

THE CARE of Your Car

Unless the care of your car is a hobby with you it ought to be entrusted to those who make good care of cars their business.

If you haven't the time—we have. If you haven't the facilities—we have.

Your car will be OUR car while left in our care.

CAR AND VACATION BECOME SYNONYMOUS

That automobile owners will use their cars to a greater extent than ever before on vacations this summer is the observation of Wallace Brothers distributors of Studebaker cars, who say:

The old idea of leaving the car at home when going on vacations and depending on railroads is passing out. The change in attitude among automobile owners is due to the fact that they have a much larger appreciation of the convenience and reliability of their cars, as well as the greater number of users to which they can be devoted.

Today, instead of hopping on a railroad train, traveling to a summer resort and lying around for the period of a vacation, the motor car owner uses his car every day while on his vacation, driving up and back in it, and making side trips of many miles out of the place where he is spending the vacation days.

It is surprising, too, how many owners are rigging up their cars in general for purposes of actually living and sleeping in them at night. It is not an uncommon sight any longer to see cars equipped with tents, poles, cooking stoves and all other essentials for camping out.

During the summer, in this day and age, the automobile is used by families to an unprecedented extent for week-end jaunts out into the country, trips to the golf links and on fishing and hunting expeditions.

Studebaker owners are finding that their cars have possibilities which they never figured on in former years, and these same owners are getting a great deal more mileage out of their machines each year than they formerly did, imbibing plenty of fresh air and making themselves more efficient in their work.

SQUEAK AND RATTLE ARE DRIVER'S BANE

"Nothing so grates on the nerves of automobile drivers and passengers as a car body that squeaks with each road bump or jolt and interrupts conversation with rasping squeaks or rattles," says J. E. Saylor, manager of the local Overland agency.

"The new Overland body construction has been one of its great sources of popularity with the buying public. In the construction of this body, thick, high-grade steel is thrust into giant pressing and stamping machines and is removed from the dies in varied and interesting shapes.

"One piece of steel has become the shell of a door. Another steel plate takes the form of the tonneau. The curved top of another steel shell indicates its purpose as the back of the driver's compartment.

"Each of these pressed and stamped forms is assembled and welded together. By this process the various parts become a single unit. There are no bolts to work loose, and no screws to pull out. The welding process makes the new Overland body an all-steel, one-piece unit with not a chance of a body squeak or rattle.

"The rest of the construction and upholstery is of the same quality. Added to this is a paint job not possible with any but all-steel body. A body with wood in it would not stand the extremes of heat and steam to which this body, in the painting process, is subjected.

"In this painting seven distinct operations in electric ovens of 450 degrees heat are required. In this intense heat the enamel is baked on lustrous, hard and permanent."

YOUTHFUL BANDITS BIND CASHIER AND FLEE WITH \$1500

OMAHA, July 10.—Two youthful bandits today held up the bank of Waterloo, Nebraska, bound and gagged the cashier, robbed the bank of \$1500 and escaped in an automobile.

MOLASSES IS MAKING FUEL FOR MOTOR CAR

Hall to lowly and sticky molasses! From it is being produced "motor alcohol," a substitute for gasoline.

Discovered by J. P. Foster, chemist of one of the big sugar plantations on the island of Maui, Hawaii, production within the next three months will be sufficient to furnish fuel for all cars on the island should a gasoline shortage occur.

According to the first reports of the new fuel, brought to San Francisco by District Manager F. B. Carroll of the

Goodyear Tire & Rubber Company of California, "motor alcohol" gives more power, greater mileage, easier start-up and more freedom from carbon than gasoline. It can be used without an adjustment of the carburetor.

The new fuel is performing in automobile, marine, stationary, truck and tractor engines. In a 36 hour test made with a 75 horsepower tractor the consumption of "motor alcohol" was four gallons an hour compared to four and a half gallons of gasoline in the same engine on the same work. Examination of the cylinders showed most of the old carbon deposit removed and the remainder so soft it could be removed with the fingers.

Sugar plantations have been letting their molasses run to waste or burning it for the potash recovery. Nitrogen and phosphoric acid are also valuable by-products of molasses. Now, however, production of the new fuel is found to be more profitable than obtaining other by-products.

At present there is enough molasses available to produce 3,000,000 gallons of "motor alcohol," enough to supply all automobiles in Hawaii. Development of this industry will release shipping space formerly used for transporting gasoline from the United States.

BAN READY MADE CIGARETTES

(By Associated Press)
MISSOULA, Mont., July 10.—The ready made cigarette is banned and those who desire may smoke only the "makin's" in the national forest near

hear this year. This is the ruling which the forest service headquarters of District One here has sent out to all forest workers. It is contended that the long burning "butt" of a manufactured cigarette is a marked fire hazard, while the smokes of those who "roll their own" are not.

