarine menace are none the less reassuring from the fact that precautions are taken to prevent too much optimism. They indicate that if the remedy has not already been found it is near at hand. The public was inclined to discount the first announcement of Chairman Saunders of the Naval Consulting Board. The feeling was general that, if the way had been discovered, military prudence would keep the fact secret. Anything like adequate information is still wanting, but the authorities have lifted the veil enough to show they are convinced they are on the right track.

A mechanical contrivance by Elmer A. Sperry, inventor of the gyroscope compass, is believed to figure importantly in the solution. Sperry's own attainments are sufficient warrant that whatever he has suggested is worth while. All eyes, too, are turned to the laboratory where Edison has secluded himself, according to his custom when bent upon an important task, and from which he sent word that he was too busy to see the distinguished commissioners from France and Great Britain. Whether the submarine is to fall before mechanical devices or through some plan of action is still a matter of pure conjecture. Probably it will be a little of both. Nevertheless no one familiar with American genius can doubt that it will accomplish the undertaking to which it has devoted itself.—St. Louis Post-Dispatch.

Meanwhile it may be well to go slow on our organizations for the relief of Belgians, Armenians, Syrians etc.; no one knows who gets the money given for such purposes and that same assistance may be needed by families in the United States next winter.

Cloudbursts seem to be the order of the day in eastern Oregon; old Jupe forgets that this is May.

28 Years Ago Today

(From the Daily East Oregonian, May 14, 1888.)

C. R. McConnell of Pendleton was made happy Sunday evening by the presentation by his wife of twins, a boy and a girl.

A bucking cayuse in the Depot Stable yard brought out nearly the entire town today. He was saddled ready for his rider but for the way he humped himself afterwards and endeavored to convert his body into a circle like a circus contortionist the cowboy concluded he had best remain on terra firma and break the animal with a club.

Governor Miles C. Moore passed through town this morning enroute for his home at Walla Walla from Olympia.

Orrville White and A. G. Anderson now claim the palm as fishermen; they were out all day yesterday and returned with 127 beauties which well paid them for the impromptu bath they were compelled to endure during the thunderstorm.

W. W. Hoper has started the good work by chaining a wrench to the hydrant near his shop, so that in case of five previous minutes may not be spent in hunting for that article.

One views with more or less alarm the advances in the price of grain.

LUCKY STRIKE

cigarette

It's

toasted

THINK of a cigarette "served" to you as appetizingly as the hot, buttered toast that comes to your breakfast table.

Well, that's the idea on this new Lucky Strike cigarette: the tobacco—it's toasted. There's a thought to make your mouth water for a new cigarette flavor.

Until we discovered the toasting principle, a good ready-made cigarette from Burley tobacco wasn't possible; flavor wouldn't hold.

Yet there was the big million-man-power affection for Burley—60 million pounds poured from those green, blue and red tin boxes last year.

The old kitchen stove—the toasting fork

So we worked five years—then came the big simple idea of toasting the tobacco to hold the flavor. Now, enjoy a really delicious new cigarette flavor: Lucky Strike—the real Burley cigarette—it's toasted.

Daily Chats With the Housewife

AN OUNCE OF MEAT.

"Many a Mickle Makes a Muckle." WASHINGTON, May 10.—An ounce of edible meat—lean meat, fat and lean, set or fat trimmed from steak, chop or roast—brings hardly worth saving.

Many households take just this view of the matter—do not trouble to put such an insignificant scrap into the ice box or soup pot—do not bother to save for cookery a spoonful or two of drippings or a tiny bit of meat or fat.

Yet if every one of our 26,000,000 American families on the average wastes each day only one ounce of edible meat or fat, it means a deluge of 2150,000 pounds of edible meat or fat. It means a daily waste of 1,250,000 pounds of animal food—425,000,000 pounds of valuable animal food a year.

At average dressed weights, it would take the gross weight of over 575,000 steers, or over 3,000,000 hogs—bones and all—to provide this weight of meat or fat for each average family or kitchen sink. If the bones and butcher's waste are eliminated, these figures would be increased to 1,150 cattle and 3,700,000 hogs.

Or, again, if the waste were distributed according to the per capita consumption of the various meats (excluding bones), it would use up a combined herd of over 535,000 beef animals, 291,000 calves, over 625,000 sheep and lambs, and over 2,132,000 hogs.

Millions of tons of feed and hay, the grass from vast pastures, and the labor of armies of cattlemen and

butchers also would be scrapped by this meat-waste route.

But—every household doesn't waste an ounce of meat or fat every day? Very well—make it one out of a hundred families, but keep in mind that all meat allowed to spoil and all meat and fat rendered inedible by improper cooking, scorching or burning must be counted as waste. Make it an ounce every other day or once a month. Such waste still would be considerable, when meat is scarce and when fat is of such vital food importance to many nations.

Waste of meat or fat is inexhaustible. Every bit of lean meat can be used in soups, stews, or in combination with cereals; every spoonful of fat can be employed in cookery; every bit of drippings and gravy can be saved so easily and used to add flavor and nourishment to other dishes.

The U. S. Department of Agriculture, Washington, D. C., or State Agricultural College will tell you how to use bits of meat to make appetizing and nutritious dishes and how to use left-over fat in cookery.

Treat The Body As A Delicate Machine

You would not let a machine built for efficient work get rusty and full of dust and dirt. Why let the body, the most delicate of all machines, get rusty and run down from inattention? Cleanse the blood; that's the secret; keep it clean. S. S. S., proven for 50 years the best of all blood tonics, will do it. Get a bottle at your druggist's TODAY and take it according to directions.

SWIFT SPECIFIC CO., ATLANTA, GA.

S.S.S. Keeps It Always Fit