AEROTYPE PRINCIPLES SAVED COLE WEIGHT

By adapting aerotype principles of engineering to its Aero-Eight models the Cole Motor Car company has successfully solved the problem of obtaining abundant strength without bulky weight.

Only the proper synchronization of all units such as is found in the airplane made this achievement of Cole's possible. Weighing but 3500 pounds, the Aero-Eight is possessed of the strength and stamina of a sea-plane. Its perfect balance enables it to adhere to the road under all conditions and at high speeds. At the same time this balance contributes materially to its economic operation and its uniform efficiency.

In the Aero-Eight the sensation of speed is reduced by half. Racing along at sixty miles an hour, this car seems to be traveling at the rate of thirty miles an hour; at forty miles it seems to be going but twenty, and at lower speeds it moves so smoothly that the motion is hardly perceptible. This may be traced to the elimination of the annoying side-ways and to the shock-absorbing qualities of the mechanically perfect frame.

The swift pick-up of the Aero-Eight is a revelation to those riding in it and a source of keen satisfaction. From a standing start the Aero-Eight will accelerate to fifty miles an hour more rapidly than any other car so far officially tested. Particularly in these days of congested traffic this charac-

A RECORD THAT SHOULD CONVINCE YOU

Of the merits of Hood's Sarsaparilla as the standard blood purifier, appetizer and tonic. Originated in a famous physician's prescription more than 50 years ago. Adopted as the regular family medicine in thousands of American homes. Has met the tests of a half-century with universal success. Made from the best known roots, herbs, barks and berries named in the Dispensatory. Will prove its merit to you if you will give it a trial. As a good cathartic, Hood's Pills.

Willard STORAGE BATTERY SERVICE STATION

Copyright registered, 1918

A Battery—or THE Battery

You can buy a battery anywhere.

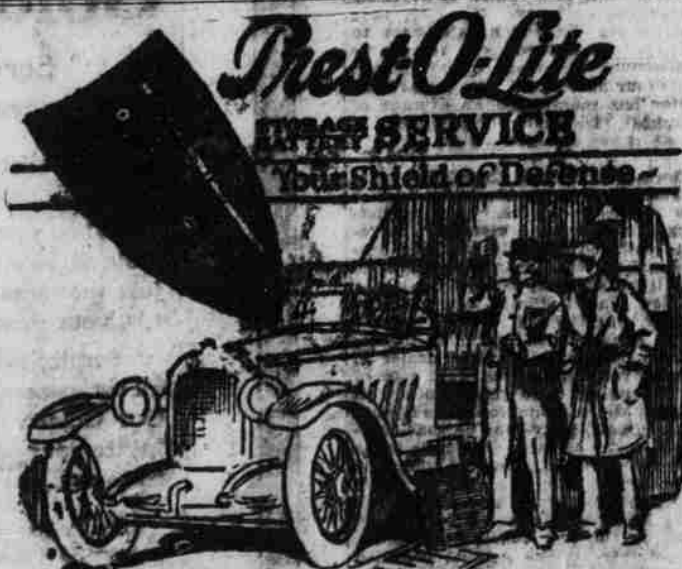

You can buy the battery in only one place—from the Willard Service Station.

The Still Better Willard is the battery because it is the only battery in which you can get Threaded Rubber Insulation—the most important battery improvement in years.

You'll know the Still Better Willard by the Willard Mark which is branded in the box. The booklet "A Mark with a Meaning for You" tells all about the Mark and the Battery.

Electric Service Station

Prest-O-Lite SERVICE

Your Shield of Defense

Prest-O-Lite Service Prevents Costly Repair Bills

YOUR storage battery should be tested regularly. Perhaps it needs repairing—who can tell? There's one sure way to find out.

Call and let us test your battery today. Should a test indicate the necessity for repairs, we have a service battery for you to use while the work is being done. You have the continuous use of your car. When your battery is ready we will notify you promptly. You will be extremely surprised at the moderation of our charges in these days of high prices.

AUTOMOTIVE BATTERY SERVICE CO.

PAINT—It's Like Bread; there is as much in the making as from what it is made

Take two women—your wife and your neighbor's, for example. They both use the same flour and yeast. Both bake bread in the same kind of oven for the same length of time.

Your wife's bread invariably turns out best. Why is it? It's in the making—her way of making it.

It's exactly the same with paint. The list of materials from which it is made is only half the story—hardly that.

Painters and home owners have learned that the difference in its making is one of the big things that makes Lowe Brothers High Standard the dependable paint it is.

This also has much to do with its

lastingness. It is one of the main reasons for its splendid covering qualities—for its economical spreading properties.

We recommend this good paint to you because we know it will give you satisfactory service.
